(54) Title: FUSED CYCLIC MODULATORS OF NUCLEAR HORMONE RECEPTOR FUNCTION

(57) Abstract: Fused cyclic compounds, methods of using such compounds in the treatment of nuclear hormone receptor-associated conditions such as cancer and immune disorders, and pharmaceutical compositions containing such compounds.

Fused Cyclic Modulators of Nuclear Hormone Receptor Function

This application claims priority from U.S. Application Serial No. 60/214,392, filed June 28, 2000, from U.S. Application Serial No. 60/284,617, filed April 18, 2001, and from U.S. Application Serial No. 60/284,438, filed April 18, 2001, which provisional applications are incorporated herein by reference in their entirety.

Field of the Invention

The present invention relates to fused cyclic compounds, to methods of using such compounds in the treatment of nuclear hormone receptor-associated conditions such as cancer, and to pharmaceutical compositions containing such compounds.

Background of the Invention

Nuclear hormone receptors (NHR's) constitute a large super-family of ligand-dependent and sequence-specific transcription factors. Members of this family influence transcription either directly, through specific binding to the promoter target genes (Evans, in *Science* 240: 889-895 (1988)), or indirectly, via protein-protein interactions with other transcription factors (Jonat et al., *Cell* 62: 1189-1204 (1990), Schuele et al., *Cell* 62: 1217-1226 (1990), and Yang-Yen et al., *Cell* 62: 1205-1215 (1990)). The nuclear hormone receptor super-family (also known in the art as the "steroid/thyroid hormone receptor super-family") includes receptors for a variety of hydrophobic ligands, including cortisol, aldosterone, estrogen, progesterone, testosterone, vitamin D3, thyroid hormone and retinoic acid (Evans, 1988, *supra*). In addition to these conventional nuclear hormone receptors, the super-family contains a number of proteins that have no known ligands, termed orphan nuclear hormone receptors (Mangelsdorf et al., *Cell* 83: 835-839 (1995), O'Malley et al., *Mol. Endocrinol.* 10: 1293 (1996), Enmark et al., *Mol. Endocrinol.* 10, 1293-1307 (1996) and Giguere, *Endocrin. Rev.* 20, 689-725 (1999)). The conventional nuclear hormone receptors are generally transactivators in the presence of ligand, and can either be active repressors or transcriptionally inert in the absence of ligand. Some of the orphan receptors behave as if they are transcriptionally inert in the absence of ligand.

Others, however, behave as either constitutive activators or repressors. These orphan nuclear hormone receptors are either under the control of ubiquitous ligands that have not been identified, or do not need to bind ligand to exert these activities.

5 In common with other transcription factors, the nuclear hormone receptors have a modular structure, being comprised of three distinct domains: an N-terminal domain of variable size containing a transcriptional activation function AF-1, a highly conserved DNA binding domain and a moderately conserved ligand-binding domain. The ligand-binding domain is not only responsible for binding the specific ligand but
10 also contains a transcriptional activation function called AF-2 and a dimerisation domain (Wurtz et al., *Nature Struc. Biol.* 3, 87-94 (1996), Parker et al., *Nature Struc. Biol.* 3, 113-115 (1996) and Kumar et al., *Steroids* 64, 310-319 (1999)). Although the overall protein sequence of these receptors can vary significantly, all share both a
15 common structural arrangement indicative of divergence from an ancestral archetype, and substantial homology (especially, sequence identity) at the ligand-binding domain.

 The steroid binding nuclear hormone receptors (SB-NHR's) comprise a sub-family of nuclear hormone receptors. These receptors are related in that they share a stronger sequence homology to one another, particularly in the ligand binding domain
20 (LBD), than to the other members of the NHR super-family (Evans, 1988, *supra*) and they all utilize steroid based ligands. Some examples of this sub-family of NHR's are the androgen receptor (AR), the estrogen receptor (ER), the progesterone receptor (PR), the glucocorticoid receptor (GR), the mineralocorticoid receptor (MR), the aldosterone receptor (ALDR) and the steroid and xenobiotic receptor (SXR) (Evans *et*
25 *al.*, WO 99/35246). Based on the strong sequence homology in the LBD, several orphan receptors may also be members of the SB-NHR sub-family.

 Consistent with the high sequence homology found in the LBD for each of the SB-NHR's, the natural ligands for each is derived from a common steroid core. Examples of some of the steroid based ligands utilized by members of the SB-NHR's
30 include cortisol, aldosterone, estrogen, progesterone, testosterone and dihydrotestosterone. Specificity of a particular steroid based ligand for one SB-NHR

versus another is obtained by differential substitution about the steroid core. High affinity binding to a particular SB-NHR, coupled with high level specificity for that particular SB-NHR, can be achieved with only minor structural changes about the steroid core (e.g., Waller et al., *Toxicol. Appl. Pharmacol.* 137, 219-227 (1996) and
5 Mekenyan et al., *Environ. Sci. Technol.* 31, 3702-3711 (1997), binding affinity for progesterone towards the androgen receptor as compared to testosterone).

Numerous synthetically derived steroidal and non-steroidal agonists and antagonists have been described for the members of the SB-NHR family. Many of these agonist and antagonist ligands are used clinically in man to treat a variety of
10 medical conditions. RU486 is an example of a synthetic agonist of the PR, which is utilized as a birth control agent (Vegeto et al., *Cell* 69: 703-713 (1992)), and Flutamide is an example of an antagonist of the AR, which is utilized for the treatment of prostate cancer (Neri et al., *Endo.* 91, 427-437 (1972)). Tamoxifen is an example of a tissues specific modulator of the ER function, that is used in the
15 treatment of breast cancer (Smigel *J. Natl. Cancer Inst.* 90, 647-648 (1998)). Tamoxifen can function as an antagonist of the ER in breast tissue while acting as an agonist of the ER in bone (Grese et al., *Proc. Natl. Acad. Sci. USA* 94, 14105-14110 (1997)). Because of the tissue selective effects seen for Tamoxifen, this agent and agents like it are referred to as "partial-agonist" or partial-antagonist". In addition to
20 synthetically derived non-endogenous ligands, non-endogenous ligands for NHR's can be obtained from food sources (Regal et al., *Proc. Soc. Exp. Biol. Med.* 223, 372-378 (2000) and Hempstock et al., *J. Med. Food* 2, 267-269 (1999)). The flavanoid phytoestrogens are an example of an unnatural ligand for SB-NHR's that are readily obtained from a food source such as soy (Quella et al., *J. Clin. Oncol.* 18, 1068-1074
25 (2000) and Banz et al., *J. Med. Food* 2, 271-273 (1999)). The ability to modulate the transcriptional activity of individual NHR by the addition of a small molecule ligand, makes them ideal targets for the development of pharmaceutical agents for a variety of disease states.

As mentioned above, non-natural ligands can be synthetically engineered to
30 serve as modulators of the function of NHR's. In the case of SB-NHR's, engineering of an unnatural ligand can include the identification of a core structure which mimics

the natural steroid core system. This can be achieved by random screening against several SB-NHR's or through directed approaches using the available crystal structures of a variety of NHR ligand binding domains (Bourguet et al., *Nature* 375, 377-382 (1995), Brzozowski, et al., *Nature* 389, 753-758 (1997), Shiau et al., *Cell* 95, 927-937 (1998) and Tanenbaum et al., *Proc. Natl. Acad. Sci. USA* 95, 5998-6003 (1998)). Differential substitution about such a steroid mimic core can provide agents with selectivity for one receptor versus another. In addition, such modifications can be employed to obtain agents with agonist or antagonist activity for a particular SB-NHR. Differential substitution about the steroid mimic core can result in the formation of a series of high affinity agonists and antagonists with specificity for, for example, ER versus PR versus AR versus GR versus MR. Such an approach of differential substitution has been reported, for example, for quinoline based modulators of steroid NHR in *J. Med. Chem.*, 41, 623 (1999); WO 9749709; US 5696133; US 5696130; US 5696127; US 5693647; US 5693646; US 5688810; US 5688808 and WO 9619458, all incorporated herein by reference.

The compounds of the present invention comprise a core which serves as a steroid mimic, and are useful as modulators of the function of steroid binding nuclear hormone receptors, as well as other NHR as described following.

20

Summary of the Invention

The present invention provides fused cyclic compounds of the following formula I and salts thereof, which compounds are especially useful as modulators of nuclear hormone receptor function:

25

As used in formula I, and throughout the specification, the symbols have the following meanings unless otherwise indicated, and are, for each occurrence, independently selected:

- G is an aryl or heterocyclo (e.g., heteroaryl) group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions, preferably with hydrogen, alkyl or substituted alkyl, alkenyl or substituted alkenyl, alkynyl or substituted alkynyl, halo, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, aryl or substituted aryl, heterocyclo or substituted heterocyclo, arylalkyl or substituted arylalkyl, heterocycloalkyl or substituted heterocycloalkyl, CN, $R^1OC=O$, $R^1C=O$, $R^1C=S$, $R^1HNC=O$, $R^1R^2NC=O$, $HO-CR^3R^3$, nitro, R^1OCH_2 , R^1O , NH_2 , NR^4R^5 , SR^1 , $S=OR^1$, SO_2R^1 , SO_2OR^1 , $SO_2NR^1R^1$, $(R^1O)(R^1O)P=O$, $(R^1)(R^1)P=O$, or $(R^1)(NHR^1)P=O$;
- E is $C=Z_2$, CR^7R^7 (e.g., CHR^7), SO_2 , $P=OR^2$, or $P=OOR^2$;
- Z_1 is O, S, NH, or NR^6 ;
- Z_2 is O, S, NH, or NR^6 ;
- A_1 is CR^7 or N;
- A_2 is CR^7 or N;
- Y is J-J'-J'' where J is $(CR^7R^7)_n$ and $n = 0-3$, J' is a bond or O, S, S=O, SO_2 , NH, NR^6 , C=O, OC=O, $NR^1C=O$, CR^7R^7 , $C=CR^8R^8$, $R^2P=O$, $OPOOR^2$, OPO_2 , OSO_2 , C=N, $NHNH$, $NHNR^6$, NR^6NH , N=N, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo or aryl or substituted aryl, and J'' is $(CR^7R^7)_n$ and $n = 0-3$, where Y is not a bond;
- W is $CR^7R^7-CR^7R^7$, $CR^8=CR^8$, $CR^7R^7-C=O$, $NR^9-CR^7R^7$, $N=CR^8$, $N=N$, NR^9-NR^9 , cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, or aryl or substituted aryl;
- Q is H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl,

heterocycloalkyl or substituted heterocycloalkyl, arylalkyl or substituted arylalkyl, alkynyl or substituted alkynyl, aryl or substituted aryl, heterocyclo (e.g., heteroaryl) or substituted heterocyclo (e.g., substituted heteroaryl), halo, CN, $R^1OC=O$, $R^4C=O$, $R^5R^6NC=O$, $HO CR^7R^7$, nitro, R^1OCH_2 , R^1O , NH_2 ,

5 $C=OSR^1$, SO_2R^1 or NR^4R^5 ;

M is a bond, O, CR^7R^7 or NR^{10} , and M' is a bond or NR^{10} , with the proviso that at least one of M or M' must be a bond;

L is a bond, $(CR^7R^7)_n$, NH, NR^5 or $N(CR^7R^7)_n$, where $n = 0-3$;

R^1 and $R^{1'}$ are each independently H, alkyl or substituted alkyl, cycloalkyl or

10 substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl;

15 R^2 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl;

20 R^3 and R^3' are each independently H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN, hydroxylamine, hydroxamide, alkoxy or substituted alkoxy, amino, NR^1R^2 , thiol, alkylthio or substituted alkylthio;

25 R^4 is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl,

30

substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1$;

R^5 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo,

5 cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;

10 R^6 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR^1 , $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;

15 R^7 and R^7 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN, OR^1 , nitro, hydroxylamine, hydroxylamide, amino, NHR^4 , NR^2R^5 , NOR^1 , thiol, alkylthio or substituted alkylthio, $R^1C=O$, $R^1OC=O$, $R^1NHC=O$, SO_2R^1 , SOR^1 , $PO_3R^1R^1$, $R^1R^1NC=O$, $C=OSR^1$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;

25 R^8 and R^8 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, nitro, halo, CN, OR^1 , amino, NHR^4 , NR^2R^5 , NOR^1 , alkylthio or substituted alkylthio, $C=OSR^1$, $R^1OC=O$, $R^1C=O$, $R^1NHC=O$, $R^1R^1NC=O$, SO_2OR^1 , $S=OR^1$, SO_2R^1 , $PO_3R^1R^1$, or $SO_2NR^1R^1$;

30

- R^9 and R^9' are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR^1 , $R^1C=O$, $R^1OC=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^{1'}$; and
- R^{10} is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR^1 , $R^1C=O$, $R^1OC=O$, $R^1R^{1'}NC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^{1'}$.
- The compounds of formula I and salts thereof, comprising a core which can serve as a steroid mimic (and which do not require the presence of a steroid-type (e.g., cyclopentanoperhydrophenanthrene analog) structure), are novel except that:
- where E is $C=O$, M and M' are both a bond, Z_1 is O, Q is H and A_1 and A_2 are CH: (i) G-L- is not phenyl, 4-chlorophenyl or benzyl when W is $-CH=CH-$ and Y is $-CH_2-CH_2-$; (ii) G-L- is not phenyl when W is $-CH=CH-$ or $-CH_2-CH_2-$ and Y is $-CH_2-$; (iii) G-L- is not phenyl, 4-methoxyphenyl, 4-chlorophenyl, or certain (optionally substituted aryl)-(C₁-C₃)-alkyl- groups (e.g., benzyl), when W and Y are $-CH_2-CH_2-$; and (iv) G-L- is not 4-chlorophenyl or benzyl when W and Y are phenylene;
- where E is $C=O$, M and M' are both a bond, Z_1 is O, and A_1 and A_2 are CH: (i) G-L- is not benzyl when Q is $-CO_2CH_3$, W is $-CH=CH-$ and Y is $-CH_2-$ or $-CH_2CH_2-$; and (ii) G-L- is not phenyl when Q is methyl, W is $-CH=CH-$ and Y is $-CH_2-$;
- where E is $C=S$, M and M' are both a bond, Z_1 is O, Q is H, A_1 and A_2 are CH, W is $-CH=CH-$ and Y is $-CH_2-$ or $-CH_2-CH_2-$, G-L- is not phenyl; and

where E is C=O, M and M' are both a bond, Z₁ is O, Q is H, Y is -CH₂-CH₂-, and W is -CH=CH- or -CH₂-CH₂-, G-L- is not 4-chlorophenyl (i) when A₁ and A₂ are C-CH₃; and (ii) when A₁ is C-isopropyl and A₂ is C-CH₃.

5

Further Description of the Invention

The following are definitions of terms used in the present specification. The initial definition provided for a group or term herein applies to that group or term throughout the present specification individually or as part of another group, unless otherwise indicated.

10

The terms "alkyl" and "alk" refers to a straight or branched chain alkane (hydrocarbon) radical containing from 1 to 12 carbon atoms, preferably 1 to 6 carbon atoms. Exemplary such groups include methyl, ethyl, propyl, isopropyl, n-butyl, t-butyl, isobutyl, pentyl, hexyl, isohexyl, heptyl, 4,4-dimethylpentyl, octyl, 2,2,4-trimethylpentyl, nonyl, decyl, undecyl, dodecyl, and the like. "Substituted alkyl"

15

refers to an alkyl group substituted with one or more substituents, preferably 1 to 4 substituents, at any available point of attachment. Exemplary substituents include but are not limited to one or more of the following groups: halo (e.g., a single halo substituent or multiple halo substituents forming, in the latter case, groups such as a perfluoroalkyl group or an alkyl group bearing Cl₂ or CF₃), alkoxy, alkylthio,

20

hydroxy, carboxy (i.e., -COOH), alkoxycarbonyl, alkylcarbonyloxy, amino (i.e., -NH₂), carbamoyl or substituted carbomoyl, carbamate or substituted carbamate, urea or substituted urea, amidinyl or substituted amidinyl, thiol (-SH), aryl, heterocycle, cycloalkyl, heterocycloalkyl, -S-aryl, -S-heterocycle, -S=O-aryl, -S=O-heterocycle, -S(O)₂-aryl, -S(O)₂-heterocycle, -NHS(O)₂-aryl, -NHS(O)₂-heterocycle,

25

-NHS(O)₂NH-aryl, -NHS(O)₂NH-heterocycle, -P(O)₂-aryl, -P(O)₂-heterocycle, -NHP(O)₂-aryl, -NHP(O)₂-heterocycle, -NHP(O)₂NH-aryl, -NHP(O)₂NH-heterocycle, -O-aryl, -O-heterocycle, -NH-aryl, -NH-heterocycle, -NHC=O-aryl, -NHC=O-heterocycle, -OC=O-aryl, -OC=O-heterocycle, -NHC=ONH-aryl,

30

-NHC=ONH-heterocycle, -OC=OO-aryl, -OC=OO-heterocycle, -OC=ONH-aryl, -OC=ONH-heterocycle, -NHC=OO-aryl, -NHC=OO-heterocycle, -C=ONH-aryl, -C=ONH-heterocycle, -C=OO-aryl, -C=OO-heterocycle, -N(alkyl)S(O)₂-aryl,

- N(alkyl)S(O)₂-heterocycle, -N(alkyl)S(O)₂NH-aryl, N(alkyl)S(O)₂NH-heterocycle,
 -N(alkyl)P(O)₂-aryl, -N(alkyl)P(O)₂-heterocycle, -N(alkyl)P(O)₂NH-aryl,
 N(alkyl)P(O)₂NH-heterocycle, -N(alkyl)-aryl, -N(alkyl)-heterocycle,
 -N(alkyl)C=O-aryl, -N(alkyl)C=O-heterocycle, -N(alkyl)C=ONH-aryl,
 5 -N(alkyl)C=ONH-heterocycle, -OC=ON(alkyl)-aryl, -OC=ON(alkyl)-heterocycle,
 -N(alkyl)C=OO-aryl, -N(alkyl)C=OO-heterocycle, -C=ON(alkyl)-aryl, -
 C=ON(alkyl)-heterocycle, -NHS(O)₂N(alkyl)-aryl, NHS(O)₂N(alkyl)-heterocycle,
 NHP(O)₂N(alkyl)-aryl, NHP(O)₂N(alkyl)-heterocycle, -NHC=ON(alkyl)-aryl,
 -NHC=ON(alkyl)-heterocycle, -N(alkyl)S(O)₂N(alkyl)-aryl,
 10 -N(alkyl)S(O)₂N(alkyl)-heterocycle, -N(alkyl)P(O)₂N(alkyl)-aryl,
 -N(alkyl)P(O)₂N(alkyl)-heterocycle, -N(alkyl)C=ON(alkyl)-aryl, and
 -N(alkyl)C=ON(alkyl)-heterocycle, as well as by OR¹³ where R¹³ is defined below in
 Scheme XV. In the aforementioned exemplary substituents, groups such as "aryl"
 and "heterocycle" can themselves be optionally substituted.
- 15 The term "alkenyl" refers to a straight or branched chain hydrocarbon radical
 containing from 2 to 12 carbon atoms and at least one carbon-carbon double bond.
 Exemplary such groups includes ethenyl or allyl. "Substituted alkenyl" refers to an
 alkenyl group substituted with one or more substituents, preferably 1 to 4 substituents,
 at any available point of attachment. Exemplary substituents include, but are not
 20 limited to, alkyl or substituted alkyl, as well as those groups recited above as
 exemplary alkyl substituents.
- The term "alkynyl" refers to a straight or branched chain hydrocarbon radical
 containing from 2 to 12 carbon atoms and at least one carbon to carbon triple bond.
 Exemplary such groups include ethynyl. "Substituted alkynyl" refers to an alkynyl
 25 group substituted with one or more substituents, preferably 1 to 4 substituents, at any
 available point of attachment. Exemplary substituents include, but are not limited to,
 alkyl or substituted alkyl, as well as those groups recited above as exemplary alkyl
 substituents.
- The term "cycloalkyl" refers to a fully saturated cyclic hydrocarbon group
 30 containing from 1 to 4 rings and 3 to 8 carbons per ring. Exemplary such groups
 include cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, etc. "Substituted

cycloalkyl" refers to a cycloalkyl group substituted with one or more substituents, preferably 1 to 4 substituents, at any available point of attachment. Exemplary substituents include, but are not limited to, nitro, cyano, alkyl or substituted alkyl, as well as those groups recited above as exemplary alkyl substituents, and as previously mentioned as preferred aryl substituents in the definition for G. Exemplary substituents also include spiro-attached or fused cyclic substituents, especially cycloalkenyl or substituted cycloalkenyl.

The term "cycloalkenyl" refers to a partially unsaturated cyclic hydrocarbon group containing 1 to 4 rings and 3 to 8 carbons per ring. Exemplary such groups include cyclobutenyl, cyclopentenyl, cyclohexenyl, etc. "Substituted cycloalkenyl" refers to a cycloalkenyl group substituted with one more substituents, preferably 1 to 4 substituents, at any available point of attachment. Exemplary substituents include but are not limited to nitro, cyano, alkyl or substituted alkyl, as well as those groups recited above as exemplary alkyl substituents, and as previously mentioned as preferred aryl substituents in the definition for G. Exemplary substituents also include spiro-attached or fused cyclic substituents, especially cycloalkyl or substituted cycloalkyl.

The terms "alkoxy" or "alkylthio" refer to an alkyl group as described above bonded through an oxygen linkage (-O-) or a sulfur linkage (-S-), respectively. The terms "substituted alkoxy" or "substituted alkylthio" refer to a substituted alkyl group as described above bonded through an oxygen or sulfur linkage, respectively.

The term "alkoxycarbonyl" refers to an alkoxy group bonded through a carbonyl group.

The term "alkylcarbonyl" refers to an alkyl group bonded through a carbonyl group. The term "alkylcarbonyloxy" refers to an alkylcarbonyl group bonded through an oxygen linkage.

The terms "arylalkyl", "substituted arylalkyl", "cycloalkylalkyl", "substituted cycloalkylalkyl", "cycloalkenylalkyl", "substituted cycloalkenylalkyl", "heterocycloalkyl" and "substituted heterocycloalkyl" refer to aryl, cycloalkyl, cycloalkenyl and heterocyclo groups bonded through an alkyl group, substituted on

the aryl, cycloalkyl, cycloalkenyl or heterocyclo and/or the alkyl group where indicated as "substituted."

The term "aryl" refers to cyclic, aromatic hydrocarbon groups which have 1 to 5 aromatic rings, especially monocyclic or bicyclic groups such as phenyl, biphenyl or naphthyl. Where containing two or more aromatic rings (bicyclic, etc.), the aromatic rings of the aryl group may be joined at a single point (e.g., biphenyl), or fused (e.g., naphthyl, phenanthrenyl and the like). "Substituted aryl" refers to an aryl group substituted by one or more substituents, preferably 1 to 3 substituents, at any point of attachment. Exemplary substituents include, but are not limited to, nitro, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, cyano, alkyl- $S(O)_m$ - ($m=0, 1$ or 2), alkyl or substituted alkyl, as well as those groups recited above as exemplary alkyl substituents and as previously mentioned as preferred aryl substituents in the definition for G. Exemplary substituents also include fused cyclic substituents, such as heterocyclo or cycloalkenyl, or substituted heterocyclo or cycloalkenyl, groups.

"Carbamoyl" refers to the group $-CONH-$ which is bonded on one end to the remainder of the molecule and on the other to hydrogen or an organic moiety (such as alkyl, substituted alkyl, aryl, substituted aryl, heterocycle, alkylcarbonyl, hydroxyl and substituted nitrogen). "Carbamate" refers to the group $-O-CO-NH-$ which is bonded on one end to the remainder of the molecule and on the other to hydrogen or an organic moiety (such as those listed above). "Urea" refers to the group $-NH-CO-NH-$ which is bonded on one end to the remainder of the molecule and on the other to hydrogen or an organic moiety (such as those listed above). "Amidinyl" refers to the group $-C(=NH)(NH_2)$. "Substituted carbamoyl," "substituted carbamate," "substituted urea" and "substituted amidinyl" refer to carbamoyl, carbamate, urea or amidinyl groups as described above in which one more of the hydrogen groups are replaced by an organic moiety (such as those listed above).

The terms "heterocycle", "heterocyclic" and "heterocyclo" refer to fully saturated, or partially or fully unsaturated, including aromatic (i.e., "heteroaryl") cyclic groups (for example, 4 to 7 membered monocyclic, 7 to 11 membered bicyclic, or 10 to 16 membered tricyclic ring systems) which have at least one heteroatom in at

- least one carbon atom-containing ring. Each ring of the heterocyclic group containing a heteroatom may have 1, 2, 3, or 4 heteroatoms selected from nitrogen atoms, oxygen atoms and/or sulfur atoms, where the nitrogen and sulfur heteroatoms may optionally be oxidized and the nitrogen heteroatoms may optionally be quaternized. (The term
- 5 "heteroarylium" refers to a heteroaryl group bearing a quaternary nitrogen atom and thus a positive charge.) The heterocyclic group may be attached to the remainder of the molecule at any heteroatom or carbon atom of the ring or ring system. Exemplary monocyclic heterocyclic groups include azetidiny, pyrrolidinyl, pyrrolyl, pyrazolyl, oxetanyl, pyrazolinyl, imidazolyl, imidazolidinyl, imidazolidinyl, oxazolyl,
- 10 oxazolidinyl, isoxazoliny, isoxazolyl, thiazolyl, thiadiazolyl, thiazolidinyl, isothiazolyl, isothiazolidinyl, furyl, tetrahydrofuryl, thienyl, oxadiazolyl, piperidinyl, piperazinyl, 2-oxopiperazinyl, 2-oxopiperidinyl, 2-oxopyrrolodinyl, 2-oxoazepinyl, azepinyl, hexahydrodiazepinyl, 4-piperidonyl, pyridyl, pyrazinyl, pyrimidinyl, pyridazinyl, triazinyl, triazolyl, tetrazolyl, tetrahydropyranyl, morpholinyl,
- 15 thiamorpholinyl, thiamorpholinyl sulfoxide, thiamorpholinyl sulfone, 1,3-dioxolane and tetrahydro-1,1-dioxothienyl, and the like. Exemplary bicyclic heterocyclic groups include indolyl, isoindolyl, benzothiazolyl, benzoxazolyl, benzoxadiazolyl, benzothienyl, quinuclidinyl, quinolinyl, tetrahydroisoquinolinyl, isoquinolinyl, benzimidazolyl, benzopyranyl, indolizinyl, benzofuryl, benzofurazanyl, chromonyl,
- 20 coumarinyl, benzopyranyl, cinnolinyl, quinoxaliny, indazolyl, pyrrolopyridyl, furopyridinyl (such as furo[2,3-c]pyridinyl, furo[3,2-b]pyridinyl] or furo[2,3-b]pyridinyl), dihydroisoindolyl, dihydroquinazolinyl (such as 3,4-dihydro-4-oxo-quinazolinyl), triazinylazepinyl, tetrahydroquinolinyl and the like. Exemplary tricyclic heterocyclic groups include carbazolyl, benzidolyl, phenanthrolinyl,
- 25 acridinyl, phenanthridinyl, xanthenyl and the like.

"Substituted heterocycle," "substituted heterocyclic," and "substituted heterocyclo" (such as "substituted heteroaryl") refer to heterocycle, heterocyclic or heterocyclo groups substituted with one or more substituents, preferably 1 to 4 substituents, at any available point of attachment. Exemplary substituents include,

30 but are not limited to, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, nitro, oxo (i.e., = O), cyano, alkyl-S(O)_m- (m = 0, 1 or 2), alkyl or

substituted alkyl, as well as those groups recited above as exemplary alkyl substituents, and as previously mentioned as preferred heterocyclo substituents in the definition for G.

The term "quaternary nitrogen" refers to a tetravalent positively charged nitrogen atom including, for example, the positively charged nitrogen in a tetraalkylammonium group (e.g., tetramethylammonium, N-methylpyridinium), the positively charged nitrogen in protonated ammonium species (e.g., trimethylhydroammonium, N-hydropyridinium), the positively charged nitrogen in amine N-oxides (e.g., N-methyl-morpholine-N-oxide, pyridine-N-oxide), and the positively charged nitrogen in an N-amino-ammonium group (e.g., N-aminopyridinium).

The terms "halogen" or "halo" refer to chlorine, bromine, fluorine or iodine.

The terms "hydroxylamine" and "hydroxylamide" refer to the groups OH-NH- and OH-NH-CO-, respectively.

When a functional group is termed "protected", this means that the group is in modified form to mitigate, especially preclude, undesired side reactions at the protected site. Suitable protecting groups for the methods and compounds described herein include, without limitation, those described in standard textbooks, such as Greene, T. W. et al., *Protective Groups in Organic Synthesis*, Wiley, N.Y. (1991).

When a term such as "(CRR)_n" is used, it denotes an optionally substituted alkyl chain existing between the two fragments to which it is bonded, the length of which chain is defined by the range described for the term n. An example of this is n=0-3, implying from zero to three (CRR) units existing between the two fragments, which are attached to the primary and terminal (CRR) units. In the situation where the term n is set to zero (n = 0) then a bond exists between the two fragments attached to (CRR).

Unless otherwise indicated, any heteroatom with unsatisfied valences is assumed to have hydrogen atoms sufficient to satisfy the valences.

Divalent groups, such as those in the definition of W (e.g., NR⁹-CR⁷R⁷), may be bonded in either direction to the remainder of the molecule (e.g.,

$-A_1-NR^9-CR^7R^7-A_2-$ or $-A_1-CR^7R^7-NR^9-A_2-$ for the aforementioned group within the definition of W).

Carboxylate anion refers to a negatively charged group $-COO^-$.

The compounds of formula I form salts which are also within the scope of this invention. Reference to a compound of the formula I herein is understood to include reference to salts thereof, unless otherwise indicated. The term "salt(s)", as employed herein, denotes acidic and/or basic salts formed with inorganic and/or organic acids and bases. In addition, when a compound of formula I contains both a basic moiety, such as but not limited to a pyridine or imidazole, and an acidic moiety such as but not limited to a carboxylic acid, zwitterions ("inner salts") may be formed and are included within the term "salt(s)" as used herein. Pharmaceutically acceptable (i.e., non-toxic, physiologically acceptable) salts are preferred, although other salts are also useful, e.g., in isolation or purification steps which may be employed during preparation. Salts of the compounds of the formula I may be formed, for example, by reacting a compound I with an amount of acid or base, such as an equivalent amount, in a medium such as one in which the salt precipitates or in an aqueous medium followed by lyophilization.

The compounds of formula I which contain a basic moiety, such as but not limited to an amine or a pyridine or imidazole ring, may form salts with a variety of inorganic and inorganic acids. Exemplary acid addition salts include acetates (such as those formed with acetic acid or trihaloacetic acid, for example, trifluoroacetic acid), adipates, alginates, ascorbates, aspartates, benzoates, benzenesulfonates, bisulfates, borates, butyrates, citrates, camphorates, camphorsulfonates, cyclopentanepropionates, digluconates, dodecylsulfates, ethanesulfonates, fumarates, glucoheptanoates, glycerophosphates, hemisulfates, heptanoates, hexanoates, hydrochlorides, hydrobromides, hydroiodides, hydroxyethanesulfonates (e.g., 2-hydroxyethanesulfonates), lactates, maleates, methanesulfonates, naphthalenesulfonates (e.g., 2-naphthalenesulfonates), nicotines, nitrates, oxalates, pectinates, persulfates, phenylpropionates (e.g., 3-phenylpropionates), phosphates, picrates, pivalates, propionates, salicylates, succinates, sulfates (such as those formed

with sulfuric acid), sulfonates (such as those mentioned herein), tartrates, thiocyanates, toluenesulfonates such as tosylates, undecanoates, and the like.

The compounds of formula I which contain an acidic moiety, such but not limited to a carboxylic acid, may form salts with a variety of organic and inorganic bases. Exemplary basic salts include ammonium salts, alkali metal salts such as sodium, lithium and potassium salts, alkaline earth metal salts such as calcium and magnesium salts, salts with organic bases (for example, organic amines) such as benzathines, dicyclohexylamines, hydrabamines (formed with N,N-bis(dehydroabietyl)ethylenediamine), N-methyl-D-glucamines, N-methyl-D-glycamides, t-butyl amines, and salts with amino acids such as arginine, lysine and the like. Basic nitrogen-containing groups may be quaternized with agents such as lower alkyl halides (e.g. methyl, ethyl, propyl, and butyl chlorides, bromides and iodides), dialkyl sulfates (e.g. dimethyl, diethyl, dibutyl, and diamyl sulfates), long chain halides (e.g. decyl, lauryl, myristyl and stearyl chlorides, bromides and iodides), aralkyl halides (e.g. benzyl and phenethyl bromides), and others.

Prodrugs and solvates of the compounds of the invention are also contemplated herein. The term "prodrug" as employed herein denotes a compound which, upon administration to a subject, undergoes chemical conversion by metabolic or chemical processes to yield a compound of the formula I, or a salt and/or solvate thereof. Solvates of the compounds of formula I include, for example, hydrates.

Compounds of the formula I, and salts thereof, may exist in their tautomeric form (for example, as an amide or imino ether). All such tautomeric forms are contemplated herein as part of the present invention.

All stereoisomers of the present compounds (for example, those which may exist due to asymmetric carbons on various substituents), including enantiomeric forms and diastereomeric forms, are contemplated within the scope of this invention. Individual stereoisomers of the compounds of the invention may, for example, be substantially free of other isomers (e.g., as a pure or substantially pure optical isomer having a specified activity), or may be admixed, for example, as racemates or with all other, or other selected, stereoisomers. The chiral centers of the present invention may have the S or R configuration as defined by the IUPAC 1974 Recommendations.

The racemic forms can be resolved by physical methods, such as, for example, fractional crystallization, separation or crystallization of diastereomeric derivatives or separation by chiral column chromatography. The individual optical isomers can be obtained from the racemates by any suitable method, including without limitation, conventional methods, such as, for example, salt formation with an optically active acid followed by crystallization.

All configurational isomers of the compounds of the present invention are contemplated, either in admixture or in pure or substantially pure form. The definition of compounds of the present invention embraces both cis (*Z*) and trans (*E*) alkene isomers, as well as cis and trans isomers of cyclic hydrocarbon or heterocyclic rings.

Throughout the specifications, groups and substituents thereof may be chosen to provide stable moieties and compounds.

15

Methods of Preparation

The compounds of the present invention may be prepared by methods such as those illustrated in the following Schemes I to XV. Solvents, temperatures, pressures, and other reaction conditions may readily be selected by one of ordinary skill in the art. Starting materials are commercially available or readily prepared by one of ordinary skill in the art or prepared by methods illustrated in Figures 1 to 3. Combinatorial techniques may be employed in the preparation of compounds, for example, where the intermediates possess groups suitable for these techniques. See the following for alternative methods which may be employed in the preparation of compounds of the present invention: *Tetrahedron*, 27, 3119 (1971); *Tetrahedron*, 30, 2977 (1974); *Tetrahedron. Let.*, 31, 2631 (1969); *J. Org. Chem.*, 35, 3097 (1970); *Bull. Chem. Soc. Jpn.*, 67, 3082 (1994); *Bull. Chem. Soc. Jpn.*, 65, 61 (1992); European Patent (EP) No. 406119; U.S. Patent No. 4,397,857; Pons *et al.*, *Eur. J. Org. Chem.*, 853-859 (1998); Kucharczyk *et al.*, *J. Med. Chem.*, 1654-1661 (1993); and German Patent (DE) Document No. 3227055.

All documents cited in the present specification, such as those cited in this "Methods of Preparation" as well as other sections herein, are incorporated herein by reference in their entirety. Such documents are not admitted as prior art.

Scheme I

As illustrated in Scheme I, compounds of formula I can be obtained from azabicyclo-3-ethylcarboxylate intermediates of formula II. Intermediates of formula II can be prepared, for example, from the synthetic approaches described in *Bull. Chem. Soc. Jpn.*, 65, 61 (1992), *Tetrahedron Lett.* 31, 2603 (1990), *Chem. Commun.* 597 (1999), *Tetrahedron Lett.* 38, 4021, (1997), *Tetrahedron Lett.* 40, 7929 (1999), *Synlett.* 1, 29 (1991), *J. Chem. Soc., Chem. Commun.* 1601 (1988), *J. Org. Chem.* 31, 1059 (1966), *Synthesis* 10, 925 (1990), *Tetrahedron Lett.* 40, 8447 (1999), US Patent No. 4775668 and EP No. 266576 and the references therein, by one of ordinary skill in the art (incorporated herein by reference in their entirety). In addition to a racemic mixture of a compound of formula II, individual antipodes can be synthesized, for example, in accordance with procedures set forth in the above documents. Exemplary methods for preparing compounds of the formula II are described further below in Figures 1 to 3.

Treatment of II with an intermediate of formula $Z_2=\text{C}=\text{N}-\text{L}-\text{G}$, yields an intermediate of formula III. The intermediates of formula $Z_2=\text{C}=\text{N}-\text{L}-\text{G}$ can be obtained, for example, from commercially available isocyanates, thioisocyanates and carbodiimides or can be readily prepared by one skilled in the art. An intermediate of formula III can be heated with or without the presence of a base, such as DBU or triethylamine, to yield a compound of formula IV, which is compound of formula I where M' and M are each a bond and E is $\text{C}=\text{Z}_2$. The individual optical isomers of a compound of Formula IV (also known as antipodes) can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula II or by separation of the racemic mixture by standard techniques. The individual α or β (endo or exo) isomers of a compound of formula IV can be obtained, for example, by separation of a resulting mixture by standard techniques.

Scheme II

- 5 Scheme II describes a method for preparing compounds of formula I wherein an intermediate of formula II is treated with a phosgene like reagent of formula Cl-E-Cl in the presence of a base, such as NaHCO₃, to yield an intermediate of formula V. The phosgene like intermediates of formula Cl-E-Cl can be obtained from commercially available sources or can readily be prepared by one skilled in the art. Phosgene equivalents such as carbonyldiimidazoles may alternatively be employed in this step, and elsewhere in these Schemes as appropriate, in place of Cl-E-Cl. The intermediate of formula V can be reacted with an amine of formula H₂N-L-G in the presence of a base, such as diisopropylamine or triethylamine, with or without a coupling reagent, such as DMAP, to give an intermediate of formula VI.
- 15 The amine intermediates of formula H₂N-L-G can be obtained from commercially available sources or can readily be prepared by one skilled in the art. The intermediate of formula VI can be converted to a compound of formula VII by heating with or without the presence of a base, such as DBU or triethylamine. A compound of formula VII is a compound of formula I where M and M' are each a bond and E is C=Z₂, SO₂, P=OR² or P=OOR². The individual antipodes of a compound of formula VII can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula II or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula VII can be obtained, for example, by separation of a resulting mixture by standard techniques.
- 25 standard techniques.

Scheme III

- 5
- Scheme III describes a method for preparing compounds of formula I wherein an intermediate of formula II is saponified to an acid of formula VIII by treatment with a base, such as sodium hydroxide. The acid can then be coupled to an amine of formula $\text{H}_2\text{N-L-G}$ via a variety of coupling reagents, for example, as
- 10 described in *The Practice of Peptide Synthesis*, Springer-Verlag, 2nd Ed., Bodanszky, Miklos, 1993 (incorporated herein by reference in its entirety), to yield an amide intermediate of formula IX. The intermediate of formula IX can be heated, with or without the presence of a base such as triethylamine, with a phosgene like reagent of formula Cl-E-Cl , to yield a compound of formula VII, which is a compound of
- 15 formula I where M and M' are each a bond and E is $\text{C}=\text{Z}_2$, SO_2 , $\text{P}=\text{OR}^2$ or $\text{P}=\text{OOR}^2$. The individual antipodes of a compound of formula VII can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula II or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula VII can be obtained, for example, by separation of
- 20 a resulting mixture by standard techniques.

Scheme IV

- 5 As shown in Scheme IV, a route to compounds of formula I in which E is $C=Z_2$ and $Z_2 = N-CN$, involves treatment of an intermediate of formula II with a substituted cyano-thiourea of formula $NC-NH-C(S)-NH-L-G$, in the presence of a water soluble coupling reagent (WSCD), such as 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride, as described in *Tetrahedron. Let.* 30, 7313 (1989)
- 10 (incorporated herein by reference in its entirety), to yield an intermediate of formula X. The substituted cyano-thioureas of formula $NC-NH-C(S)-NH-L-G$ can be obtained from commercially available sources or can readily be prepared by one skilled in the art. An intermediate of formula X can be heated with or without the presence of a base, such as DBU, to yield a compound of formula XI, which is a
- 15 compound of formula I where, in addition to E being $C=N-CN$, M and M' are each a bond. The individual antipodes of a compound of formula XI can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula II or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula XI can be obtained, for example, by
- 20 separation of a resulting mixture by standard techniques.

Scheme V

- 5 As illustrated in Scheme V, a compound of formula XII, which is a compound of formula I in which Q=H, can be converted to a compound of formula I where Q is equal to substituents as defined herein other than H, by treatment with a base such as LDA and an alkyl halide such as methyl iodide, preferably in a solvent such as tetrahydrofuran at low temperatures (e.g., -78°C) to yield a compound of
- 10 formula IV, which is a compound of formula I where M' and M are each a bond and E is C=Z₂. The individual antipodes of a compound of formula IV can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula XII or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula IV can be obtained, for example,
- 15 by use of the corresponding individual endo or exo isomers of a compound of formula XII or by separation of a resulting mixture by standard techniques. Compounds of the formula XII may be obtained, for example, by employing the procedure of Scheme I wherein Q=H.

Scheme VI

- As shown in Scheme VI, compounds of formula I can be synthesized by
- 5 means of a solid support route. As such, the above synthetic route allows for the synthesis of combinatorial libraries of compounds of formula I via, for example, standard procedures of automated solid phase synthesis. Treatment of a compound of formula II with a protecting agent such as di-*tert*-butylcarbonate, followed by hydrolysis of the ester group by treatment with a base, such as sodium hydroxide,
- 10 yields an intermediate of formula XIII. The intermediate of formula XIII can be attached to a solid support, such as a modified Merrifield resin, by treatment with a coupling reagent such as 2,6-dichloro-benzoyl chloride in the presence of pyridine and DMF, to yield a solid support intermediate of formula XIV. Removal of the protecting group can be achieved by treatment with an acid, such as trifluoroacetic acid in DMF with sonication, to yield a compound of formula XV, which can be
- 15 reacted with an intermediate of formula $Z_2=C=N-L-G$, to yield an intermediate of formula XVI. The final product, IV, can be formed and liberated from the solid support by heating the intermediate of formula XVI with or without a base, such as DBU. A compound of formula IV is a compound of formula I where M' and M are
- 20 each a bond and E is $C=Z_2$. The individual antipodes of a compound of formula IV can be obtained, for example, by use of the corresponding individual antipodes of a

compound of formula II or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula IV can be obtained, for example, by separation of a resulting mixture by standard techniques.

Scheme VII

- Scheme VII shows an alternate approach to the synthesis of compounds of formula I on solid support. As described for Scheme VI, an intermediate of formula XV can readily be synthesized. The intermediate of formula XV can be treated, with or without the presence of a base such as triethylamine or NaHCO_3 , with a phosgene like reagent of formula Cl-E-Cl , to yield an intermediate of formula XVII. The intermediate of formula XVII can be reacted with an amine of formula $\text{H}_2\text{N-L-G}$ in the presence of a base, such as diisopropylamine, with or without a coupling reagent, such as 4-dimethylamino pyridine, to give an intermediate of formula XVIII. The final product VII can be formed and liberated from the solid support by heating the intermediate of formula XVIII with or without a base, such as DBU. A compound of formula VII is a compound of formula I where M and M' are each a bond and E is
- 15 $\text{C}=\text{Z}_2, \text{SO}_2, \text{P}=\text{OR}^2$ or $\text{P}=\text{OOR}^2$. The individual antipodes of a compound of formula VII can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula II or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula VII can be obtained, for example, by separation of a resulting mixture by standard techniques.

Scheme VIII

5

As described in Scheme II, an intermediate of formula VI can be readily synthesized. As shown in Scheme VIII, treatment of an intermediate of formula VI with a substituted O-diphenylphosphinylhydroxylamine of formula $\text{Ph}_2\text{POONH-R}^{10}$, and potassium hydride as described in *Synthesis*, 7, 592 (1982) and *Tetrahedron Let.*, 29, 1777 (1988) (both incorporated herein by reference in their entirety), yields an intermediate of formula XXII. The intermediate of formula XXII can be heated with or without a base, such as triethylamine, to yield a compound of formula XXIII, which is a compound of formula I where M is a bond, M' is NR^{10} and E is $\text{C}=\text{Z}$, SO_2 , $\text{P}=\text{OR}^2$ or $\text{P}=\text{OOR}^2$. The individual antipodes of a compound of formula XXIII can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula II or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula XXIII can be obtained, for example, by separation of a resulting mixture by standard techniques.

Scheme IX

- 5 As described in Scheme VI, an intermediate of formula XIII can be readily synthesized. As shown in Scheme IX, the acid intermediate of formula XIII can be synthesized. As shown in Scheme IX, the acid intermediate of formula XIII can be coupled to an amine of formula H₂N-L-G via use of a variety of coupling reagents, as described in Scheme III, to yield an amide intermediate of formula XXIV. Treatment of the intermediate of formula XXIV with potassium hydride and a substituted O-
- 10 diphenylphosphinylhydroxylamine of formula Ph₂POONH-R¹⁰, as described in Scheme VIII, followed by removal of the BOC protecting group by treatment with an acid, such as trifluoroacetic acid, yields an intermediate of formula XXV. The intermediate of formula XXV can be treated with a phosgene like reagent of formula Cl-E-Cl, to yield an intermediate which can be heated with or without a base, such as
- 15 triethylamine, to yield a compound of formula XXVI, which is a compound of formula I where M' is a bond, M is NR¹⁰ and E is C=Z₂, SO₂, P=OR² or P=OOR². The individual antipodes of a compound of formula XXVI can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula XIII or by separation of the racemic mixture by standard techniques. The individual α or β
- 20 isomers of a compound of formula XXVI can be obtained, for example, by separation of a resulting mixture by standard techniques.

Scheme X

- 5 As described in Scheme IX, an intermediate of formula XXIV can be readily synthesized. As shown in Scheme X, treatment of an intermediate of formula XXIV with agents suitable for forming a hydroxylamide moiety, such as TMS-Cl followed by $\text{MoO}_5(\text{DMF})_2$ as described in *J. Org. Chem.*, 54, 5852 (1989) and *J. Org. Chem.*, 59, 8065 (1994) (both incorporated herein by reference in their entirety), and
- 10 for deprotection of a BOC group, such as ethanol saturated with HCl gas, results in the generation of a hydroxylamide intermediate of formula XXVII. The intermediate of formula XXVII can be treated with a phosgene like reagent of formula Cl-E-Cl , to yield a compound of formula XXVIII, which is a compound of formula I where M is O, M' is a bond, and E is C=Z_2 , SO_2 , P=OR^2 or P=OOR^2 . The individual antipodes of
- 15 a compound of formula XXVIII can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula XIII or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula XXVIII can be obtained, for example, by separation of a resulting mixture by standard techniques.

20

Scheme XI

- As shown in Scheme XI, treatment of an intermediate of formula $\text{H}_2\text{N-L-G}$ with a phosgene like reagent of formula Cl-E-Cl as described in *Oppi. Briefs* 17, 235 (1985), results in an intermediate of formula **XXXII**. The intermediate of formula **XXXII** can be reacted with an intermediate of formula **II** to yield an intermediate of formula **VI**. As described in Scheme II, an intermediate of formula **VI** can readily be converted to an intermediate of formula **VII**, which is a compound of formula **I** where
- 10 M and M' are each a bond and E is $\text{C}=\text{Z}_2$, SO_2 , $\text{P}=\text{OR}^2$ or $\text{P}=\text{OOR}^2$. The individual antipodes of a compound of formula **VII** can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula **II** or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula **VII** can be obtained, for example, by use of the corresponding
- 15 individual endo or exo isomers of a compound of formula **II** or by separation of a resulting mixture by standard techniques.

Scheme XII

- 5 As described in Scheme III, a compound of formula IX can readily be made by the process described. As illustrated in Scheme XII, treatment of a compound of formula IX, with an aldehyde reagent of formula R⁷CHO, which can be obtained from commercial sources or readily synthesized by one skilled in the art, yields an imine intermediate of formula XXXIII. Treatment of the intermediate of
- 10 formula XXXIII, with a base such as DBU, results in a compound of formula XXXIV, which is a compound of formula I where M and M' are each a bond and E is CHR⁷. The individual antipodes of a compound of formula XXXIV can be obtained, for example, by use of the corresponding individual antipodes of a compound of
- 15 individual α or β isomers of a compound of formula XXXIV can be obtained by separation of a resulting mixture by standard techniques.

Scheme XIII

- As described in Scheme I a compound of formula IV, where $Z_2=S$, can readily be made by the process described. As illustrated in Scheme XIII, treatment of
- 5 a compound of formula IV, where $Z_2=S$, with an agent capable of reductively eliminating sulfur, such as Raney nickel, yields a compound of formula XXXV, which is a compound of formula I, where M and M' are each a bond and E is CH_2 . The individual antipodes of a compound of formula XXXV can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula
- 10 II or by separation of the racemic mixture by standard techniques. The individual α or β isomers of a compound of formula XXXV can be obtained by separation of a resulting mixture by standard techniques.

Scheme XIV

- 5 Scheme XIV describes a method for preparing compounds of formula I wherein an intermediate of formula II (where Z_1 is O) is saponified to an acid of formula VIII by treatment with a base, such as sodium hydroxide. The acid can then be coupled to an amine of formula H_2N-L-G via a variety of coupling reagents, for example, as described in *The Practice of Peptide Synthesis*, Springer-Verlag, 2nd Ed.,
- 10 Bodanszy, Miklos, 1993 (incorporated herein by reference in its entirety), to yield an amide intermediate of formula IX. The intermediate of formula IX can be treated with a reagent of formula $R^7R^7'-C-X^1X^2$ (where X^1 and X^2 are independently F, Br, Cl, or I, or X^1 and X^2 are taken together along with the carbon to which they are attached to form $C=O$), to yield a compound of formula XXXVI, which is a compound of
- 15 formula I where Z_1 is O, M and M' are bonds and E is CR^7R^7' (such as where one of R^7 and R^7 is H, C_{1-4} alkyl or C_{1-4} haloalkyl and the other is $R^1OC=O$).

- When the intermediate of formula $R^7R^7'-C-X^1X^2$ is a ketone (X^1 and X^2 are taken together with the attached carbon to form $C=O$), amines of formula IX can be condensed with these intermediate carbonyl compounds, for example, in the presence
- 20 of sodium hydroxide in water at a temperature between 0°C and 25°C using the procedures described by D. A. Johnson *et. al.*, *J. Org. Chem.* 31, 897 (1966) and Uozumi *et. al.*, *Tetrahedron Letters*, 42 407-410 (2001). (See Scheme XII above for when the intermediate of formula $R^7R^7'-C-X^1X^2$ is an aldehyde). When the intermediate of formula $R^7R^7'-C-X^1X^2$ is a dihalide (X^1 and X^2 are halogens), the
- 25 condensation can be conducted, for example, in the presence of a base by heating the

mixture of IX and $R^7R^7-C-X^1X^2$ in an inert solvent. Preferred dihalides of formula $R^7R^7-C-X^1X^2$ are ethyl bromofluoroacetate and ethyl bromodifluoroacetate.

Examples of suitable bases include alkali salts of carbonate, such as potassium, sodium and lithium, and hydride bases such as sodium hydride. Examples of inert
5 solvents include ethers such as diethyl ether, tetrahydrofuran and dioxane; esters such as ethyl acetate; amides such as dimethylformamide; and acetonitrile. Although the cyclization of compounds of formula IX and $R^7R^7-C-X^1X^2$ can proceed at room temperature, the reaction is preferably performed by heating above room temperature.

Dihalides, aldehydes and ketones of formula $R^7R^7-C-X^1X^2$ can be prepared by known

- 10 methods and many are commercially available. For example, see March, J. *Advanced Organic Chemistry*, 3rd ed., John Wiley: New York, 1985. Other synthetic routes which can be employed for the conversion of compounds of formula IX to compounds of formula XXXVI are analogous to those found in WO-9414817, US-5,643,855, WO-0107440, WO-9910313, WO-9910312 and JP-46016990 and the
15 references therein. The individual optical isomers of a compound of formula XXXVI (also known as antipodes) can be obtained, for example, by use of the corresponding individual antipodes of a compound of formula II or by separation of the racemic

mixture by standard techniques. The individual α or β isomers of a compound of formula XXXVI can be isolated from the resulting mixture, for example, by standard
20 techniques.

Scheme XV

- As shown in Scheme XV, compounds of formula I where Z₁ is O, M and M' are bonds and E is CR⁷R⁷ can be prepared by transforming the imidazolinones of formula XXVII. The ester of formula XXXVII is hydrolyzed, for example, with sodium hydroxide in a solvent such as methanol or ethanol at about 0°C to 50°C to provide the corresponding carboxylic acid. The acid can be converted to the corresponding ester (R⁷ = COOR¹) or amide (R⁷ = CONR¹R¹) of formula XXXVIII by treatment with thionyl chloride or oxalyl chloride to form the acid chloride followed by treatment with the appropriate alcohol R¹-OH or amine H-NR¹R¹, respectively.

Treatment of the acid chloride with ammonia produces the unsubstituted amide, R⁷ = CONH₂, which can be dehydrated such as by conventional methods to form the nitrile, R⁷ = CN.

- Alternatively, esterification of the carboxylic acid can be achieved by reacting the acid with an appropriate alkyl halide in the presence of a base such as potassium carbonate in an inert solvent such as dimethylformamide, for example, at about 0°C to 60°C to give the ester of formula XXXVIII (R⁷ = COOR¹).

- The amide of compound XXXVIII (R⁷ = CONR¹R¹), can also be obtained by 1,3-dicyclohexylcarbodiimide (DCC) coupling between the carboxylic acid and the appropriate amine H-NR¹R¹. The DCC coupling procedure is described by Bodanszky, M. and Bodanszky, A; in *Practice of Peptide Synthesis*, Vol. 21; Springer-Verlag, New York: (1984).

- Reduction of the carboxylic acid or ester with a reducing agent such as aluminum hydride in solvent such as tetrahydrofuran, for example, at 0°C to 80°C produces the corresponding alcohol, a compound of formula XXXVIII wherein R⁷ = CH₂OH.

- Treatment of the alcohol with an R^{13} -halide (where R^{13} is alkyl (e.g., C_1-C_6 alkyl) or substituted alkyl; alkenyl (e.g., C_1-C_6 alkenyl) or substituted alkenyl; cycloalkyl (e.g., C_3-C_6 cycloalkyl) or substituted cycloalkyl; heterocycloalkyl or substituted heterocycloalkyl; aryl or substituted aryl (e.g., substituted by alkyl and additional substituents); heterocyclo or substituted heterocyclo (e.g., heteroaryl or substituted heteroaryl, such as heteroaryl substituted by alkyl and additional substituents), in the presence of a base such as potassium carbonate, in an inert solvent such as acetonitrile, produces compounds of formula XXXVIII, wherein $R^7 = CH_2OR^{13}$.
- 10 Other R^7 substitutions are also obtainable from the CO_2Et group of the compounds of formula XXXVII using functional group transformations, such as those known by one skilled in the art.

Scheme XVI

- 5 Scheme XVI describes another approach to incorporating additional substitution onto a compound of formula I. As illustrated in Scheme XVI, a compound of formula XXXIX, which can be prepared in accordance with the above Schemes, can be incubated in the presence of a suitable enzyme or microorganism resulting in the formation of a hydroxylated analog of formula XL. Such a process
- 10 can be employed to yield regiospecific as well as enantiospecific incorporation of a hydroxyl group into a molecule of formula XXXIX by a specific microorganism or by a series of different microorganisms. Such microorganisms can, for example, be bacterial, yeast or fungal in nature and can be obtained from distributors such as ATCC or identified for use in this method such as by methods known to one skilled in
- 15 the art. Compound XL is a compound of formula I where Y is as described above and A₁ and A₂ are preferably CR⁷.

Scheme XVII

5 Scheme XVII describes another approach to incorporating additional substitution onto a compound of formula I. As illustrated in Scheme XVII, a compound of formula XLI, which can be prepared in accordance with the above Schemes, can be incubated in the presence of a suitable enzyme or microorganism resulting in the formation of a diol analog of formula XLII. Such a process can be employed to yield regiospecific as well as enantiospecific transformation of a compound of formula XLI to a 1-2 diol of formula XLII by a specific microorganism or by a series of different microorganisms. Such microorganisms can, for example, be bacterial, yeast or fungal in nature and can be obtained from distributors such as ATCC or identified for use in this method such as by methods known to one skilled in the art. Compound XLII is a compound of formula I where Y is as described above and A₁ and A₂ are preferably CR⁷.

The present invention also provides the methods of Schemes XVI and XVII.

20 Thus, in one embodiment, the present invention provides a method for preparation of a compound of the following formula XL, or salt thereof:

where the symbols are as defined herein,
 comprising the steps of contacting a compound of the following formula XXXIX, or
 salt thereof:

XXXIX

5

where the symbols are as defined above;
 with an enzyme or microorganism capable of catalyzing the hydroxylation of said
 compound XXXIX to form said compound XL, and effecting said hydroxylation.

10

In another preferred embodiment, the present invention provides a method
 for preparation of a compound of the following formula XLII, or salt thereof:

XLII

15

where the symbols are as defined herein,
 comprising the steps of contacting a compound of the following formula XLI, or salt
 thereof:

20

XLI

where the symbols are as defined above;
with an enzyme or microorganism capable of catalyzing the opening of the epoxide ring of compound XLI to form the diol of said compound XLII, and effecting said ring opening and diol formation.

- 5 All stereoconfigurations of the unspecified chiral centers of the compounds of the formulae XXXIX, XL, XLI, and XLII are contemplated in the methods of the present invention, either alone (that is, substantially free of other stereoisomers) or in admixture with other stereoisomeric forms. Conversion of one isomer selectively (e.g., hydroxylation of the exo isomer preferentially to hydroxylation of the endo isomer) when contacting an isomeric mixture is a preferred embodiment of the invention. Conversion to one isomer selectively (e.g., hydroxylation on the exo face "exo isomer" preferentially to the endo face "endo isomer" or regioselective opening of an epoxide to form only one of two possible regioisomers of a trans diol) is a preferred embodiment of the invention. Hydroxylation of an achiral intermediate to form a single optical isomer of the hydroxylated product is also a preferred embodiment of the invention. Resolution of a racemic mixture of an intermediate by selective hydroxylation, or epoxide ring opening and diol formation, to generate one of the two possible optical isomers is also a preferred embodiment of the invention. The term "resolution" as used herein denotes partial, as well as, preferably, complete resolution.

The terms "enzymatic process" or "enzymatic method", as used herein, denote a process or method of the present invention employing an enzyme or microorganism. The term "hydroxylation", as used herein, denotes the addition of a hydroxyl group to a methylene group as described above. Hydroxylation can be achieved, for example, by contact with molecular oxygen according to the methods of the present invention. Diol formation can be achieved, for example, by contact with water according to the methods of the present invention. Use of "an enzyme or microorganism" in the present methods includes use of two or more, as well as a single, enzyme or microorganism.

- 30 The enzyme or microorganism employed in the present invention can be any enzyme or microorganism capable of catalyzing the enzymatic conversions described herein. The enzymatic or microbial materials, regardless of origin or purity, can be employed in the free state or immobilized on a support such as by physical adsorption or entrapment. Microorganisms or enzymes suitable for use in the present invention can be selected by screening for the desired activity, for example, by contacting a candidate microorganism or enzyme with a starting compound XXXIX or XLI or salt thereof, and noting conversion to the corresponding compound XL or

XLII or salt thereof. The enzyme may, for example, be in the form of animal or plant enzymes or mixtures thereof, cells of microorganisms, crushed cells, extracts of cells, or of synthetic origin.

Exemplary microorganisms include those within the genera: *Streptomyces* or *Amycolatopsis*. Particularly preferred microorganisms are those within the species *Streptomyces griseus*, especially *Streptomyces griseus* ATCC 10137, and *Amycolatopsis orientalis* such as ATCC 14930, ATCC 21425, ATCC 35165, ATCC 39444, ATCC 43333, ATCC 43490, ATCC 53550, ATCC 53630, and especially ATCC 43491. The term "ATCC" as used herein refers to the accession number of the American Type Culture Collection, 10801 University Blvd., Manassas Virginia 20110-2209, the depository for the organism referred to. It should be understood that mutants of these organisms are also contemplated by the present invention, for use in the methods described herein, such as those modified by the use of chemical, physical (for example, X-rays) or biological means (for example, by molecular biology techniques).

Preferred enzymes include those derived from microorganisms, particularly those microorganisms described above. Enzymes may be isolated, for example, by extraction and purification methods such as by methods known to those of ordinary skill in the art. An enzyme may, for example, be used in its free state or in immobilized form. One embodiment of the invention is that where an enzyme is adsorbed onto a suitable carrier, e.g., diatomaceous earth (porous Celite Hyflo Supercel), microporous polypropylene (Enka Accurel® polypropylene powder), or a nonionic polymeric adsorbent such as Amberlite® XAD-2 (polystyrene) or XAD-7 (polyacrylate) from Rohm and Haas Co. When employed to immobilize an enzyme, a carrier may control the enzyme particle size and prevent aggregation of the enzyme particles when used in an organic solvent. Immobilization can be accomplished, for example, by precipitating an aqueous solution of the enzyme with cold acetone in the presence of the Celite Hyflo Supercel followed by vacuum drying, or in the case of a nonionic polymeric adsorbent, incubating enzyme solutions with adsorbent on a shaker, removing excess solution and drying enzyme-adsorbent resins under vacuum. While it is desirable to use the least amount of enzyme possible, the amount of enzyme required will vary depending upon the specific activity of the enzyme used.

Hydroxylation as described above can occur *in vivo*. For example, liver enzyme can selectively, relative to the endo isomer, hydroxylate the exo isomer of a compound of the present invention. In conducting the methods of the present invention outside the body, liver microsomal hydroxylase can be employed as the enzyme for catalysis.

These processes may also be carried out using microbial cells containing an enzyme having the ability to catalyze the conversions. When using a microorganism to perform the conversion, these procedures are conveniently carried out by adding the cells and the starting material to the desired reaction medium.

5 Where microorganisms are employed, the cells may be used in the form of intact wet cells or dried cells such as lyophilized, spray-dried or heat-dried cells, or in the form of treated cell material such as ruptured cells or cell extracts. Cell extracts immobilized on Celite® or Accurel® polypropylene as described earlier may also be employed. The use of genetically engineered organisms is also contemplated. The
10 host cell may be any cell, e.g. *Escherichia coli*, modified to contain a gene or genes for expressing one or more enzymes capable of catalysis as described herein.

Where one or more microorganisms are employed, the enzymatic methods of the present invention may be carried out subsequent to the fermentation of the microorganism (two-stage fermentation and conversion), or concurrently therewith,
15 that is, in the latter case, by *in situ* fermentation and conversion (single-stage fermentation and conversion).

Growth of the microorganisms can be achieved by one of ordinary skill in the art by the use of an appropriate medium. Appropriate media for growing
microorganisms include those which provide nutrients necessary for the growth of the
20 microbial cells. A typical medium for growth includes necessary carbon sources, nitrogen sources, and elements (e.g. in trace amounts). Inducers may also be added. The term "inducer", as used herein, includes any compound enhancing formation of the desired enzymatic activity within the microbial cell.

Carbon sources can include sugars such as maltose, lactose, glucose,
25 fructose, glycerol, sorbitol, sucrose, starch, mannitol, propylene glycol, and the like; organic acids such as sodium acetate, sodium citrate, and the like; and alcohols such as ethanol, propanol and the like.

Nitrogen sources can include N-Z amine A, corn steep liquor, soy bean meal, beef extracts, yeast extracts, molasses, baker's yeast, tryptone, nutrisoy,
30 peptone, yeastamin, amino acids such as sodium glutamate and the like, sodium nitrate, ammonium sulfate and the like.

Trace elements can include magnesium, manganese, calcium, cobalt, nickel, iron, sodium and potassium salts. Phosphates may also be added in trace or, preferably, greater than trace amounts.

35 The medium employed can include more than one carbon or nitrogen source or other nutrient.

Preferred media for growth include aqueous media.

The agitation and aeration of the reaction mixture affects the amount of oxygen available during the conversion process when conducted, for example, in shake-flask cultures or fermentor tanks during growth of microorganisms.

Incubation of the reaction medium is preferably at a temperature between about 4 and about 60°C. The reaction time can be appropriately varied depending upon the amount of enzyme used and its specific activity. Reaction times may be reduced by increasing the reaction temperature and/or increasing the amount of enzyme added to the reaction solution.

It is also preferred to employ an aqueous liquid as the reaction medium, although an organic liquid, or a miscible or immiscible (biphasic) organic/aqueous liquid mixture, may also be employed. The amount of enzyme or microorganism employed relative to the starting material is selected to allow catalysis of the enzymatic conversions of the present invention.

Solvents for the organic phase of a biphasic solvent system may be any organic solvent immiscible in water, such as toluene, cyclohexane, xylene, trichlorotrifluoroethane and the like. The aqueous phase is conveniently of water, preferably deionized water, or a suitable aqueous buffer solution, especially a phosphate buffer solution. The biphasic solvent system preferably comprises between about 10 to 90 percent by volume of organic phase and between about 90 to 10 percent by volume of aqueous phase, and most preferably contains at or about 20 percent by volume of organic phase and at or about 80 percent by volume of the aqueous phase.

An exemplary embodiment of such processes starts with preparation of an aqueous solution of the enzyme(s) or microbes to be used. For example, the preferred enzyme(s) or microbes can be added to a suitable amount of an aqueous solvent, such as phosphate buffer or the like. This mixture is preferably adjusted to and maintained at a desired pH.

The compounds XL and XLII produced by the processes of the present invention can be isolated and purified, for example, by methods such as extraction, distillation, crystallization, and column chromatography.

Other compounds of the formula I, such as compounds where M is CR^7R^7 or compounds where one of M or M' is other than a bond and E is CHR^7 , can be readily prepared by one of ordinary skill in the art, for example, by methods analogous to those described herein.

Exemplary methods for the preparation of compounds of the formula II (employed in the above Schemes) are illustrated in the following Figures 1 to 3.

Figure 1.

As shown in Figure 1, an ethyl glyoxylate derivative can be treated with saturated aq. NH_4Cl and the appropriate diene of formula A to give the compound of formula II, where $\text{Q} = \text{H}$. Such a cyclization can be enhanced by the addition of metal salts, such as but not limited to Ytterbium (III) trifluoromethanesulfonate, as described in the documents cited previously. An intermediate of formula II can be made where $\text{Q} \neq \text{H}$, by protection of the secondary nitrogen with a protection group such as a BOC, followed by treatment with reactive intermediates of formula Q-X, where X represents a leaving group or X is an electrophilic center which can react to ultimately make up the definition of Q as described earlier, in the presence of base, such as LDA, or a coupling agent as is readily known by one skilled in the art, followed by deprotection of the BOC group with an acid such as saturated ethanolic HCl.

Figure 2.

As shown in Figure 2 (with preferred conditions indicated therein), the

- 5 commercially available chiral (pure D or L) intermediate N-(tert-butoxycarbonyl)-L-4-hydroxyproline, B, can be treated with a reducing agent, such as $\text{BH}_3 \cdot \text{THF}$, to yield a primary alcohol, which can then be selectively protected with an agent such as TBSOTf, in the presence of base (e.g., 2,6-lutidine), to yield the intermediate alcohol C. The secondary alcohol of C can then be differentially protected by treatment with
- 10 an agent such as TsCl, in the presence of a base (e.g., pyridine), followed by deprotection of the primary alcohol (which can be achieved by treatment with an acid, such as para-toluenesulphonic acid), to yield intermediate alcohol D. The resulting alcohol D can be oxidized, such as under standard Swern conditions, to yield the corresponding aldehyde intermediate E. The aldehyde intermediate E can be directly

treated with benzylamine and diethyl cyanophosphonate to give intermediate F. Treatment of intermediate F with a base, such as Hünig's base, with heating, yields the bicyclic intermediate G. Treatment of G with a base, such as sodium methoxide, converts the nitrile intermediate G directly to the ester intermediate H. Treatment of
 5 intermediate H with an agent to remove the benzyl group, such as palladium on charcoal with hydrogen gas, results in the formation of an intermediate of Formula IIa where Q=Hydrogen. Alternatively, the intermediate of formula H can be treated with reactive intermediates of formula Q-X, where X represents a leaving group or X is an electrophilic center which can react to ultimately make up the definition of Q as
 10 described earlier, in the presence of base, such as LDA, or a coupling agent as is readily known by one skilled in the art, which, after treatment with an agent such as palladium on charcoal, yields an intermediate of formula IIa where Q≠H. The various intermediates of Figure 2 can be purified, for example, by silica purification, or can, for example, be simply carried forward *in situ* to the next step (e.g., converting
 15 D to F without isolating E).

The method of Figure 2 is novel, as are intermediates prepared therein, all of which form part of the present invention.

Thus, for example, the following method is novel as are the individual steps and intermediates produced therein (e.g., E, F, G, H, J and IIa): a method for the
 20 preparation of a compound of the following formula IIa:

where

- 25 BOC is *t*-butoxycarbonyl; and
 Q is H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocycloalkyl or substituted heterocycloalkyl, arylalkyl or substituted arylalkyl, alkynyl or substituted alkynyl, aryl or substituted aryl, heterocyclo

or substituted heterocyclo halo, CN, $R^1OC=O$, $R^4C=O$, $R^5R^6NC=O$,
 $HO-CR^7R^7$, nitro, R^1OCH_2 , R^1O , NH_2 , $C=OSR^1$, SO_2R^1 or NR^4R^5 ;

comprising the steps of

(i) treating a compound of the following formula B:

5

with a reducing agent to reduce the carboxylic acid group to hydroxymethyl, followed
 by protection of said hydroxy to yield a compound of the following formula C:

10

where Pro1 is a hydroxyl protecting group;

(ii) protecting the unprotected hydroxyl group of the compound of formula

15 C, followed by deprotection of Pro1-O- to form hydroxyl, yielding a compound of the
 following formula D:

20 where Pro2 is a protecting group;

(iii) oxidizing the hydroxymethyl group of D, yielding an aldehyde of the
 following formula E:

(iii) treating E with benzylamine and diethyl cyanophosphonate, yielding a compound of the following formula F:

5

(iv) treating said compound of the formula F with a base with heating to yield a compound of the following formula G:

10

(v) treating said compound of the formula G with a base to convert the nitrile group to methoxycarbonyl yielding a compound of the following formula H:

15

and (vi) removing the benzyl group of said compound of the formula H to form said compound of the formula IIa, wherein, optionally, said compound of the formula H is contacted with a compound Q-X, where X is a leaving group or X is an

20

electrophilic center which can react to form a group Q, prior to said removal to form compounds of the formula IIa where Q is other than hydrogen.

- The method of Figure 2 is especially useful for the preparation of unnatural amino acids IIa which can be employed, by methods analogous to those using
- 5 compounds of the formula II, in the preparation of the present compounds of formula I.

Figure 3.

As shown in Figure 3 (with preferred conditions indicated therein), the activated imine intermediate M can be generated by the reactions of an activated

5 sulfonfyl isocyanate, such as p-toluenesulfonyl isocyanate, with ethyl glyoxylate and heating. Imine M can undergo cyclization with an appropriate diene intermediate of formula A to give an intermediate of formula II'. Such a cyclization can be enhanced by the addition of metal salts, such as but not limited to Ytterbium (III) trifluoromethanesulfonate, as described in the references cited previously. The tosyl

10 protecting group can be removed from intermediate II' by a number of reagents, such as those known to one skilled in the art, such as hydrogen bromide in acetic acid, to yield an intermediate of formula II. The intermediate of formula II' can be treated with reactive intermediates of formula Q-X, where X represents a leaving group or X is an electrophilic center which can react to ultimately make up the definition of Q as

15 described earlier, in the presence of base, such as LDA, or a coupling agent as is readily known by one skilled in the art, to yield the intermediate of formula T. The tosyl protecting group can be removed from intermediate T by a number of reagents known to one skilled in the art, such as hydrogen bromide in acetic acid, to yield an intermediate of formula II, where Q≠H.

20

Preferred Compounds

A preferred subgenus of the compounds of the present invention includes compounds of the formula I or salts thereof wherein one or more, preferably all, of the following substituents are as defined below:

- 5 G is an aryl (especially, phenyl or naphthyl) or heterocyclo (e.g., heteroaryl) group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions, preferably with hydrogen, C₁₋₆ alkyl, alkyl substituted with one or more halogens (e.g., perfluoroalkyl), heterocyclo, alkyl substituted with hydroxy, allyl or substituted allyl, alkynyl, Cl, F, Br, I, CN, R¹OC=O, R¹C=O, R¹HNC=O, R¹R²NC=O, HO CR³R^{3'}, nitro, R¹OCH₂, R¹O, NH₂, NR⁴R⁵, SR¹, S=OR¹, SO₂R¹, SO₂OR¹, SO₂NR¹R^{1'}, (R¹O)(R^{1'}O)P=O, (R¹)(R^{1'})P=O, or (R¹)(NHR¹)P=O;
- 10 E is C=Z₂, CHR⁷, SO₂, P=OR², or P=OOR²;
- Z₁ is O, S, or NR⁶;
- 15 Z₂ is O, S, or NR⁶;
- A₁ is CR⁷ (especially, CH);
- A₂ is CR⁷ (especially, CH);
- Y is J-J'-J'' where J is (CR⁷R^{7'})_n and n = 0-2, J' is a bond or NH, NR⁶, C=O, cycloalkyl (especially, cyclopropyl or cyclobutyl), or cycloalkenyl (especially, cyclobutenyl or cyclopentenyl), and J'' is (CR⁷R^{7'})_n and n = 1-2, where Y is not a bond;
- 20 W is CR⁷R^{7'}—CR⁷R^{7'}, CR⁸=CR^{8'}, CR⁷R^{7'}—C=O, NR⁹—CR⁷R^{7'}, cycloalkyl (especially, cyclopropyl or cyclobutyl) or cycloalkenyl (especially, cyclobutenyl or cyclopentenyl);
- 25 Q is H, C₁₋₆ alkyl, alkyl substituted with one or more halogens (e.g., perfluoroalkyl), C₁₋₆ alkyl substituted with hydroxy, alkenyl (e.g., allyl), alkynyl, Cl, F, Br, I, arylalkyl (e.g. benzyl) or substituted arylalkyl, CN, R¹OC=O, R⁴C=O, R⁵R⁶NC=O, HO CR⁷R^{7'}, R¹OCH₂, R¹O, NH₂, or NR⁴R⁵;
- M is a bond or NR¹⁰, and M' is a bond or NR¹⁰, with the proviso that at least one of M or M' must be a bond;
- 30

L is a bond, $(CR^7R^7)_n$, NH, or NR^5 where $n = 0-1$;

R^1 and $R^{1'}$ are each independently H, alkyl, perfluoroalkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, or heterocycloalkyl;

R^2 is alkyl, perfluoroalkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, or
5 heterocycloalkyl;

R^3 and $R^{3'}$ are each independently H, alkyl, perfluoroalkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, Cl, F, Br, I, CN, alkoxy, amino, NR^1R^2 , thiol, or alkylthio;

R^4 is H, alkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, $R^1C=O$,
10 $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^{1'}$;

R^5 is alkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, $R^1C=O$,
 $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^{1'}$;

R^6 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl,
15 heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR^1 , $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^{1'}$;

R^7 and R^7 are each independently H, alkyl, perfluoroalkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, aryl, arylalkyl, Cl, F, Br, I, CN, OR^1 , nitro,
20 hydroxylamine, hydroxylamide, amino, NHR^4 , NR^2R^5 , NOR^1 , thiol, alkylthio, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^{1'}$;

R^8 and $R^{8'}$ are each independently H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, heterocycloalkyl or substituted heterocycloalkyl,
25 aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN, OR^1 , amino, NHR^4 , NR^2R^5 , NOR^1 , alkylthio or substituted alkylthio, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^{1'}$;

R^9 and $R^{9'}$ are each independently H, alkyl, alkenyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, aryl, arylalkyl, CN, OH, OR^1 , $R^1C=O$,
30 $R^1OC=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^{1'}$; and

R^{10} is H, alkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, aryl, arylalkyl, CN, OH, OR^1 , $R^1C=O$, $R^1OC=O$, $R^1R^1'NC=O$, SO_2OR^1 , or $SO_2NR^1R^1'$.

- 5 A more preferred subgenus of the compounds of the invention includes compounds of the formula I or salts thereof wherein one or more, preferably all, of the following substituents are as defined below:

G is an aryl or heteroaryl group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions with hydrogen, C_1-C_3 alkyl, allyl or substituted allyl, alkynyl, Cl, F, Br, I, CN, $R^1C=O$, $R^1HNC=O$, $R^1R^2NC=O$, haloalkyl (especially, perfluoroalkyl), C_1-C_3 hydroxyalkyl, $HOCH_2R^3$, nitro, R^1OCH_2 , R^1O , NR^4R^5 , or SR^1 ;

E is $C=Z_2$, CHR^7 or SO_2 ;

Z_1 is O, S, or NCN;

- 15 Z_2 is O, S, or NCN;

A_1 is CR^7 (especially, CH);

A_2 is CR^7 (especially, CH);

Y is J, cyclopropyl, or cyclobutyl, where $J=(CR^7R^7)_n$ and $n=1-3$;

W is $CR^7R^7-CR^7R^7$, $CR^8=CR^8$, $CR^7R^7-C=O$, cyclopropyl, or cyclobutyl;

- 20 Q is hydrogen, C_1-C_4 alkyl, alkynyl, Cl, F, Br, I, CN, $R^1OC=O$, $R^4C=O$, $R^5R^6NC=O$, haloalkyl (especially, perfluoroalkyl), C_1-C_6 hydroxyalkyl, $HOCH_2R^7$, R^1OCH_2 , R^1O , NH_2 or NR^4R^5 ;

M is a bond and M' is a bond;

L is a bond, $(CR^7R^7)_n$, NH, or NR^5 , where $n=0-1$;

- 25 R^1 and R^1' are each independently H, alkyl, cycloalkyl, heterocycloalkyl, or perfluoroalkyl;

R^2 is alkyl, cycloalkyl, heterocycloalkyl, or perfluoroalkyl;

R^3 and R^3' are each independently H, alkyl, perfluoroalkyl, Cl, F, Br, I, CN, alkoxy, amino, NR^1R^2 , thiol, or alkylthio;

R^4 is H, alkyl, cycloalkyl, heterocycloalkyl, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^{1'}$;

R^5 is alkyl, cycloalkyl, heterocycloalkyl, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^{1'}$;

5 R^7 and $R^{7'}$ are each independently H, alkyl, arylalkyl, heteroaryl, perfluoroalkyl, heteroarylalkyl, Cl, F, Br, I, CN, OR^1 , amino, NHR^4 , NR^2R^5 , NOR^1 , thiol, alkylthio, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^{1'}$; and

R^{10} is H, alkyl, cycloalkyl, heterocycloalkyl (especially, heteroarylalkyl), aryl, heteroaryl (such as heteroarylium), arylalkyl, CN, $R^1C=O$, $R^1R^{1'}NC=O$,
10 SO_2OR^1 , or $SO_2NR^1R^{1'}$.

Another more preferred subgenus of the compounds of the invention includes compounds of the formula I or salts thereof wherein one or more, preferably all, of the following substituents are as defined below:

15 G is an aryl or heteroaryl group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions with hydrogen, C_1-C_3 alkyl, allyl or substituted allyl, alkynyl, Cl, F, Br, I, CN, $R^1C=O$, $R^1HNC=O$, haloalkyl (especially, perfluoroalkyl), C_1-C_3 hydroxyalkyl, $HO-CR^3R^3'$, nitro, R^1OCH_2 , R^1O , NR^4R^5 , or SR^1 ;

20 E is $C=Z_2$;

Z_1 is O;

Z_2 is O or NCN;

A_1 is CR^7 (especially, CH);

A_2 is CR^7 (especially, CH);

25 Y is J, where $J=(CR^7R^{7'})_n$ and $n=1-3$;

W is $CR^7R^{7'}-CR^7R^{7'}$, $CR^8=CR^8$, or $CR^7R^{7'}-C=O$;

Q is hydrogen, C_1-C_4 alkyl, alkynyl, Cl, F, Br, I, CN, $R^4C=O$, $R^5R^6NC=O$, haloalkyl (especially, perfluoroalkyl), C_1-C_6 hydroxyalkyl, $HO-CR^7R^{7'}$, R^1OCH_2 , R^1O , NH_2 or NR^4R^5 ;

30 M is a bond and M' is a bond;

L is a bond;

R¹ and R^{1'} are each independently H, alkyl, or perfluoroalkyl;

R² is alkyl, or perfluoroalkyl;

R³ and R^{3'} are each independently H, alkyl, perfluoroalkyl, Cl, F, Br, I, CN, alkoxy,

5 amino, NR¹R², thiol, or alkylthio;

R⁴ is H, alkyl, R¹C=O, R¹NHC=O, or SO₂NR¹R^{1'};

R⁵ is alkyl, R¹C=O, R¹NHC=O, or SO₂NR¹R^{1'};

R⁷ and R^{7'} are each independently H, alkyl, arylalkyl, heteroaryl, perfluoroalkyl,

heteroarylalkyl, Cl, F, Br, I, CN, OR¹, amino, NHR⁴, NR²R⁵, NOR¹, R¹C=O,

10 R¹NHC=O, or SO₂NR¹R^{1'}; and

R¹⁰ is H, alkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, CN, R¹C=O, R¹R^{1'}NC=O,
or SO₂NR¹R^{1'}.

A particularly preferred subgenus of the compounds of the invention includes
15 compounds of the formula I or salts thereof wherein one or more, preferably all, of the
substituents are as defined below:

G is an aryl (especially, phenyl or naphthyl) or heterocyclo (especially benzo-
fused heterocyclic groups such as indole, benzothiophene,
benzothiazole, benzothiadiazole, benzisoxazole, benzoxadiazole,
20 oxidobenzothiophene, benzofuran or benzopyran) group, where said
group is mono- or polycyclic, and which is optionally substituted at one
or more positions, such as 1 to 5 positions (preferably 1 to 2 positions),
with substituents selected from one or more of hydrogen, NH₂, alkyl
(especially having 1 to 4 carbons) or substituted alkyl (especially
25 having 1 to 4 carbons and substituted with halo, such as the
substituted alkyl group CF₃), halo (especially F, Cl, Br or I), heterocyclo
(such as tetrazole or oxazole), CN, nitro, SR¹ or R¹O (especially where
R¹ is alkyl);

E is C=Z₂ or CHR⁷ (especially where R⁷ is hydrogen);

30 Z₁ is O or S;

- Z_2 is O, S, or NR^6 (especially where R^6 is CN or phenyl);
- A_1 is CR^7 (especially where R^7 is hydrogen);
- A_2 is CR^7 (especially where R^7 is hydrogen);
- Y is $(CR^7R^7)_n$ and $n = 1-2$ (especially where R^7 and R^7 are hydrogen);
- 5 W is $CR^7R^7-CR^7R^7$, $CR^8=CR^8$, or $NR^9-CR^7R^7$ (especially where R^7 , R^7 , R^8 and R^8 are hydrogen and R^9 is as defined in this preferred subgenus);
- Q is H, alkyl (especially having 1 to 4 carbons), alkenyl (especially having 1 to 4 carbon atoms), arylalkyl (especially benzyl) or substituted arylalkyl (especially substituted benzyl, such as halo-substituted benzyl);
- 10 M is a bond or NH (especially a bond), and M' is a bond;
- L is a bond;
- R^1 and R^1 are each independently alkyl (especially having 1 to 4 carbons) or substituted alkyl (especially having 1 to 4 carbons and substituted with halo), heterocyclo (such as imidazole or isoxazole) or substituted
- 15 heterocyclo (such as imidazole substituted with methyl), aryl (especially phenyl) or substituted aryl (especially phenyl substituted with one or more of halo, nitro, halo-substituted alkyl such as CF_3 , or alkyl having 1 to 4 carbons), arylalkyl (especially benzyl or phenethyl) or substituted arylalkyl (especially substituted benzyl such as halo-
- 20 and/or nitro-substituted benzyl); and
- R^9 and R^9 are each independently H, alkyl (especially having 1 to 4 carbons), alkenyl (especially having 1 to 4 carbons), arylalkyl (especially benzyl), $R^1C=O$, $R^1OC=O$, $R^1NHC=O$, or SO_2R^1 (especially where each R^1 is independently as defined in this preferred subgenus).

- 25 In this particularly preferred subgenus, G-L- can be, for example, an optionally substituted naphthyl or optionally substituted fused bicyclic heterocyclic group such as an optionally substituted benzo-fused heterocyclic group (e.g., bonded to the remainder of the molecule through the benzene portion), especially such group
- 30 wherein the heterocyclic ring bonded to benzene has 5 members exemplified by

benzoxazole, benzothiazole, benzothiadiazole, benzoxadiazole or benzothiophene, for example:

(e.g.,

)

where X is halo (especially Cl), OH , CN , NO_2 or

U is O or S (where S can optionally be oxygenated, e.g., to SO);

5 U^1 is CH_3 or CF_3 ;

each U^2 is independently N , CH or CF ;

U^3 is N , O or S ;

U^4 and U^5 , together with the atoms to which they are bonded, form an optionally substituted 5-membered heterocyclic ring which can be partially

10 unsaturated or aromatic and which contains 1 to 3 ring heteroatoms;

each U^6 is independently CH or N ; and

(p) denotes optional double bond(s) within the ring formed by U^3 , U^4

and U^5 .

Especially preferred are compounds of the formula I having the following

15 structure, or salts thereof:

where R^9 and U^2 are as defined above, such as optionally substituted arylcarbonyl or optionally substituted aryloxy carbonyl, and X^a is an aryl substituent, such as nitro.

- 5 Also especially preferred are compounds of the formula I having the following structure or salts thereof:

where

- 10 n is 1 or 2;

Q is H, methyl or ethyl;

- 15 each G^a is independently CN, NO_2 , CF_3 , Cl, Br, F, OCH_3 , SCH_3 , I, CH_3 , $C(O)-CH_3$, or

G^b is CN, H, F, Br, NO_2 or

G^c is CH or N;

G^d is S or O;

- 20 G^e is H or F;

Use and Utility

10 The compounds of the present invention modulate the function of nuclear hormone receptors (NHR), and include compounds which are, for example, agonists, partial agonists, antagonists or partial antagonists of the androgen receptor (AR), the estrogen receptor (ER), the progesterone receptor (PR), the glucocorticoid receptor (GR), the mineralocorticoid receptor (MR), the steroid and xenobiotic receptor

15 (SXR), other steroid binding NHR, the Orphan receptors or other NHR. Selective modulation of one such NHR relative to others within the NHR family is preferred.

"Modulation" includes, for example, activation (e.g., agonist activity such as selective androgen receptor agonist activity) or inhibition (e.g., antagonist activity).

The present compounds are thus useful in the treatment of NHR-associated conditions. A "NHR-associated condition", as used herein, denotes a condition or disorder which can be treated by modulating the function of a NHR in a subject, wherein treatment comprises prevention (e.g., prophylactic treatment), partial alleviation or cure of the condition or disorder. Modulation may occur locally, for example, within certain tissues of the subject, or more extensively throughout a subject being treated for such a condition disorder.

The compounds of the present invention are useful for the treatment of a variety of conditions and disorders including, but not limited to, those described following:

Compounds of formula I can be applied as agonists, partial agonists, antagonists, or partial antagonists of the estrogen receptor, preferably selectively to that receptor, in an array of medical conditions which involve modulation of the estrogen receptor pathway. Applications of said compounds include but are not limited to: osteoporosis, hot flushes, vaginal dryness, prostate cancer, breast cancer, endometrial cancer, cancers expressing the estrogen receptor such as the aforementioned cancers and others, contraception, pregnancy termination, menopause, amenorrhea, and dysmenorrhea.

Compounds of formula I can be applied as agonists, partial agonists, antagonists or partial antagonists of the progesterone receptor, preferably selectively to that receptor, in an array of medical conditions which involve modulation of the progesterone receptor pathway. Applications of said compounds include but are not limited to: breast cancer, other cancers containing the progesterone receptor, endometriosis, cachexia, contraception, menopause, cyclesynchrony, meningioma, dysmenorrhea, fibroids, pregnancy termination, labor induction and osteoporosis.

Compounds of formula I can be applied as agonists, partial agonists, antagonists or partial antagonists of the glucocorticoid receptor, preferably selectively to that receptor, in an array of medical conditions which involve modulation of the glucocorticoid receptor pathway. Applications of said compounds include but are not

limited to: inflammatory diseases, autoimmune diseases, prostate cancer, breast cancer, Alzheimer's disease, psychotic disorders, drug dependence, non-insulin dependent Diabetes Mellitus, and as dopamine receptor blocking agents or otherwise as agents for the treatment of dopamine receptor mediated disorders.

5 Compounds of formula I can be applied as agonists, partial agonists, antagonists or partial antagonists of the mineralocorticoid receptor, preferably selectively to that receptor, in an array of medical conditions which involve modulation of the mineralocorticoid receptor pathway. Applications of said compounds include but are not limited to: drug withdrawal syndrome and

10 inflammatory diseases.

 Compounds of formula I can be applied as agonists, partial agonists, antagonists or partial antagonists of the aldosterone receptor, preferably selectively to that receptor, in an array of medical conditions which involve modulation of the aldosterone receptor pathway. One application of said compounds includes but is not

15 limited to: congestive heart failure.

 Compounds of formula I can be applied as agonists, partial agonists, antagonists or partial antagonists of the androgen receptor, preferably selectively to that receptor, in an array of medical conditions which involve modulation of the androgen receptor pathway. Applications of said compounds include but are not

20 limited to: hirsutism, acne, seborrhea, Alzheimer's disease, androgenic alopecia, hypogonadism, hyperpilosity, benign prostate hypertrophy, adenomas and neoplasies of the prostate (such as advanced metastatic prostate cancer), treatment of benign or malignant tumor cells containing the androgen receptor such as is the case for breast, brain, skin, ovarian, bladder, lymphatic, liver and kidney cancers, pancreatic cancers

25 modulation of VCAM expression and applications therein for the treatment of heart disease, inflammation and immune modulations, modulation of VEGF expression and the applications therein for use as antiangiogenic agents, osteoporosis, suppressing spermatogenesis, libido, cachexia, endometriosis, polycystic ovary syndrome, anorexia, androgen supplement for age related decreased testosterone levels in men,

30 male menopause, male hormone replacement, male and female sexual dysfunction, and inhibition of muscular atrophy in ambulatory patients. For example, pan AR

modulation is contemplated, with prostate selective AR modulation ("SARM") being particularly preferred, such as for the treatment of early stage prostate cancers.

Compounds of formula I can be applied as (preferably, selective) antagonists of the mutated androgen receptor found in many tumor lines. Examples of such mutants are those found in representative prostate tumor cell lines such as LNCap, (T877A mutation, Biophys. Acta, 187, 1052 (1990)), PCa2b, (L701H & T877A mutations, J. Urol., 162, 2192 (1999)) and CWR22, (H874Y mutation, Mol. Endo., 11, 450 (1997)). Applications of said compounds include but are not limited to: adenomas and neoplasies of the prostate, breast cancer and endometrial cancer.

Compounds of formula I can be applied as agonists, partial agonists, antagonists or partial antagonists of the steroid and xenobiotic receptor, preferably selectively to that receptor, in an array of medical conditions which involve modulation of the steroid and xenobiotic receptor pathway. Applications of said compounds include but are not limited to: treatment of dysregulation of cholesterol homeostasis, attenuation of metabolism of pharmaceutical agents by co-administration of an agent (compound of the present invention) which modulates the P450 regulator effects of SXR.

Along with the aforementioned NHR, there also exist a number of NHR for which the activating or deactivating ligands may not be characterized. These proteins are classified as NHR due to strong sequence homology to other NHR, and are known as the Orphan receptors. Because the Orphan receptors demonstrate strong sequence homology to other NHR, compounds of formula I include those which serve as modulators of the function of the Orphan NHR. Orphan receptors which are modulated by NHR modulators such as compounds within the scope of formula I are exemplified, but not limited to, those listed in Table 1. Exemplary therapeutic applications of modulators of said Orphan receptors are also listed in Table 1, but are not limited to the examples therein.

Table 1. Exemplary Orphan nuclear hormone receptors, form (M = monomeric, D = heterodimeric, H = homodimeric), tissue expression and target therapeutic applications. (CNS=central nervous system)

	<u>Receptor</u>	<u>Form</u>	<u>Tissue Expression</u>	<u>Target Therapeutic Application</u>
	NURR1	M/D	Dopaminergic Neurons	Parkinson's Disease
	RZR β	M	Brain (Pituitary), Muscle	Sleep Disorders

	FXR	D	Liver, Kidney	Metabolic Disorders
	CAR α	H	Liver, Kidney	Metabolic Disorders
20	PXR	H	Liver, Intestine	Metabolic Disorders

The present invention thus provides methods for the treatment of NHR-associated conditions, comprising the step of administering to a subject in need thereof at least one compound of formula I in an amount effective therefor. Other therapeutic agents such as those described below may be employed with the inventive compounds in the present methods (for example, separately, or formulated together as a fixed dose). In the methods of the present invention, such other therapeutic agent(s) can be administered prior to, simultaneously with or following the administration of the compound(s) of the present invention.

The present invention also provides pharmaceutical compositions comprising at least one of the compounds of the formula I capable of treating a NHR-associated condition in an amount effective therefor, and a pharmaceutically acceptable carrier (vehicle or diluent). The compositions of the present invention can contain other
5 therapeutic agents as described below, and can be formulated, for example, by employing conventional solid or liquid vehicles or diluents, as well as pharmaceutical additives of a type appropriate to the mode of desired administration (for example, excipients, binders, preservatives, stabilizers, flavors, etc.) according to techniques such as those well known in the art of pharmaceutical formulation.

10 It should be noted that the compounds of the present invention are, without limitation as to their mechanism of action, useful in treating any of the conditions or disorders listed or described herein such as inflammatory diseases or cancers, or other proliferate diseases, and in compositions for treating such conditions or disorders. Such conditions and disorders include, without limitation, any of those described
15 previously, as well as those described following such as: maintenance of muscle strength and function (e.g., in the elderly); reversal or prevention of frailty or age-related functional decline ("ARFD") in the elderly (e.g., sarcopenia); treatment of catabolic side effects of glucocorticoids; prevention and/or treatment of reduced bone mass, density or growth (e.g., osteoporosis and osteopenia); treatment of chronic
20 fatigue syndrome (CFS); chronic malalgia; treatment of acute fatigue syndrome and muscle loss following elective surgery (e.g., post-surgical rehabilitation); acceleration of wound healing; accelerating bone fracture repair (such as accelerating the recovery of hip fracture patients); accelerating healing of complicated fractures, e.g. distraction osteogenesis; in joint replacement; prevention of post-surgical adhesion formation;
25 acceleration of tooth repair or growth; maintenance of sensory function (e.g., hearing, sight, olfaction and taste); treatment of periodontal disease; treatment of wasting secondary to fractures and wasting in connection with chronic obstructive pulmonary disease (COPD), chronic liver disease, AIDS, weightlessness, cancer cachexia, burn and trauma recovery, chronic catabolic state (e.g., coma), eating disorders (e.g.,

- anorexia) and chemotherapy; treatment of cardiomyopathy; treatment of thrombocytopenia; treatment of growth retardation in connection with Crohn's disease; treatment of short bowel syndrome; treatment of irritable bowel syndrome; treatment of inflammatory bowel disease; treatment of Crohn's disease and ulcerative
- 5 colitis; treatment of complications associated with transplantation; treatment of physiological short stature including growth hormone deficient children and short stature associated with chronic illness; treatment of obesity and growth retardation associated with obesity; treatment of anorexia (e.g., associated with cachexia or aging); treatment of hypercortisolism and Cushing's syndrome; Paget's disease;
- 10 treatment of osteoarthritis; induction of pulsatile growth hormone release; treatment of osteochondrodysplasias; treatment of depression, nervousness, irritability and stress; treatment of reduced mental energy and low self-esteem (e.g., motivation/assertiveness); improvement of cognitive function (e.g., the treatment of dementia, including Alzheimer's disease and short term memory loss); treatment of
- 15 catabolism in connection with pulmonary dysfunction and ventilator dependency; treatment of cardiac dysfunction (e.g., associated with valvular disease, myocardial infarction, cardiac hypertrophy or congestive heart failure); lowering blood pressure; protection against ventricular dysfunction or prevention of reperfusion events; treatment of adults in chronic dialysis; reversal or slowing of the catabolic state of
- 20 aging; attenuation or reversal of protein catabolic responses following trauma (e.g., reversal of the catabolic state associated with surgery, congestive heart failure, cardiac myopathy, burns, cancer, COPD etc.); reducing cachexia and protein loss due to chronic illness such as cancer or AIDS; treatment of hyperinsulinemia including nesidioblastosis; treatment of immunosuppressed patients; treatment of wasting in
- 25 connection with multiple sclerosis or other neurodegenerative disorders; promotion of myelin repair; maintenance of skin thickness; treatment of metabolic homeostasis and renal homeostasis (e.g., in the frail elderly); stimulation of osteoblasts, bone remodeling and cartilage growth; regulation of food intake; treatment of insulin

- resistance, including NIDDM, in mammals (e.g., humans); treatment of insulin resistance in the heart; improvement of sleep quality and correction of the relative hypsomatotropism of senescence due to high increase in REM sleep and a decrease in REM latency; treatment of hypothermia; treatment of congestive heart failure;
- 5 treatment of lipodystrophy (e.g., in patients taking HIV or AIDS therapies such as protease inhibitors); treatment of muscular atrophy (e.g., due to physical inactivity, bed rest or reduced weight-bearing conditions); treatment of musculoskeletal impairment (e.g., in the elderly); improvement of the overall pulmonary function; treatment of sleep disorders; and the treatment of the catabolic state of prolonged
- 10 critical illness; treatment of hirsutism, acne, seborrhea, androgenic alopecia, anemia, hyperpilosity, benign prostate hypertrophy, adenomas and neoplasies of the prostate (e.g., advanced metastatic prostate cancer) and malignant tumor cells containing the androgen receptor, such as is the case for breast, brain, skin, ovarian, bladder, lymphatic, liver and kidney cancers; cancers of the skin, pancreas, endometrium, lung
- 15 and colon; osteosarcoma; hypercalcemia of malignancy; metastatic bone disease; treatment of spermatogenesis, endometriosis and polycystic ovary syndrome; counteracting preeclampsia, eclampsia of pregnancy and preterm labor; treatment of premenstrual syndrome; treatment of vaginal dryness; age related decreased testosterone levels in men, male menopause, hypogonadism, male hormone
- 20 replacement, male and female sexual dysfunction (e.g., erectile dysfunction, decreased sex drive, sexual well-being, decreased libido), male and female contraception, hair loss, Reaven's Syndrome and the enhancement of bone and muscle performance/strength; and the conditions, diseases, and maladies collectively referenced to as "Syndrome X" or Metabolic Syndrome as detailed in Johannsson J.
- 25 *Clin. Endocrinol. Metab.*, 82, 727-34 (1997).

The present compounds have therapeutic utility in the modulation of immune cell activation/proliferation, e.g., as competitive inhibitors of intercellular

ligand/receptor binding reactions involving CAMs (Cellular Adhesion Molecules) and Leukointegrins. For example, the present compounds modulate LFA-ICAM 1, and are particularly useful as LFA-ICAM 1 antagonists, and in the treatment of all conditions associated with LFA-ICAM 1 such as immunological disorders. Preferred utilities for the present compounds include, but are not limited to: inflammatory conditions such as those resulting from a response of the non-specific immune system in a mammal (e.g., adult respiratory distress syndrome, shock, oxygen toxicity, multiple organ injury syndrome secondary to septicemia, multiple organ injury syndrome secondary to trauma, reperfusion injury of tissue due to cardiopulmonary bypass, myocardial infarction or use with thrombolysis agents, acute glomerulonephritis, vasculitis, reactive arthritis, dermatosis with acute inflammatory components, stroke, thermal injury, hemodialysis, leukapheresis, ulcerative colitis, necrotizing enterocolitis and granulocyte transfusion associated syndrome) and conditions resulting from a response of the specific immune system in a mammal (e.g., psoriasis, organ/tissue transplant rejection, graft vs. host reactions and autoimmune diseases including Raynaud's syndrome, autoimmune thyroiditis, dermatitis, multiple sclerosis, rheumatoid arthritis, insulin-dependent diabetes mellitus, uveitis, inflammatory bowel disease including Crohn's disease and ulcerative colitis, and systemic lupus erythematosus). The present compounds can be used in treating asthma or as an adjunct to minimize toxicity with cytokine therapy in the treatment of cancers. The present compounds can be employed in the treatment of all diseases currently treatable through steroid therapy. The present compounds may be employed for the treatment of these and other disorders alone or with other immunosuppressive or antiinflammatory agents. In accordance with the invention, a compound of the formula I can be administered prior to the onset of inflammation (so as to suppress an anticipated inflammation) or after the initiation of inflammation. When provided prophylactically, the immunosuppressive compound(s) are preferably provided in advance of any inflammatory response or symptom (for example, prior to, at, or shortly after the time of an organ or tissue transplant but in advance of any symptoms or organ rejection). The prophylactic administration of a compound of the formula I prevents or attenuates any subsequent inflammatory response (such as, for

example, rejection of a transplanted organ or tissue, etc.) Administration of a compound of the formula I attenuates any actual inflammation (such as, for example, the rejection of a transplanted organ or tissue).

The compounds of the formula I can be administered for any of the uses described herein by any suitable means, for example, orally, such as in the form of tablets, capsules, granules or powders; sublingually; buccally; parenterally, such as by subcutaneous, intravenous, intramuscular, or intrasternal injection or infusion techniques (e.g., as sterile injectable aqueous or non-aqueous solutions or suspensions); nasally, including administration to the nasal membranes, such as by inhalation spray; topically, such as in the form of a cream or ointment; or rectally such as in the form of suppositories; in dosage unit formulations containing non-toxic, pharmaceutically acceptable vehicles or diluents. The present compounds can, for example, be administered in a form suitable for immediate release or extended release. Immediate release or extended release can be achieved by the use of suitable pharmaceutical compositions comprising the present compounds, or, particularly in the case of extended release, by the use of devices such as subcutaneous implants or osmotic pumps. The present compounds can also be administered liposomally.

Exemplary compositions for oral administration include suspensions which can contain, for example, microcrystalline cellulose for imparting bulk, alginic acid or sodium alginate as a suspending agent, methylcellulose as a viscosity enhancer, and sweeteners or flavoring agents such as those known in the art; and immediate release tablets which can contain, for example, microcrystalline cellulose, dicalcium phosphate, starch, magnesium stearate and/or lactose and/or other excipients, binders, extenders, disintegrants, diluents and lubricants such as those known in the art. The compounds of formula I can also be delivered through the oral cavity by sublingual and/or buccal administration. Molded tablets, compressed tablets or freeze-dried tablets are exemplary forms which may be used. Exemplary compositions include those formulating the present compound(s) with fast dissolving diluents such as mannitol, lactose, sucrose and/or cyclodextrins. Also included in such formulations may be high molecular weight excipients such as celluloses (avicel) or polyethylene glycols (PEG). Such formulations can also include an excipient to aid mucosal

adhesion such as hydroxy propyl cellulose (HPC), hydroxy propyl methyl cellulose (HPMC), sodium carboxy methyl cellulose (SCMC), maleic anhydride copolymer (e.g., Gantrez), and agents to control release such as polyacrylic copolymer (e.g. Carbopol 934). Lubricants, glidants, flavors, coloring agents and stabilizers may also
5 be added for ease of fabrication and use.

Exemplary compositions for nasal aerosol or inhalation administration include solutions in saline which can contain, for example, benzyl alcohol or other suitable preservatives, absorption promoters to enhance bioavailability, and/or other solubilizing or dispersing agents such as those known in the art.

10 Exemplary compositions for parenteral administration include injectable solutions or suspensions which can contain, for example, suitable non-toxic, parenterally acceptable diluents or solvents, such as mannitol, 1,3-butanediol, water, Ringer's solution, an isotonic sodium chloride solution, or other suitable dispersing or wetting and suspending agents, including synthetic mono- or diglycerides, and fatty
15 acids, including oleic acid, or Cremaphor.

Exemplary compositions for rectal administration include suppositories which can contain, for example, a suitable non-irritating excipient, such as cocoa butter, synthetic glyceride esters or polyethylene glycols, which are solid at ordinary temperatures, but liquify and/or dissolve in the rectal cavity to release the drug.

20 Exemplary compositions for topical administration include a topical carrier such as Plastibase (mineral oil gelled with polyethylene).

The effective amount of a compound of the present invention can be determined by one of ordinary skill in the art, and includes exemplary dosage amounts for a adult human of from about 1 to 100 (for example, 15) mg/kg of body weight of
25 active compound per day, which can be administered in a single dose or in the form of individual divided doses, such as from 1 to 4 times per day. It will be understood that the specific dose level and frequency of dosage for any particular subject can be varied and will depend upon a variety of factors including the activity of the specific compound employed, the metabolic stability and length of action of that compound,
30 the species, age, body weight, general health, sex and diet of the subject, the mode and time of administration, rate of excretion, drug combination, and severity of the

particular condition. Preferred subjects for treatment include animals, most preferably mammalian species such as humans, and domestic animals such as dogs, cats and the like, subject to NHR-associated conditions.

As mentioned above, the compounds of the present invention can be employed
5 alone or in combination with each other and/or other suitable therapeutic agents useful in the treatment of NHR-associated conditions, e.g., an antibiotic or other pharmaceutically active material.

For example, the compounds of the present invention can be combined with growth promoting agents, such as, but not limited to, TRH, diethylstilbesterol,
10 theophylline, enkephalins, E series prostaglandins, compounds disclosed in U.S. Patent No. 3,239,345, e.g., zeranol, and compounds disclosed in U.S. Patent No. 4,036,979, e.g., sulbenox or peptides disclosed in U.S. Patent No. 4,411,890.

The compounds of the invention can also be used in combination with growth hormone secretagogues such as GHRP-6, GHRP-1 (as described in U.S.
15 Patent No. 4,411,890 and publications WO 89/07110 and WO 89/07111), GHRP-2 (as described in WO 93/04081), NN703 (Novo Nordisk), LY444711 (Lilly), MK-677 (Merck), CP424391 (Pfizer) and B-HT920, or with growth hormone releasing factor and its analogs or growth hormone and its analogs or somatomedins including IGF-1 and IGF-2, or with alpha-adrenergic agonists, such as clonidine or serotonin 5-HT₂
20 agonists, such as sumatriptan, or agents which inhibit somatostatin or its release, such as physostigmine and pyridostigmine. A still further use of the disclosed compounds of the invention is in combination with parathyroid hormone, PTH(1-34) or bisphosphonates, such as MK-217 (alendronate).

A still further use of the compounds of the invention is in combination with
25 estrogen, testosterone, a selective estrogen receptor modulator, such as tamoxifen or raloxifene, or other androgen receptor modulators, such as those disclosed in Edwards, J. P. et al., *Bio. Med. Chem. Let.*, 9, 1003-1008 (1999) and Hamann, L. G. et al., *J. Med. Chem.*, 42, 210-212 (1999).

A further use of the compounds of this invention is in combination with progesterone receptor agonists ("PRA"), such as levonorgestrel, medroxyprogesterone acetate (MPA).

- The compounds of the present invention can be employed alone or in combination with each other and/or other modulators of nuclear hormone receptors or other suitable therapeutic agents useful in the treatment of the aforementioned disorders including: anti-diabetic agents; anti-osteoporosis agents; anti-obesity agents; anti-inflammatory agents; anti-anxiety agents; anti-depressants; anti-hypertensive agents; anti-platelet agents; anti-thrombotic and thrombolytic agents; cardiac glycosides; cholesterol/lipid lowering agents; mineralocorticoid receptor antagonists; phosphodiesterase inhibitors; protein tyrosine kinase inhibitors; thyroid mimetics (including thyroid receptor agonists); anabolic agents; HIV or AIDS therapies; therapies useful in the treatment of Alzheimer's disease and other cognitive disorders; therapies useful in the treatment of sleeping disorders; anti-proliferative agents; and anti-tumor agents.

- Examples of suitable anti-diabetic agents for use in combination with the compounds of the present invention include biguanides (e.g., metformin), glucosidase inhibitors (e.g., acarbose), insulins (including insulin secretagogues or insulin sensitizers), meglitinides (e.g., repaglinide), sulfonylureas (e.g., glimepiride, glyburide and glipizide), biguanide/glyburide combinations (e.g., Glucovance®), thiazolidinediones (e.g., troglitazone, rosiglitazone and pioglitazone), PPAR-alpha agonists, PPAR-gamma agonists, PPAR alpha/gamma dual agonists, SGLT2 inhibitors, glycogen phosphorylase inhibitors, inhibitors of fatty acid binding protein (aP2) such as those disclosed in U.S. Serial No. 09/519,079 filed March 6, 2000, glucagon-like peptide-1 (GLP-1), and dipeptidyl peptidase IV (DP4) inhibitors.

Examples of suitable anti-osteoporosis agents for use in combination with the compounds of the present invention include alendronate, risedronate, PTH, PTH fragment, raloxifene, calcitonin, steroidal or non-steroidal progesterone receptor

agonists, RANK ligand antagonists, calcium sensing receptor antagonists, TRAP inhibitors, selective estrogen receptor modulators (SERM), estrogen and AP-1 inhibitors.

Examples of suitable anti-obesity agents for use in combination with the compounds of the present invention include ap2 inhibitors, such as those disclosed in U.S. Serial No. 09/519,079 filed March 6, 2000, PPAR gamma antagonists, PPAR delta agonists, beta 3 adrenergic agonists, such as AJ9677 (Takeda/Dainippon), L750355 (Merck), or CP331648 (Pfizer) or other known beta 3 agonists as disclosed in U.S. Patent Nos. 5,541,204, 5,770,615, 5,491,134, 5,776,983 and 5,488,064, a lipase inhibitor, such as orlistat or ATL-962 (Alizyme), a serotonin (and dopamine) reuptake inhibitor, such as sibutramine, topiramate (Johnson & Johnson) or axokine (Regeneron), a thyroid receptor beta drug, such as a thyroid receptor ligand as disclosed in WO 97/21993 (U. Cal SF), WO 99/00353 (KaroBio) and GB98/284425 (KaroBio), and/or an anorectic agent, such as dexamphetamine, phentermine, phenylpropanolamine or mazindol.

Examples of suitable anti-inflammatory agents for use in combination with the compounds of the present invention include prednisone, dexamethasone, Enbrel®, cyclooxygenase inhibitors (i.e., COX-1 and/or COX-2 inhibitors such as NSAIDs, aspirin, indomethacin, ibuprofen, piroxicam, Naproxen®, Celebrex®, Vioxx®), CTLA4-Ig agonists/antagonists, CD40 ligand antagonists, IMPDH inhibitors, such as mycophenolate (CellCept®) integrin antagonists, alpha-4 beta-7 integrin antagonists, cell adhesion inhibitors, interferon gamma antagonists, ICAM-1, tumor necrosis factor (TNF) antagonists (e.g., infliximab, OR1384), prostaglandin synthesis inhibitors, budesonide, clofazimine, CNI-1493, CD4 antagonists (e.g., priliximab), p38 mitogen-activated protein kinase inhibitors, protein tyrosine kinase (PTK) inhibitors, IKK inhibitors, and therapies for the treatment of irritable bowel syndrome (e.g., Zelmec® and Maxi-K® openers such as those disclosed in U.S. Patent No. 6,184,231 B1).

Example of suitable anti-anxiety agents for use in combination with the compounds of the present invention include diazepam, lorazepam, buspirone, oxazepam, and hydroxyzine pamoate.

5 Examples of suitable anti-depressants for use in combination with the compounds of the present invention include citalopram, fluoxetine, nefazodone, sertraline, and paroxetine.

10 Examples of suitable anti-hypertensive agents for use in combination with the compounds of the present invention include beta adrenergic blockers, calcium channel blockers (L-type and T-type; e.g. diltiazem, verapamil, nifedipine, amlodipine and mybefradil), diuretics (e.g., chlorothiazide, hydrochlorothiazide, flumethiazide, hydroflumethiazide, bendroflumethiazide, methylchlorothiazide, trichloromethiazide, polythiazide, benzthiazide, ethacrynic acid, tricyclic, chlorthalidone, furosemide, musolimine, bumetanide, triamterene, amiloride, spironolactone), renin inhibitors, ACE inhibitors (e.g., captopril, zofenopril, fosinopril, enalapril, ceranopril, cilazapril, 15 delapril, pentopril, quinapril, ramipril, lisinopril), AT-1 receptor antagonists (e.g., losartan, irbesartan, valsartan), ET receptor antagonists (e.g., sitaxsentan, atrisentan and compounds disclosed in U.S. Patent Nos. 5,612,359 and 6,043,265), Dual ET/AII antagonist (e.g., compounds disclosed in WO 00/01389), neutral endopeptidase (NEP) inhibitors, vasopeptidase inhibitors (dual NEP-ACE inhibitors) (e.g., omapatrilat and 20 gemopatrilat), and nitrates.

25 Examples of suitable anti-platelet agents for use in combination with the compounds of the present invention include GPIIb/IIIa blockers (e.g., abciximab, eptifibatide, tirofiban), P2Y₁₂ antagonists (e.g., clopidogrel, ticlopidine, CS-747), thromboxane receptor antagonists (e.g., ifetroban), aspirin, and PDE-III inhibitors (e.g., dipyridamole) with or without aspirin.

Examples of suitable cardiac glycosides for use in combination with the compounds of the present invention include digitalis and ouabain.

Examples of suitable cholesterol/lipid lowering agents for use in combination with the compounds of the present invention include HMG-CoA reductase inhibitors (e.g., pravastatin, lovastatin, atorvastatin, simvastatin, NK-104 (a.k.a. itavastatin, or nisvastatin or nisbastatin) and ZD-4522 (a.k.a. rosuvastatin, or atavastatin or 5 visastatin)), squalene synthetase inhibitors, fibrates, bile acid sequestrants, ACAT inhibitors, MTP inhibitors, lipooxygenase inhibitors, cholesterol absorption inhibitors, and cholesterol ester transfer protein inhibitors (e.g., CP-529414).

Examples of suitable mineralocorticoid receptor antagonists for use in combination with the compounds of the present invention include spironolactone and 10 eplerinone.

Examples of suitable phosphodiesterase inhibitors for use in combination with the compounds of the present invention include PDEIII inhibitors such as cilostazol, and PDE V inhibitors such as sildenafil.

Examples of suitable thyroid mimetics for use in combination with the 15 compounds of the present invention include thyrotropin, polythyroid, KB-130015, and dronedarone.

Examples of suitable anabolic agents for use in combination with the compounds of the present invention include testosterone, TRH diethylstilbesterol, 20 estrogens, β -agonists, theophylline, anabolic steroids, dehydroepiandrosterone, enkephalins, E-series prostagladins, retinoic acid and compounds as disclosed in U.S. Pat. No. 3,239,345, e.g., Zeranol®; U.S. Patent No. 4,036,979, e.g., Sulbenox® or peptides as disclosed in U.S. Pat. No. 4,411,890.

Examples of suitable HIV or AIDS therapies for use in combination with the compounds of the present invention include indinavir sulfate, saquinavir, 25 mesylate, ritonavir, lamivudine, zidovudine, lamivudine/zidovudine combinations, zalcitabine, didanosine, stavudine, and megestrol acetate.

Examples of suitable therapies for treatment of Alzheimer's disease and cognitive disorders for use in combination with the compounds of the present

invention include donepezil, tacrine, revastigmine, 5HT₆, gamma secretase inhibitors, beta secretase inhibitors, SK channel blockers, Maxi-K blockers, and KCNQs blockers.

5 Examples of suitable therapies for treatment of sleeping disorders for use in combination with the compounds of the present invention include melatonin analogs, melatonin receptor antagonists, ML1B agonists, and GABA/NMDA receptor antagonists.

10 Examples of suitable anti-proliferative agents for use in combination with the compounds of the present invention include cyclosporin A, paclitaxel, FK 506, and adriamycin.

Examples of suitable anti-tumor agents for use in combination with the compounds of the present invention include paclitaxel, adriamycin, epothilones, cisplatin and carboplatin.

15 Compounds of the present invention can further be used in combination with nutritional supplements such as those described in U.S. 5,179,080, especially in combination with whey protein or casin, amino acids (such as leucine, branched amino acids and hydroxymethylbutyrate), triglycerides, vitamins (e.g., A, B₆, B₁₂, folate, C, D and E), minerals (e.g., selenium, magnesium, zinc, chromium, calcium and potassium), carnitine, lipoic acid, creatine, and coenzyme Q-10.

20 In addition, compounds of the present invention can be used in combination with therapeutic agents used in the treatment of sexual dysfunction, including but not limited to PDE5 inhibitors, such as sildenafil or IC-351; with an antiresorptive agent, hormone replacement therapies, vitamin D analogues, calcitonins, elemental calcium and calcium supplements, cathepsin K inhibitors, MMP inhibitors, vitronectin
25 receptor antagonists, Src SH₂ antagonists, vacular -H⁺-ATPase inhibitors, progesterone receptor agonists, ipriflavone, fluoride, RANK antagonists, PTH and its analogues and fragments, Tibolone, HMG-CoA reductase inhibitors, SERM's, p38 inhibitors, prostanoids, 17-beta hydroxysteroid dehydrogenase inhibitors and Src kinase inhibitors.

Compounds of the present invention can be used in combination with male contraceptives, such as nonoxynol 9 or therapeutic agents for the treatment of hair loss, such as minoxidil and finasteride or chemotherapeutic agents, such as with LHRH agonists.

- 5 For their preferred anticancer or antiangiogenic use, the compounds of the present invention can be administered either alone or in combination with other anti-cancer and cytotoxic agents and treatments useful in the treatment of cancer or other proliferative diseases, for example, where the second drug has the same or different mechanism of action than the present compounds of formula I. Examples of classes
- 10 of anti-cancer and cytotoxic agents useful in combination with the present compounds include but are not limited to: alkylating agents such as nitrogen mustards, alkyl sulfonates, nitrosoureas, ethylenimines, and triazenes; antimetabolites such as folate antagonists, purine analogues, and pyrimidine analogues; antibiotics such as anthracyclines, bleomycins, mitomycin, dactinomycin, and plicamycin; enzymes such
- 15 as L-asparaginase; farnesyl-protein transferase inhibitors; 5 α reductase inhibitors; inhibitors of 17 β -hydroxy steroid dehydrogenase type 3; hormonal agents such as glucocorticoids, estrogens/ antiestrogens, androgens/ antiandrogens, progestins, and luteinizing hormone-releasing hormone antagonists, octreotide acetate; microtubule-disruptor agents, such as ecteinascidins or their analogs and derivatives; microtubule-
- 20 stabilizing agents such as taxanes, for example, paclitaxel (Taxol®), docetaxel (Taxotere®), and their analogs, and epothilones, such as epothilones A-F and their analogs; plant-derived products, such as vinca alkaloids, epipodophyllotoxins, taxanes; and topoisomerase inhibitors; prenyl-protein transferase inhibitors; and miscellaneous agents such as hydroxyurea, procarbazine, mitotane,
- 25 hexamethylmelamine, platinum coordination complexes such as cisplatin and carboplatin; and other agents used as anti-cancer and cytotoxic agents such as biological response modifiers, growth factors; immune modulators and monoclonal antibodies. The compounds of the invention may also be used in conjunction with radiation therapy.
- 30 Representative examples of these classes of anti-cancer and cytotoxic agents include but are not limited to mechlorethamine hydrochloride, cyclophosphamide,

- chlorambucil, melphalan, ifosfamide, busulfan, carmustin, lomustine, semustine, streptozocin, thiotepa, dacarbazine, methotrexate, thioguanine, mercaptopurine, fludarabine, pentastatin, cladribin, cytarabine, fluorouracil, doxorubicin hydrochloride, daunorubicin, idarubicin, bleomycin sulfate, mitomycin C,
- 5 actinomycin D, safracins, saframycins, quinocarcins, discodermolides, vincristine, vinblastine, vinorelbine tartrate, etoposide, etoposide phosphate, teniposide, paclitaxel, tamoxifen, estramustine, estramustine phosphate sodium, flutamide, buserelin, leuprolide, pteridines, diynes, levamisole, aflacon, interferon, interleukins, aldesleukin, filgrastim, sargramostim, rituximab, BCG, tretinoin,
- 10 irinotecan hydrochloride, betamethosone, gemcitabine hydrochloride, altretamine, and topotecan and any analogs or derivatives thereof.

- Preferred member of these classes include, but are not limited to, paclitaxel, cisplatin, carboplatin, doxorubicin, carminomycin, daunorubicin, aminopterin, methotrexate, methopterin, mitomycin C, ecteinascidin 743, or porfiromycin, 5-
- 15 fluorouracil, 6-mercaptopurine, gemcitabine, cytosine arabinoside, podophyllotoxin or podophyllotoxin derivatives such as etoposide, etoposide phosphate or teniposide, melphalan, vinblastine, vincristine, leurosine, vindesine and leurosine.

- Examples of anticancer and other cytotoxic agents include the following: epoethilone derivatives as found in German Patent No. 4138042.8, WO 97/19086, WO
- 20 98/22461, WO 98/25929, WO 98/38192, WO 99/01124, WO 99/02224, WO 99/02514, WO 99/03848, WO 99/07692, WO 99/27890, WO 99/28324, WO 99/43653, WO 99/54330, WO 99/54318, WO 99/54319, WO 99/65913, WO 99/67252, WO 99/67253 and WO 00/00485; cyclin dependent kinase inhibitors as found in WO 99/24416 (see also U.S. Patent No. 6,040,321); and prenyl-protein
- 25 transferase inhibitors as found in WO 97/30992 and WO 98/54966; and agents such as those described generically and specifically in U.S. Patent No. 6,011,029 (the compounds of which U.S. Patent can be employed together with any NHR modulators (including, but not limited to, those of present invention) such as AR modulators, ER modulators, with LHRH modulators, or with surgical castration, especially in the
- 30 treatment of cancer).

The combinations of the present invention can also be formulated or co-administered with other therapeutic agents that are selected for their particular usefulness in administering therapies associated with the aforementioned conditions. For example, the compounds of the invention may be formulated with agents to
5 prevent nausea, hypersensitivity and gastric irritation, such as antiemetics, and H₁ and H₂ antihistaminics.

As it pertains to the treatment of cancer, the compounds of this invention are most preferably used alone or in combination with anti-cancer treatments such as radiation therapy and/or with cytostatic and/or cytotoxic agents, such as, but not
10 limited to, DNA interactive agents, such as cisplatin or doxorubicin; inhibitors of farnesyl protein transferase, such as those described in U.S. Patent No. 6,011,029; topoisomerase II inhibitors, such as etoposide; topoisomerase I inhibitors, such as CPT-11 or topotecan; tubulin stabilizing agents, such as paclitaxel, docetaxel, other taxanes, or epothilones; hormonal agents, such as tamoxifen; thymidilate synthase
15 inhibitors, such as 5-fluorouracil; antimetabolites, such as methotrexate; antiangiogenic agents, such as angiostatin, ZD6474, ZD6126 and comberstatin A2; kinase inhibitors, such as her2 specific antibodies, Iressa and CDK inhibitors; histone deacetylase inhibitors, such as CI-994 and MS-27-275. Such compounds may also be combined with agents which suppress the production of circulating testosterone such
20 as LHRH agonists or antagonists or with surgical castration.

For example, known therapies for advanced metastatic prostate cancer include "complete androgen ablation therapy" wherein tumor growth is inhibited by controlling the supply of androgen to the prostate tissues via chemical castration (castration serves to inhibit the production of circulating testosterone (T) and
25 dihydrotestosterone (DHT)) followed by the administration of androgen receptor (AR) antagonists (which inhibit the function T/DHT derived from the conversion of circulating androgen precursors to T/DHT by the prostate tissue). The compounds of the present invention can be employed as AR antagonists in complete ablation therapy, alone or in combination with other AR antagonists such as Flutamide,
30 Casodex, Nilutamide, or Cyproterone acetate.

Another application of the present compounds is in combination with antibody therapy such as but not limited to antibody therapy against PSCA. An additional application is in concert with vaccine / immune modulating agents for the treatment of cancer.

- 5 Compounds of the present invention can be employed in accordance with the methods described in U.S. Provisional Patent Application Serial No. 60/284,438, entitled "Selective Androgen Receptor Modulators and Methods for Their Identification, Design and Use" filed April 18, 2001 by Mark E. Salvati *et al.* (Attorney Docket No. LD0250(PSP)), which Provisional Patent Application is
- 10 incorporated herein by reference in its entirety (including, but not limited to, reference to all specific compounds within formula I of the present invention), and U.S. Patent Application Serial No. _____ (unassigned), entitled "Selective Androgen Receptor Modulators and Methods for their Identification, Design and Use" filed June 20, 2001 by Mark E. Salvati *et al.* (Attorney Docket No. LD0250(NP)), which Patent
- 15 Application is incorporated herein by reference in its entirety (including, but not limited to, reference to all specific compounds within formula I of the present invention).

- The above other therapeutic agents, when employed in combination with the
- 20 compounds of the present invention, can be used, for example, in those amounts indicated in the Physicians' Desk Reference (PDR) or as otherwise determined by one of ordinary skill in the art.

- The following assays can be employed in ascertaining the activity of a compound as a NHR modulator. Various compounds of the present invention were
- 25 determined to have AR modulator activity utilizing the transactivation assay, and standard AR binding assays as described following. At the concentration tested, certain compounds within formula I showed poor or no *in vivo* activity in the assay employed (e.g., compounds of Example 97).

Transactivation Assays:

AR Specific Assay:

Compounds of the present invention were tested in transactivation assays of
5 a transfected reporter construct and using the endogenous androgen receptor of the
host cells. The transactivation assay provides a method for identifying functional
agonists and partial agonists that mimic, or antagonists that inhibit, the effect of native
hormones, in this case, dihydrotestosterone (DHT). This assay can be used to predict
10 *in vivo* activity as there is a good correlation in both series of data. See, e.g. T. Berger
et al., *J. Steroid Biochem. Molec. Biol.* 773 (1992), the disclosure of which is herein
incorporated by reference.

For the transactivation assay a reporter plasmid is introduced by
transfection (a procedure to induce cells to take foreign genes) into the respective
cells. This reporter plasmid, comprising the cDNA for a reporter protein, such as
15 secreted alkaline phosphatase (SEAP), controlled by prostate specific antigen (PSA)
upstream sequences containing androgen response elements (AREs). This reporter
plasmid functions as a reporter for the transcription-modulating activity of the AR.
Thus, the reporter acts as a surrogate for the products (mRNA then protein) normally
expressed by a gene under control of the AR and its native hormone. In order to
20 detect antagonists, the transactivation assay is carried out in the presence of constant
concentration of the natural AR hormone (DHT) known to induce a defined reporter
signal. Increasing concentrations of a suspected antagonist will decrease the reporter
signal (e.g., SEAP production). On the other hand, exposing the transfected cells to
increasing concentrations of a suspected agonist will increase the production of the
25 reporter signal.

For this assay, LNCaP and MDA 453 cells were obtained from the
American Type Culture Collection (Rockville, MD), and maintained in RPMI 1640 or
DMEM medium supplemented with 10% fetal bovine serum (FBS; Gibco)
respectively. The respective cells were transiently transfected by electroporation
30 according to the optimized procedure described by Heiser, 130 *Methods Mol. Biol.*,
117 (2000), with the pSEAP2/PSA540/Enhancer reporter plasmid. The reporter

plasmid, was constructed as follows: commercial human placental genomic DNA was used to generate by Polymerase Cycle Reaction (PCR) a fragment containing the BglII site (position 5284) and the Hind III site at position 5831 of the human prostate specific antigen promoter (Accession # U37672); Schuur, et al., *J. Biol. Chem.*, 271 (12): 7043-51 (1996). This fragment was subcloned into the pSEAP2/basic (Clontech) previously digested with BglII and HindIII to generate the pSEAP2/PSA540 construct. Then a fragment bearing the fragment of human PSA upstream sequence between positions -5322 and -3873 was amplified by PCR from human placental genomic DNA. A XhoI and a BglII sites were introduced with the primers. The resulting fragment was subcloned into pSEAP2/PSA540 digested with XhoI and BglII respectively, to generate the pSEAP2/PSA540/Enhancer construct. LNCaP and MDA 453 cells were collected in media containing 10% charcoal stripped FBS. Each cell suspension was distributed into two Gene Pulser Cuvetts (Bio-Rad) which then received 8 µg of the reporter construct, and electoporated using a Bio-Rad Gene Pulser at 210 volts and 960 µFaraday. Following the transfections the cells were washed and incubated with media containing charcoal stripped fetal bovine serum in the absence (blank) or presence (control) of 1 nM dihydrotestosterone (DHT; Sigma Chemical) and in the presence or absence of the standard anti-androgen bicalutamide or compounds of the present invention in concentrations ranging from 10⁻¹⁰ to 10⁻⁵ M (sample). Duplicates were used for each sample. The compound dilutions were performed on a Biomek 2000 laboratory workstation. After 48 hours, a fraction of the supernatant was assayed for SEAP activity using the Phospha-Light Chemiluminescent Reporter Gene Assay System (Tropix, Inc). Viability of the remaining cells was determined using the CellTiter 96 Aqueous Non-Radioactive Cell Proliferation Assay (MTS Assay, Promega). Briefly, a mix of a tetrazolium compound (3-(4,5-dimethylthiazol-2-yl)-5-(3-carboxymethoxyphenyl)- 2-(4-sulfophenyl)-2H-tetrazolium, inner salt; MTS) and an electron coupling reagent (phenazine methosulfate; PMS) are added to the cells. MTS (Owen's reagent) is bio-reduced by cells into a formazan that is soluble in tissue culture medium, and therefore its absorbance at 490nm can be measured directly from 96 well assay plates

- without additional processing. The quantity of formazan product as measured by the amount of 490nm absorbance is directly proportional to the number of living cells in culture. For each replicate the SEAP reading was normalized by the Abs490 value derived from the MTS assay. For the antagonist mode, the % Inhibition was
- 5 calculated as:

$$\% \text{ Inhibition} = 100 \times (1 - [\text{average control} - \text{average blank} / \text{average sample} - \text{average blank}])$$

- 10 Data was plotted and the concentration of compound that inhibited 50% of the normalized SEAP was quantified (IC_{50}).

- For the agonist mode % Control was referred as the effect of the tested compound compared to the maximal effect observed with the natural hormone, in this case DHT,
- 15 and was calculated as:

$$\% \text{ Control} = 100 \times \text{average sample} - \text{average blank} / \text{average control} - \text{average blank}$$

- Data was plotted and the concentration of compound that activates to levels 50% of the normalized SEAP for the control was quantified (EC_{50}).
- 20

GR Specificity Assay:

- The reporter plasmid utilized was comprised of the cDNA for the reporter SEAP protein, as described for the AR specific transactivation assay. Expression of
- 25 the reporter SEAP protein was controlled by the mouse mammary tumor virus long terminal repeat (MMTV LTR) sequences that contains three hormone response elements (HREs) that can be regulated by both GR and PR see, e.g. G. Chalepakis et al., Cell, 53(3), 371 (1988). This plasmid was transfected into A549 cells, which
- expresses endogenous GR, to obtain a GR specific transactivation assay. A549 cells
- 30 were obtained from the American Type Culture Collection (Rockville, MD), and maintained in RPMI 1640 supplemented with 10% fetal bovine serum (FBS; Gibco).

Determination of the GR specific antagonist activity of the compounds of the present invention was identical to that described for the AR specific transactivation assay, except that the DHT was replaced with 5 nM dexamethasone (Sigma Chemicals), a specific agonist for GR. Determination of the GR specific agonist activity of the
5 compounds of the present invention was performed as described for the AR transactivation assay, wherein one measures the activation of the GR specific reporter system by the addition of a test compound, in the absence of a known GR specific agonists ligand.

10 **PR Specific Assay:**

The reporter plasmid utilized was comprised of the cDNA for the reporter SEAP protein, as described for the AR specific transactivation assay. Expression of the reporter SEAP protein was controlled by the mouse mammary tumor virus long terminal repeat (MMTV LTR) sequences that contains three
15 hormone response elements (HREs) that can be regulated by both GR and PR. This plasmid was transfected into T47D, which expresses endogenous PR, to obtain a PR specific transactivation assay. T47D cells were obtained from the American Type Culture Collection (Rockville, MD), and maintained in DMEM medium supplemented with 10% fetal bovine serum (FBS; Gibco). Determination of the PR
20 specific antagonist activity of the compounds of the present invention was identical to that described for the AR specific transactivation assay, except that the DHT was replaced with 1 nM Promegastone (NEN), a specific agonist for PR. Determination of the PR specific agonist activity of the compounds of the present invention was performed as described for the AR transactivation assay, wherein one measures the
25 activation of the PR specific reporter system by the addition of a test compound, in the absence of a known PR specific agonists ligand.

AR Binding Assay:

For the whole cell binding assay, human LNCaP cells (T877A mutant AR) or
30 MDA 453 (wild type AR) in 96-well microtiter plates containing RPMI 1640 or DMEM supplemented with 10% charcoal stripped CA-FBS (Cocaleco Biologicals)

respectively, were incubated at 37°C to remove any endogenous ligand that might be complexed with the receptor in the cells. After 48 hours, either a saturation analysis to determine the K_d for tritiated dihydrotestosterone, [^3H]-DHT, or a competitive binding assay to evaluate the ability of test compounds to compete with [^3H]-DHT were performed. For the saturation analysis, media (RPMI 1640 or DMEM – 0.2% CA-FBS) containing [^3H]-DHT (in concentrations ranging from 0.1 nM to 16 nM) in the absence (total binding) or presence (non-specific binding) of a 500-fold molar excess of unlabeled DHT were added to the cells. After 4 hours at 37°C, an aliquot of the total binding media at each concentration of [^3H]-DHT was removed to estimate the amount of free [^3H]-DHT. The remaining media was removed, cells were washed three times with PBS and harvested onto UniFilter GF/B plates (Packard), Microscint (Packard) was added and plates counted in a Top-Counter (Packard) to evaluate the amount of bound [^3H]-DHT.

For the saturation analysis, the difference between the total binding and the non-specific binding, was defined as specific binding. The specific binding was evaluated by Scatchard analysis to determine the K_d for [^3H]-DHT. See e.g. D. Rodbard, Mathematics and statistics of ligand assays: an illustrated guide. In: J. Langon and J. J. Clapp, eds., Ligand Assay, Masson Publishing U.S.A., Inc., New York, pp 45-99, (1981), the disclosure of which is herein incorporated by reference.

For the competition studies, media containing 1 nM [^3H]-DHT and test compounds of the invention ("test compounds") in concentrations ranging from 10^{-10} to 10^{-5} M were added to the cells. Two replicates were used for each sample. After 4 hours at 37°C, cells were washed, harvested and counted as described above. The data was plotted as the amount of [^3H]-DHT (% of control in the absence of test compound) remaining over the range of the dose response curve for a given compound. The concentration of test compound that inhibited 50% of the amount of [^3H]-DHT bound in the absence of competing ligand was quantified (IC_{50}) after log-logit transformation. The K_i values were determined by application of the Cheng-Prusoff equation to the IC_{50} values, where:

$$K_i = \frac{\text{IC}_{50}}{(1 + ([^3\text{H-DHT}] / K_d \text{ for } ^3\text{H-DHT}))}$$

After correcting for non-specific binding, IC_{50} values were determined. The IC_{50} is defined as the concentration of competing ligand needed to reduce specific binding by 50%. The K_d s for [3H]-DHT for MDA 453 and LNCaP were 0.7 and 0.2 nM respectively.

5

Human Prostate Cell Proliferation Assay:

Compounds of the present invention were tested ("test compounds") on the proliferation of human prostate cancer cell lines. For that, MDA PCa2b cells, a cell line derived from the metastasis of a patient that failed castration, Navone et al., *Clin. Cancer Res.*, 3, 2493-500 (1997), were incubated with or without the test compounds for 72 hours and the amount of [3H]-thymidine incorporated into DNA was quantified as a way to assess number of cells and therefore proliferation. The MDA PCa2b cell line was maintained in BRFF-HPC1 media (Biological Research Faculty & Facility Inc., MD) supplemented with 10% FBS. For the assay, cells were plated in Biocoated 96-well microplates and incubated at 37°C in 10% FBS (charcoal-stripped)/BRFF-BMZERO (without androgens). After 24 hours, the cells were treated in the absence (blank) or presence of 1 nM DHT (control) or with test compounds (sample) of the present invention in concentrations ranging from 10^{-10} to 10^{-5} M. Duplicates were used for each sample. The compound dilutions were performed on a Biomek 2000 laboratory work station. Seventy two hours later 0.44 uCi. of [3H]-Thymidine (Amersham) was added per well and incubated for another 24 h followed by trypsinization, harvesting of the cells onto GF/B filters. Micro-scint PS were added to the filters before counting them on a Beckman TopCount.

The % Inhibition was calculated as:

$$\% \text{ Inhibition} = 100 \times (1 - [\text{average}_{\text{control}} - \text{average}_{\text{blank}} / \text{average}_{\text{sample}} - \text{average}_{\text{blank}}])$$

Data was plotted and the concentration of compound that inhibited 50% of the [3H]-Thymidine incorporation was quantified (IC_{50}).

C2C12 Mouse Myoblast Transactivation Assay:

Two functional transactivation assays were developed to assess the efficacy of androgen agonists in a muscle cell background using a luciferase reporter. The first

assay (ARTA Stable 1) uses a cell line, Stable 1 (clone #72), which stably expresses the full length rat androgen receptor but requires the transient transfection of an enhancer/reporter. This cell line was derived from C2C12 mouse myoblast cells.

The second assay (ARTA Stable 2) uses a cell line, Stable 2 (clone #133), derived from Stable 1 which stably expresses both rAR and the enhancer/luciferase reporter.

The enhancer/reporter construct used in this system is pGL3/2XDR-1/luciferase. 2XDR-1 was reported to be an AR specific response element in CV-1 cells, Brown et. al. *The Journal of Biological Chemistry* 272, 8227-8235, (1997). It was developed by random mutagenesis of an AR/GR consensus enhancer sequence.

ARTA Stable 1:

1. Stable 1 cells are plated in 96 well format at 6,000 cells/well in high glucose DMEM without phenol red (Gibco BRL, Cat. No.: 21063-029) containing 10% charcoal and dextran treated FBS (HyClone Cat. No.: SH30068.02), 50 mM HEPES Buffer (Gibco BRL, Cat. No.: 15630-080), 1X MEM Na Pyruvate (Gibco BRL, Cat. No.: 11360-070), 0.5X Antibiotic-Antimycotic, and 800 µg/ml Geneticin (Gibco BRL, Cat. No.: 10131-035).
2. 48 hours later, cells are transfected with pGL3/2XDR-1/luciferase using LipofectAMINE Plus™ Reagent (Gibco BRL, Cat. No.: 10964-013). Specifically, 5 ng/well pGL3/2XDR-1/luciferase DNA and 50 ng/well Salmon Sperm DNA (as carrier) are diluted with 5 µl/well Opti-MEM media (Gibco BRL, Cat. No.: 31985-070). To this, 0.5 µl/well Plus reagent is added. This mixture is incubated for 15 minutes at room temperature. In a separate vessel, 0.385 µl/well LipofectAMINE reagent is diluted with 5 µl/well Opti-MEM. The DNA mixture is then combined with the LipofectAMINE mixture and incubated for an additional 15 minutes at room temperature. During this time, the media from the cells is removed and replaced with 60 µl/well of Opti-MEM. To this is added 10 µl/well of the DNA/LipofectAMINE transfection mixture. The cells are incubated for 4 hours.
3. The transfection mixture is removed from the cells and replaced with 90 µl of media as in #1 above.

4. 10 μ l/well of appropriate drug dilution is placed in each well.
5. 24 hours later, the Steady-GloTM Luciferase Assay System is used to detect activity according to the manufacturer's instructions (Promega, Cat. No.: E2520).

5 **ARTA stable 2**

1. Stable 2 cells are plated in 96 well format at 6,000 cells/well in high glucose DMEM without phenol red (Gibco BRL, Cat. No.: 21063-029) containing 10% charcoal and dextran treated FBS (HyClone Cat. No.: SH30068.02), 50 mM HEPES Buffer (Gibco BRL, Cat. No.: 15630-080), 1X MEM Na Pyruvate (Gibco BRL, Cat. No.: 11360-070), 0.5X Antibiotic-Antimycotic, 800 μ g/ml Geneticin (Gibco BRL, Cat. No.: 10131-035) and 800 μ g/ml Hygromycin β (Gibco BRL, Cat. No.: 10687-010).
2. 48 hours later, the media on the cells is removed and replaced with 90 μ l fresh. 10 μ l/well of appropriate drug dilution is placed in each well.
3. 24 hours later, the Steady-GloTM Luciferase Assay System is used to detect activity according to the manufacturer's instructions (Promega, Cat. No.: E2520).

See U.S. Patent Application Serial No. _____ (unassigned), entitled "Cell Lines and Cell-Based Assays for Identification of Androgen Receptor Modulators" filed June 20, 2001 by Jacek Ostrowski *et al.* (Attorney Docket No. D0177), which Patent Application is incorporated herein by reference in its entirety.

Proliferation Assays

Murine Breast Cell Proliferation Assay:

- 25 The ability of compounds of the present invention ("test compounds") to modulate the function of the AR was determined by testing said compounds in a proliferation assay using the androgen responsive murine breast cell line derived from the Shionogi tumor, Hiraoka *et al.*, *Cancer Res.*, 47, 6560-6564 (1987). Stable AR dependent clones of the parental Shionogi line were established by passing tumor
- 30 fragments under the general procedures originally described in Tetuo, *et al.*, *Cancer Research* 25, 1168-1175 (1965). From the above procedure, one stable line, SC114,

was isolated, characterized and utilized for the testing of example compounds. SC114 cells were incubated with or without the test compounds for 72 hours and the amount of [3H]-thymidine incorporated into DNA was quantified as a surrogate endpoint to assess the number of cells and therefore the proliferation rate as described in Suzuki *et. al.*, *J. Steroid Biochem. Mol. Biol.* 37, 559-567 (1990). The SC114 cell line was maintained in MEM containing 10^{-8} M testosterone and 2% DCC-treated FCS. For the assay, cells were plated in 96-well microplates in the maintenance media and incubated at 37°C. On the following day, the medium was changed to serum free medium [Ham's F-12:MEM (1;1, v/v) containing 0.1% BSA] with (antagonist mode) or without (agonist mode) 10^{-8} M testosterone and the test compounds of the present invention in concentrations ranging from 10^{-10} to 10^{-5} M. Duplicates were used for each sample. The compound dilutions were performed on a Biomek 2000 laboratory work station. Seventy two hours later 0.44uCi of [3H]-Thymidine (Amersham) was added per well and incubated for another 2 hr followed by trypsinization, and harvesting of the cells onto GF/B filters. Micro-scint PS were added to the filters before counting them on a Beckman TopCount.

For the antagonist mode, the % Inhibition was calculated as:

$$\% \text{ Inhibition} = 100 \times (1 - [\text{average}_{\text{sample}} - \text{average}_{\text{blank}} / \text{average}_{\text{control}} - \text{average}_{\text{blank}}])$$

Data was plotted and the concentration of compound that inhibited 50% of the [3H]-Thymidine incorporation was quantified (IC_{50}).

For the agonist mode % Control was referred as the effect of the tested compound compared to the maximal effect observed with the natural hormone, in this case DHT, and was calculated as:

$$\% \text{ Control} = 100 \times (\text{average}_{\text{sample}} - \text{average}_{\text{blank}}) / (\text{average}_{\text{control}} - \text{average}_{\text{blank}})$$

Data was plotted and the concentration of compound that inhibited 50% of the [3H]-Thymidine incorporation was quantified (EC_{50}).

In Vitro Assay to Measure GR Induced AP-1 Transrepression:

The AP-1 assay is a cell based luciferase reporter assay. A549 cells, which contain endogenous glucocorticoid receptor, were stably transfected with an AP-1 DNA binding site attached to the luciferase gene. Cells are then grown in RPMI + 10% fetal calf serum (charcoal-treated) + Penicillin/Streptomycin with 0.5mg/ml geneticin. Cells are plated the day before the assay at approximately 40000 cells/well. On assay day, the media is removed by aspiration and 20 μ l assay buffer (RPMI without phenol red + 10% FCS (charcoal-treated) + Pen/Strep) is added to each well. At this point either 20 μ l assay buffer (control experiments), the compounds of the present invention ("test compounds") (dissolved in DMSO and added at varying concentrations) or dexamethasone (100 nM in DMSO, positive control) are added to each well. The plates are then pre-incubated for 15 minutes at 37°C, followed by stimulation of the cells with 10 ng/ml PMA. The plates are then incubated for 7 hrs at 37°C after which 40 μ l luciferase substrate reagent is added to each well. Activity is measured by analysis in a luminometer as compared to control experiments treated with buffer or dexamethasone. Activity is designated as % inhibition of the reporter system as compared to the buffer control with 10 ng/ml PMA alone. The control, dexamethasone, at a concentration of ≤ 10 μ M typically suppresses activity by 65%. Test compounds which demonstrate an inhibition of PMA induction of 50% or greater at a concentration of test compound of ≤ 10 μ M are deemed active.

Wet Prostate Weight Assay AR Antagonist Assay:

The activity of compounds of the present invention as AR antagonists was investigated in an immature male rat model, a standard, recognized test of antiandrogen activity of a given compound, as described in L. G. Hershberger et al., *Proc. Soc. Expt. Biol. Med.*, 83, 175 (1953); P. C. Walsh and R. F. Gittes, "Inhibition of extratesticular stimuli to prostate growth in the castrated rat by antiandrogens", *Endocrinology*, 86, 624 (1970); and B. J. Furr et al., "ICI 176,334: A novel non-

steroid, peripherally selective antiandrogen", *J. Endocrinol.*, 113, R7-9 (1987), the disclosures of which are herein incorporated by reference.

The basis of this assay is the fact that male sexual accessory organs, such as the prostate and seminal vesicles, play an important role in reproductive function.

- 5 These glands are stimulated to grow and are maintained in size and secretory function by the continued presence of serum testosterone (T), which is the major serum androgen (>95%) produced by the Leydig cells in the testis under the control of the pituitary luteinizing hormone (LH) and follicle stimulating hormone (FSH).

- Testosterone is converted to the more active form, dihydrotestosterone, (DHT), within
10 the prostate by 5α -reductase. Adrenal androgens also contribute about 20% of total DHT in the rat prostate, compared to 40% of that in 65-year-old men. F. Labrie et al. *Clin. Invest. Med.*, 16, 475-492 (1993). However, this is not a major pathway, since in both animals and humans, castration leads to almost complete involution of the prostate and seminal vesicles without concomitant adrenalectomy. Therefore, under
15 normal conditions, the adrenals do not support significant growth of prostate tissues. M. C. Luke and D. S. Coffey, *"The Physiology of Reproduction"* ed. By E. Knobil and J. D. Neill, 1, 1435-1487 (1994). Since the male sex organs are the tissues most responsive to modulation of the androgen activity, this model is used to determine the androgen dependent growth of the sex accessory organs in immature castrated rats.

- 20 Male immature rats (19-20 days old Sprague-Dawley, Harlan Sprague-Dawley) were castrated under metofane anesthesia. Five days after surgery these castrated rats (60-70g, 23-25 day-old) were dosed for 3 days. Animals were dosed sub-cutaneously (s.c.) 1mg/kg with Testosterone Propionate (TP) in arachis oil vehicle and anti-androgen test compounds (compounds of the present invention) were
25 dosed orally by gavage (p.o.) in dissolved/suspensions of 80% PEG 400 and 20% Tween 80 (PEGTW). Animals were dosed (v/w) at 0.5 ml of vehicle /100g body weight. Experimental groups were as follows:

1. Control vehicle
2. Testosterone Propionate (TP) (3 mg/rat/day, subcutaneous)
- 30 3. TP plus Casodex (administered p.o. in PEGTW, QD), a recognized antiandrogen, as a reference compound.

4. To demonstrate antagonist activity, a compound of the present invention ("test compound") was administered (p.o. in PEGTW, QD) with TP (s.c. as administered in group 2) in a range of doses.
5. To demonstrate agonist activity a compound of the present invention ("test compound") was administered alone (p.o. in PEGTW, QD) in a range of doses.

At the end of the 3-day treatment, the animals were sacrificed, and the ventral prostate weighed. To compare data from different experiments, the sexual organs weights were first standardized as mg per 100 g of body weight, and the increase in organ weight induced by TP was considered as the maximum increase (100%). ANOVA followed by one-tailed Student or Fischer's exact test was used for statistical analysis.

The gain and loss of sexual organ weight reflect the changes of the cell number (DNA content) and cell mass (protein content), depending upon the serum androgen concentration. See Y. Okuda et al., *J. Urol.*, 145, 188-191 (1991), the disclosure of which is herein incorporated by reference. Therefore, measurement of organ wet weight is sufficient to indicate the bioactivity of androgens and androgen antagonist. In immature castrated rats, replacement of exogenous androgens increases seminal vesicles (SV) and the ventral prostate (VP) in a dose dependent manner.

The maximum increase in organ weight was 4 to 5-fold when dosing 3 mg/rat/day of testosterone (T) or 1 mg/rat/day of testosterone propionate (TP) for 3 days. The EC_{50} of T and TP were about 1 mg and 0.03 mg, respectively. The increase in the weight of the VP and SV also correlated with the increase in the serum T and DHT concentration. Although administration of T showed 5-times higher serum concentrations of T and DHT at 2 hours after subcutaneous injection than that of TP, thereafter, these high levels declined very rapidly. In contrast, the serum concentrations of T and DHT in TP-treated animals were fairly consistent during the 24 hours, and therefore, TP showed about 10-30-fold higher potency than free T.

In this immature castrated rat model, a known AR antagonist (Casodex) was also administered simultaneously with 0.1 mg of TP (ED_{80}), inhibiting the testosterone-mediated increase in the weights of the VP and SV in a dose dependent

manner. The antagonist effects were similar when dosing orally or subcutaneously. Compounds of the invention also exhibited AR antagonist activity by suppressing the testosterone-mediated increase in the weights of VP and SV.

5 Levator Ani & Wet Prostate Weight Assay AR Agonist Assay:

The activity of compounds of the present invention as AR agonists was investigated in an immature male rat model, a recognized test of anabolic effects in muscle and sustaining effects in sex organs for a given compound, as described in L. G. Hershberger et al., *Proc. Soc. Expt. Biol. Med.*, 83, 175 (1953); B. L. Beyler et al,
10 "Methods for evaluating anabolic and catabolic agents in laboratory animals", *J. Amer. Med. Women's Ass.*, 23, 708 (1968); H. Fukuda et al., "Investigations of the levator ani muscle as an anabolic steroid assay", *Nago Dai. Yak. Ken. Nem.* 14, 84 (1966) the disclosures of which are herein incorporated by reference.

The basis of this assay lies in the well-defined action of androgenic agents on
15 the maintenance and growth of muscle tissues and sexual accessory organs in animals and man. Androgenic steroids, such as testosterone (T), have been well characterized for their ability to maintain muscle mass. Treatment of animals or humans after castrations with an exogenous source of T results in a reversal of muscular atrophy. The effects of T on muscular atrophy in the rat levator ani muscle have been well
20 characterized. M. Masuoka et al., "Constant cell population in normal, testosterone deprived and testosterone stimulated levator ani muscles" *Am. J. Anat.* 119, 263 (1966); Z. Gori et al., "Testosterone hypertrophy of levator ani muscle of castrated rats. I. Quantitative data" *Boll. -Soc. Ital. Biol. Sper.* 42, 1596 (1966); Z. Gori et al., "Testosterone hypertrophy of levator ani muscle of castrated rats. II. Electron-
25 microscopic observations" *Boll. -Soc. Ital. Biol. Sper.* 42, 1600 (1966); A. Boris et al., *Steroids* 15, 61 (1970). As described above, the effects of androgens on maintenance of male sexual accessory organs, such as the prostate and seminal vesicles, is well described. Castration results in rapid involution and atrophy of the prostate and seminal vesicles. This effect can be reversed by exogenous addition of
30 androgens. Since both the levator ani muscle and the male sex organs are the tissues most responsive to the effects of androgenic agents, this model is used to determine

the androgen dependent reversal of atrophy in the levator ani muscle and the sex accessory organs in immature castrated rats. Sexually mature rats (200-250 g, 6-8 weeks-old, Sprague-Dawley, Harlan) were acquired castrated from the vendor (Taconic). The rats were divided into groups and treated daily for 7 to 14 days with one of the following:

1. Control vehicle
2. Testosterone Propionate (TP) (3 mg/rat/day, subcutaneous)
3. TP plus Casodex (administered p.o. in PEGTW, QD), a recognized antiandrogen, as a reference compound.
4. To demonstrate antagonist activity, a compound of the present invention ("test compound") was administered (p.o. in PEGTW, QD) with TP (s.c. as administered in group 2) in a range of doses.
5. To demonstrate agonist activity a compound of the present invention ("test compound") was administered alone (p.o. in PEGTW, QD) in a range of doses.

At the end of the 7-14-day treatment, the animals were sacrificed by carbon dioxide, and the levator ani, seminal vesicle and ventral prostate weighed. To compare data from different experiments, the levator ani muscle and sexual organ weights were first standardized as mg per 100 g of body weight, and the increase in organ weight induced by TP was considered as the maximum increase (100%). Super-anova (one factor) was used for statistical analysis.

The gain and loss of sexual organ weight reflect the changes of the cell number (DNA content) and cell mass (protein content), depending upon the serum androgen concentration. See Y. Okuda et al., *J. Urol.*, 145, 188-191 (1991), the disclosure of which is herein incorporated by reference. Therefore, measurement of organ wet weight is sufficient to indicate the bioactivity of androgens and androgen antagonist. In immature castrated rats, replacement of exogenous androgens increases levator ani, seminal vesicles (SV) and prostate in a dose dependent manner.

The maximum increase in organ weight was 4 to 5-fold when dosing 3 mg/rat/day of testosterone (T) or 1 mg/rat/day of testosterone propionate (TP) for 3 days. The EC_{50} of T and TP were about 1 mg and 0.03 mg, respectively. The

increase in the weight of the VP and SV also correlated with the increase in the serum T and DHT concentration. Although administration of T showed 5-times higher serum concentrations of T and DHT at 2 hours after subcutaneous injection than that of TP, thereafter, these high levels declined very rapidly. In contrast, the serum concentrations of T and DHT in TP-treated animals were fairly consistent during the 24 hours, and therefore, TP showed about 10-30-fold higher potency than free T.

MDA PCa2b Human Prostate Xenograft Assay:

In Vivo Antitumor Testing: MDA-PCa-2b human prostate tumors were maintained in Balb/c nu/nu nude mice. Tumors were propagated as subcutaneous transplants in adult male nude mice (4-6 weeks old) using tumor fragments obtained from donor mice. Tumor passage occurred every 5-6 weeks.

For antitumor efficacy trial, the required number of animals needed to detect a meaningful response were pooled at the start of the experiment and each was given a subcutaneous implant of a tumor fragment (~50 mg) with a 13-gauge trocar. Tumors were allowed to grow to approx. 100-200 mg (tumors outside the range were excluded) and animals were evenly distributed to various treatment and control groups. Treatment of each animal was based on individual body weight. Treated animals were checked daily for treatment related toxicity/mortality. Each group of animals was weighed before the initiation of treatment (Wt1) and then again following the last treatment dose (Wt2). The difference in body weight (Wt2-Wt1) provides a measure of treatment-related toxicity.

Tumor response was determined by measurement of tumors with a caliper twice a week, until the tumors reach a predetermined "target" size of 0.5 gm. Tumor weights (mg) were estimated from the formula: Tumor weight = $(\text{length} \times \text{width}^2) \div 2$

Tumor response end-point was expressed in terms of tumor growth inhibition (%T/C), defined as the ratio of median tumor weights of the treated tumors (T) to that of the control group (C).

To estimate tumor cell kill, the tumor volume doubling time was first calculated with the formula:

TVDT = Median time (days) for control tumors to reach target size -

Median time (days) for control tumors to reach half the target size s

And, Log cell kill = $(T-C) \div (3.32 \times TVDT)$

Statistical evaluations of data were performed using Gehan's generalized Wilcoxon test.

5

Dunning Prostate Tumor:

Dunning R3327H prostate tumor is a spontaneously derived, well differentiated androgen responsive adenocarcinoma of the prostate (Smolev JK, Heston WD, Scott WW, and Coffey DS, *Cancer Treat Rep.* 61, 273-287 (1977)). The growth of the R3327H subline has been selected for its highly androgen-dependent and reproducible growth in intact male rats. Therefore, this model and other sublines of this tumor have been widely used to evaluate *in vivo* antitumor activities of antiandrogens such as flutamide and bicalutamide/Casodex (Maucher A., and von Angerer, *J. Cancer Res. Clin. Oncol.*, 119, 669-674 (1993), Furr B.J.A. *Euro. URL.* 18 (suppl. 3), 2-9 (1990), Shain S.A. and Huot RI. *J. Steroid Biochem.* 31, 711-718 (1988)).

At the beginning of the study, the Dunning tumor pieces (about 4 x 4 mm) are transplanted subcutaneously to the flank of mature male Copenhagen rats (6-7 weeks old, Harlan-Sprague Dawley, Indianapolis, MD). About 6 weeks after the implantation, the animals with tumors of measurable size (about 80 - 120 mm²) are randomized into treatment groups (8-10 rats/group) and the treatments are initiated. One group of the rats are castrated to serve as the negative control of tumor growth. Animals are treated daily with compounds of the current invention, standard antiandrogens such as bicalutamide or vehicle (control) for an average of 10 to 14 weeks. Test compounds are dissolved in a vehicle of (2.5 ml/kg of body weight) 10% polyethylene glycol and 0.05% Tween-80 in 1% carboxymethyl cellulose, PEG/CMC, (Sigma, St Louis, MO). Typical therapeutic experiments would include three groups of three escalating doses for each standard or test compound (in a range of 300-3 mg/kg).

Tumors in the vehicle (control) group reach a size of 1500 to 2500 mm³, whereas the castrated animal group typically shows tumor stasis over the 14 weeks of observation. Animals treated orally with 20 mg/kg of bicalutamide or flutamide would be expected to show a 40% reduction in tumor volumes compared to control after 14 weeks of treatment. The size of tumors are measured weekly by vernier caliper (Froboz, Switzerland), taking perpendicular measurements of length and width. Tumor volumes are measured in mm³ using the formula: Length x Width x Height = Volume. Statistical differences between treatment groups and control are evaluated using multiple ANOVA analysis followed by one tail non-parametric Student t test.

Mature Rat Prostate Weight Assay:

The activity of compounds of the present invention were investigated in a mature male rat model, which is a variation of the Levator ani & wet prostate weight assay described above. The above *in vivo* assays are recognized assays for determining the anabolic effects in muscle and sustaining effects in sex organs for a given compound, as described in L. G. Hershberger *et al.*, 83 *Proc. Soc. Expt. Biol. Med.*, 175 (1953); B. L. Beyler *et al.*, "Methods for evaluating anabolic and catabolic agents in laboratory animals", 23 *J. Amer. Med. Women's Ass.*, 708 (1968); H. Fukuda *et al.*, "Investigations of the levator ani muscle as an anabolic steroid assay", 14 *Nago Dai. Yak. Ken. Nem.* 84 (1966) the disclosures of which are herein incorporated by reference. The basis of this assay lies in the well-defined action of androgenic agents on the maintenance and growth of muscle tissues and sexual accessory organs in animals and man.

The male sexual accessory organs, such as the prostate and seminal vesicles, play an important role in reproductive function. These glands are stimulated to grow and are maintained in size and secretory function by the continued presence of serum testosterone (T), which is the major serum androgen (>95%) produced by the Leydig cells in the testis under the control of the pituitary luteinizing hormone (LH) and follicle stimulating hormone (FSH). Testosterone is converted to the more active form, dihydrotestosterone, (DHT), within the prostate by 5 α -reductase.

Adrenal androgens also contribute about 20% of total DHT in the rat prostate, compared to 40% of that in 65-year-old men. F. Labrie *et. al.* 16 *Clin. Invest. Med.*, 475-492 (1993). However, this is not a major pathway, since in both animals and humans, castration leads to almost complete involution of the prostate and seminal vesicles without concomitant adrenalectomy. Therefore, under normal conditions, the adrenals do not support significant growth of prostate tissues, M. C. Luke and D. S. Coffey, "The Physiology of Reproduction" ed. By E. Knobil and J. D. Neill, 1, 1435-1487 (1994). Since the male sex organs and the levator ani are the tissues most responsive to modulation of the androgen activity, this model is used to determine the activity of compounds that modulate the androgen receptor pathway in mature rats.

Along with its mitogenic activity on tissues such as prostate, seminal vesicle and muscle, testosterone also serves as a negative regulator for its own biosynthesis. Testosterone production in the Leydig cells of the testis is controlled by the level of circulating LH released from the pituitary gland. LH levels are themselves controlled by the level of LHRH produced in the hypothalamic region. Testosterone levels in the blood serve to inhibit the secretion of LHRH and subsequently reduce levels of LH and ultimately the levels of circulating testosterone levels. By measuring blood levels of LH as they are effected by compounds of the present invention ("test compounds"), it is possible to determine the level of agonist or antagonist activity of said compounds at the hypothalamic axis of this endocrine cycle.

Matched sets of Harlan Sprague-Dawely rats (40-42 days old, 180-220 g), were dosed orally by gavage (p.o.) with the test compounds in dissolved/suspensions of 80% PEG 400 and 20% Tween 20 (PEGTW) for 14 days. Two control groups, one intact and one castrated were dose orally only with the PEGTW vehicle. Animals were dosed (v/w) at 0.5 ml of vehicle /100g body weight. Experimental groups were as follows:

1. Intact vehicle (p.o., PEGTW, QD)
2. Control vehicle (p.o., PEGTW, QD)
3. Bicalutamide (Casodex, a recognized antiandrogen, as a reference compound) or a compound of the present invention, p.o. in PEGTW QD. (in a range of doses).

At the end of the 14-day treatment, the animals were sacrificed, and the ventral prostate, the seminal vesicles, and the levator ani were removed surgically and weighed. To compare data from different experiments, the organs weights were first standardized as mg per 100 g of body weight, and expressed as a percentage of the value of the respective organ in the intact group.

Rat luteinizing hormone (rLH) is quantitatively determined with the Biotrak [125 I] kit (Amersham Pharmacia Biotek), following the manufacturer directions. The assay is based on the competition by the LH present in the serum of the binding of [¹²⁵I] rLH to an Amerlex-M bead/antibody suspension. The radioactivity that remains after incubation with the serum and subsequent washes is extrapolated into a standard curve to obtain a reading in ng/ml.

The gain and loss of sexual organ and levator ani weight reflect the changes of the cell number (DNA content) and cell mass (protein content), depending upon the serum androgen concentration, see Y. Okuda *et al.*, *J. Urol.*, 145, 188-191 (1991), the disclosure of which is herein incorporated by reference. Therefore, measurement of organ wet weight is sufficient to indicate the bioactivity of androgens and androgen antagonist. In the mature rats assay, active agonist agents will have no effect or will increase the weight of one or more of the androgen responsive organs (levator ani, prostate, seminal vesicle) and will have no effect or a suppressive effect on LH secretion. Compounds with antagonist activity will decrease the weight of one or more of the androgen responsive organs (levator ani, prostate, seminal vesicle) and will have no effect or a reduced suppressive effect on LH secretion.

CWR22 Human Prostate Xenograft Assay:

In Vivo Antitumor Testing: CWR22 human prostate tumors were maintained in Balb/c nu/nu nude mice. Tumors were propagated as subcutaneous transplants in adult male nude mice (4-6 weeks old) using tumor fragments obtained from donor mice. Tumor passage occurred every 5-6 weeks.

For antitumor efficacy trial, the required number of animals needed to detect a meaningful response were pooled at the start of the experiment and each was given a subcutaneous implant of a tumor fragment (~50 mg) with a

13-gauge trocar. Tumors were allowed to grow to approx. 100-200 mg (tumors outside the range were excluded) and animals were evenly distributed to various treatment and control groups. Treatment of each animal was based on individual body weight. Treated animals were checked daily for treatment related toxicity/mortality. Each group of animals was weighed before the initiation of treatment (Wt1) and then again following the last treatment dose (Wt2). The difference in body weight (Wt2-Wt1) provides a measure of treatment-related toxicity.

Tumor response was determined by measurement of tumors with a caliper twice a week, until the tumors reach a predetermined "target" size of 0.5 gm. Tumor weights (mg) were estimated from the formula: Tumor weight = $(\text{length} \times \text{width}^2) \div 2$.

Tumor response end-point was expressed in terms of tumor growth inhibition (%T/C), defined as the ratio of median tumor weights of the treated tumors (T) to that of the control group (C).

To estimate tumor cell kill, the tumor volume doubling time was first calculated with the formula:

$$\text{TVDT} = \frac{\text{Median time (days) for control tumors to reach target size} - \text{Median time (days) for control tumors to reach half the target size}}{\ln 2}$$

And, $\text{Log cell kill} = (T-C) \div (3.32 \times \text{TVDT})$

Statistical evaluations of data were performed using Gehan's generalized Wilcoxon test.

The following Examples illustrate embodiments of the present invention, and are not intended to limit the scope of the claims.

Abbreviations

The following abbreviations are used herein:

DBU = 1,8-diazabicyclo[5.4.0]undec-7-ene

4-DMAP = 4-dimethylaminopyridine

ee = enantiomeric excess

DMF = dimethylformamide

- Et = ethyl
EtOAc = ethyl acetate
LDA = lithium diisopropylamide
Hünig's Base = N,N-diisopropylethylamine
5 Me = methyl
RT = retention time
TFA = trifluoroacetic acid
THF = tetrahydrofuran
TLC = thin layer chromatography
10 TMS = trimethylsilyl
pTSA = para-toluenesulfonic acid
 Δ = heat
t-Bu = *tert*-butyl
Ph = phenyl
15 PhCH₃ = toluene
Pd/C = palladium on activated charcoal
TsCl = tosyl chloride
TBSOTf = *tert*-butyldimethylsilyl trifluoromethane sulfonate
TBS = *tert*-butyldimethylsilane
20 MeI = methyl iodide
(BOC)₂O = di-*tert*-butyl dicarbonate
TEA = triethylamine
n-BuLi = *n*-butyllithium
rt = room temperature
25 LC = liquid chromatography
EtOH = ethanol
DCE = dichloroethane
DMSO = dimethylsulfoxide
Ra-Ni = Raney Nickel
30 MS = molecular sieves
MS(ES) = Electro-Spray Mass Spectrometry

h = hours

Ac = acetyl

DEAD = diethyl azodicarboxylate

DPPA = diphenylphosphoryl azide

Example 1**(5 α ,8 α ,8 α)-8,8a-Dihydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (1B)****A. endo/exo-2-[[[3-(Trifluoromethyl)phenyl]amino]carbonyl]-2-azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid ethyl ester (1A)**

2-Azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid, ethyl ester (0.253 g, 0.15

mmol) was dissolved in toluene and 3-(trifluoromethylphenyl)isocyanate (0.311 g,

0.166 mmol) was added. The reaction was heated at 70°C for 3 h and then cooled to

-20°C for 12 h. The compound 1A precipitated upon cooling, was filtered and rinsed

with cold toluene. Upon drying *in vacuo* 0.097 g of 1A was recovered and taken on

into the next step with no further purification.

B. (5 α ,8 α ,8 α)-8,8a-Dihydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (1B)

The intermediate Compound 1A (0.150 g, mmol) was dissolved in toluene

(5 mL) and DBU (0.1 mL) was added. The reaction was heated at 80°C for 1.5 h and

then the toluene was removed *in vacuo*. The resulting residue was purified by flash

chromatography on SiO₂ eluting with 10% - 30% acetone in hexanes to give 0.76 g of

Compound 1B as a white solid. HPLC: 92% at 2.93 min (retention time) (YMC S5

ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes

containing 0.1% TFA, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 309.09
[M+H]⁺.

Example 2

- 5 **(5 α ,8 α ,8 α)-8,8a-Dihydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (2C)**
(Alternative procedure for preparation of 1B)

- 10 A. **endo/exo-2-(Chlorocarbonyl)-2-azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid, ethyl ester, (2A)**

- To a suspension of NaHCO₃ (2.5 g, 30 mmol) in CH₂Cl₂ at 25°C was added
15 phosgene (20% solution, 5.9 g, 12 mmol). 2-Azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid, ethyl ester (0.5 g, 3.0 mmol) was added and the reaction stirred at 25°C for 2 h. The bicarbonate was then filtered off and rinsed with CH₂Cl₂. The product was purified by flash chromatography on SiO₂, eluting with 1% - 2% MeOH in CH₂Cl₂ to give 0.367 g of intermediate Compound 2A as a yellow oil.

20

- B. **endo/exo-2-[[3-(Trifluoromethyl)phenyl]amino]carbonyl]-2-azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid ethyl ester (2B)**

Intermediate Compound 2A (0.100 g, 0.44 mmol) and 3-trifluoromethylaniline (0.075 mL, 0.44 mmol) were dissolved in 5.0 mL of toluene. Catalytic 4-DMAP and diisopropylamine (0.3 mL, 2.1 mmol) were then added. The reaction was heated at 50°C for 14 h. The volatile organics were then removed and the residue was purified by flash chromatography on silica gel eluting with 0.5% - 1.0% methanol/CH₂Cl₂ to give 0.39 g of intermediate Compound 2B as a pale yellow oil.

C. (5 α ,8 α ,8 α)-8,8a-Dihydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (2C)

The title compound was prepared as described in Example 1, step B.

Example 3

(5 α ,8 α ,8 α)-8,8a-Dihydro-2-[1-naphthalenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (3B)

A. endo/exo-2-[(1-Naphthalenylamino)carbonyl]-2-azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid ethyl ester (3A)

1-Naphthylamine (0.20 g, 1.39 mmol) was added to a solution of triphosgene (0.136 g, 0.46 mmol) in dichloroethane at 25°C. The solution was heated at 70°C for 30 min and then cooled to 25°C. Triethylamine (0.58 mL, 4.17 mmol) was then added and the reaction was heated to 70°C. After 2h, the reaction was cooled to 25°C and 2-azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid, ethyl ester (0.209 g, 1.25 mmol) was added. The reaction was stirred at 25°C for 14 h. The volatile organics were then removed *in vacuo* and the resulting residue was purified by flash chromatography on SiO₂ eluting with (4:1 – 1:1) ethyl acetate/hexanes to give 0.190 g of intermediate Compound 3A as a white solid.

B. (5 α ,8 α ,8a α)-8,8a-Dihydro-2-[1-naphthalenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (3B)

Intermediate Compound 3A (0.150 g) was dissolved in toluene (5 mL) and DBU (0.1 mL) was added. The reaction was heated at 80°C for 1.5 h and then the toluene was removed *in vacuo*. The resulting residue was purified by flash chromatography on SiO₂ eluting with 10% - 30% acetone in hexanes to give 0.76 g of Compound 3B as a white solid. HPLC: 95% at 3.067 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 291.2 [M+H]⁺.

Example 4

(5 α ,8 α ,8a α)-2,3,8,8a-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-3-thioxo-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-one (4B)

A. endo/exo-2-[[[3-(Trifluoromethyl)phenyl]amino]thioxomethyl]-2-azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid, ethyl ester (4A)

5 To a solution of 2-azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid, ethyl ester (0.253 g, 1.5 mmol) in toluene (7.0 mL) was added 3-(trifluoromethylphenyl)-isothiocyanate (0.339 g, 1.66 mmol). After 14 h at 25°C, the reaction was diluted with EtOAc and washed with 1N NaOH (2 x 10 mL). The organic layer was dried over anhydrous sodium sulfate and the crude material was purified by silica gel
10 chromatography using a gradient of 0 to 20% acetone in hexane to yield 188 mg (34%) of intermediate compound 4B.

B. (5 α ,8 α ,8 α)-2,3,8,8a-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-3-thioxo-5,8-methanoimidazo[1,5-a]pyridin-1(5H)-one (4B)

15 The intermediate compound 4A (180 mg, 0.5 mmol) was dissolved in anhydrous toluene (5 mL) and DBU (0.042 mL) was added. The reaction was heated at 80°C for 1.5 h and then cooled to 25°C. The volatiles were removed *in vacuo* and the resulting residue was purified by flash chromatography on SiO₂ eluting with a
20 gradient of 0 to 20% acetone/hexane giving pure compound 4B (67 mg) as a yellow oil. HPLC: 66.9% at 2.980 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.1% TFA, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 343.07 [M+H]⁺.

Example 5**(5 α ,8 α ,8 α)-8,8a-Dihydro-8a-methyl-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (5)**

5

Intermediate Compound 1B (0.020 g, 0.06 mmol, from Example 1) was dissolved in anhydrous THF (2.0 mL) and cooled to -78°C . LDA (2.0 M soln in THF, 0.195 mL) was then slowly added. After 1 h, MeI (0.008 mL, 0.12 mmol) was added and the reaction was slowly warmed to 25°C . The reaction was then quenched with water and extracted with CH_2Cl_2 (3 x 10 mL). The combined organic layers were dried over anhydrous sodium sulfate and concentrated *in vacuo* to give pure compound 5 (0.008 g) as a white solid. HPLC: 100% at 3.620 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 323.0 $[\text{M}+\text{H}]^+$.

20

Example 6**(5 α ,8 α ,8 α)-2,3,8,8a-Tetrahydro-8a-methyl-3-thioxo-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridin-1(5H)-one (6)**

To a solution of Compound 4B (0.056 g, 0.173 mmol, Example 4) in THF at -78°C was added lithium diisopropylamine (2.0 M soln in THF, 0.173 mL). After 2 h, MeI (0.022 mL, 0.35 mmol) was added and the reaction was warmed to 25°C over 2 h. H_2O was then added and the mixture extracted with CH_2Cl_2 (3 x 30 mL). The combined organic layers were dried over anhydrous sodium sulfate. The crude

product was purified by flash chromatography on SiO_2 eluting with 10% acetone in hexanes to give 0.034 g of Compound 6 as white solid. HPLC: 90% at 4.023 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min; monitoring at 220 nm) MS (ES): m/z 339.0 $[\text{M}+\text{H}]^+$.

Example 7

(5 α ,8 α ,8 α) & (5 α ,8 α ,8 α)-2-(3,5-Dichlorophenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (7Bi & 7Bii, respectively)

A. endo/exo-2-[[[3, 5-Dichlorophenyl]amino]carbonyl]-2-azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid ethyl ester (7A)

To a solution of 3,5-dichlorophenylisocyanate (3.01 g, 16 mmol) in toluene (100 mL) was added 2-azabicyclo[2.2.1]heptane-3-carboxylic acid, ethyl ester (2.70 g, 16.0 mmol) in toluene and the reaction stirred at 25°C for 14 h. A white solid formed after 14 h and diethyl ether was added to precipitate more product. The reaction was then filtered and rinsed with cold diethyl ether. The crude urea

intermediate, 2.81 g of a white solid, was isolated by filtration, dried and taken on directly to the next step.

5 B. (5 α ,8 α ,8 α) & (5 α ,8 α ,8 α)-2-(3,5-Dichlorophenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (7Bi & 7Bii)

Compound 7A (0.025 g, 0.070 mmol) was added to a suspension of freshly activated 4 Å MS (0.050 g) in toluene (2.0 mL). DBU (0.42 mL, 2.96 mmol) was then added followed by heating to 80°C for 2 h. The mixture was then cooled to 25°C and filtered through celite rinsing with methylene chloride. The organics were washed with 1 N HCl and then dried over anhydrous sodium sulfate. Crude NMR showed a mixture of Compound 7Bi and Compound 7Bii, in a ratio of 2:1.5, respectively. The diastereomers were separated by preparative TLC on SiO₂, eluting with methylene chloride. This gave 0.006 g of Compound 17Bi as a white solid and 0.008 g of Compound 17Bii as a white solid. 17Bi: HPLC: 100% at 3.383 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 312.1 [M+H]⁺. 17Bii: HPLC: 99% at 3.497 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 311.2 [M+H]⁺.

Example 8

Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-ethanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (8B)

A. 2-[[[3-(Trifluoromethyl)phenyl]amino]carbonyl]-2-azabicyclo[2.2.2.]octane-3-carboxylic acid, ethyl ester (8A)

- 5 To a solution of 2-azabicyclo[2.2.2.]octane-3-carboxylic acid, ethyl ester (50 mg, 0.27 mmol) in anhydrous toluene (10 mL) was added 3-(trifluoromethylphenyl)isocyanate (55.5 mg, 0.3 mmol). The reaction was stirred at 25°C overnight, and then concentrated *in vacuo* and purified by preparative TLC on silica gel eluting with 30% acetone in hexanes to provide 37 mg (37%) of
- 10 intermediate Compound 8A.

B. Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-ethanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (8B)

- 15 To a solution of intermediate Compound 8A (37 mg, 0.1 mmol) in anhydrous toluene (10 mL) was added DBU (20 μ L, 0.11 mmol). The solution was heated at 80°C for 2 hours. The solvent was removed by rotary evaporation and the crude material was purified by preparative TLC on silica gel eluting with 30% acetone in hexanes to provide 16 mg (49%) of Compound 8B as a white solid.
- 20 HPLC: 99% at 3.433 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 325.2 $[M+H]^+$.

Example 9

(5 α ,8 α ,8 α) & (5 α ,8 α ,8 β)-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (9Fi & 9Fii, respectively)

Solid Support Synthesis Route

5

**A. Formation of Modified Merrifield Resin (9A)**

10

To a suspension of NaH (60% in mineral oil, 0.353 g, 8.84 mmol) in DMF at 0°C was slowly added 3-(4-hydroxyphenyl)-1-propanol (1.3 g, 8.55 mmol), and then warmed to 25°C and stirred for 1 h. Merrifield resin (5 g, 0.57 mmol/g) was washed sequentially with methylene chloride, DMF and then suspended in 20 mL of DMF. To the resin was added the preformed alkoxide over a 5 minute period. The reaction was then heated at 80°C for 13 h. After cooling to 25°C, the reaction was filtered and rinsed sequentially with DMF (3x50 mL), hexanes (2x50 mL), methylene chloride (3x50 mL), methanol (2x50 mL), methylene chloride (3x50 mL) and dried under vacuum to give a white resin (4.6 g). Solid phase proton NMR demonstrated incorporation of the 3-(4-hydroxyphenyl)-1-propanol linker, to form Resin 9A.

20

B. endo/exo-2-Azabicyclo[2.2.1]heptane-2,3-dicarboxylic acid 2-(1,1-dimethylethyl) ester (9B)

2-Azabicyclo[2.2.1]heptane-3-carboxylic acid, ethyl ester (10.0 g, 59.0 mmol) was dissolved in a mixture of dioxane (120 mL), water (60 mL) and 1 N NaOH (66 mL). (BOC)₂O (14.4 g, 218.25 mmol) was then added and the mixture was stirred at rt for 14 h. The volatile organics were removed *in vacuo* and additional water (200 mL) was then added and the mixture was extracted with CH₂Cl₂ (2 x 200 mL). The aqueous layer was then adjusted to pH = 4-5 with the addition of 5% KHSO₄. The mixture was then extracted with CH₂Cl₂ (3 x 100 mL). The combined organic layers were concentrated to give crude intermediate Compound 9B as a white solid (8.5 g). This material was taken on without purification.

C. endo/exo-2-Azabicyclo[2.2.1]heptane-2,3-dicarboxylic acid, 2-(1,1-dimethylethyl) 3-(Modified Merrifield Resin) ester (9C)

To Resin 9A was added DMF (15 mL) followed by shaking for 15 minutes. Compound 9B (0.275 g, 1.14 mmol) was then added in DMF followed by pyridine (0.152 mL, 1.88 mmol). 2,6-Dichlorobenzoyl chloride (0.163 mL, 1.14 mmol) was added and the reaction was shaken for 1 day. Identical amounts of acid, pyridine and chloride were then added followed by shaking for 2 days. The reaction was then filtered and rinsed sequentially with DMF (3x20 mL), methanol (3x20 mL), methylene chloride (6x20 mL) and dried *in vacuo* to give Resin 9C as a white powder.

D. endo/exo-2-Azabicyclo[2.2.1]heptane-3-carboxylic acid, Modified Merrifield Resin ester (9D)

The Resin 9C (1 g) was suspended in 50% TFA/DMF (30 mL) and sonicated at 60°C for 18 h. The reaction was then filtered and washed with DMF (5x20 mL), methanol (2x20 mL), methylene chloride (2x20 mL) and dried under vacuum to give 0.7 g of Resin 9D as a white powder.

E. endo/exo-2-[[[3-(Trifluoromethyl)phenyl]amino]carbonyl]-2-azabicyclo[2.2.1]heptane-3-carboxylic acid, Modified Merrifield Resin ester, (9E)

The Resin 9D (0.50 g) was suspended in CH_2Cl_2 (10 mL) and 3-(trifluoromethylphenyl)isocyanate (0.5 mL, 1.25 mmol) was added and the reaction was shaken for 24 h. The resin was filtered and washed with CH_2Cl_2 (8x20 mL) and dried *in vacuo* to give Resin 9E as a yellow solid.

F. (5 α ,8 α ,8 $\alpha\alpha$) & (5 α ,8 α ,8 $\alpha\beta$)-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (9Fi & 9Fii)

To Resin 9E was added dry toluene (10 mL) and 0.25 g of activated 4Å MS. DBU (0.25 mL) was then added and the reaction was heated to 80°C for 1.5 h.

The reaction was filtered and rinsed with CH_2Cl_2 and the organics were washed once with 1 N HCl followed by drying over anhydrous sodium sulfate. The resulting process yielded 24 mg (26 % yield from loading of Merrifield resin) of a 4 to 1

mixture of Compounds 9Fi & 9Fii, respectively. Separation of Compounds 9Fi & 9Fii was achieved by preparative HPLC (0% - 100% aqueous methanol over 20 minutes, YMC ODSA reverse phase column, 20x100 mm) to yield 0.005 g of Compound 9Fi as a white solid and 0.019 g of Compound 9Fii as a white solid. See

5 Example 11 and 12 for characterization.

Example 10

(5 α ,8 α ,8 α) & (5 α ,8 α ,8 β)-Tetrahydro-2-(2-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (10Ci & 10Cii, respectively)

10

A. **endo/exo-2-(Chlorocarbonyl)-2-azabicyclo[2.2.1]heptane-3-carboxylic acid Modified Merrifield Resin ester (10A)**

15

The Resin 9D (0.50 g, synthesized as described in Example 9) was suspended in CH_2Cl_2 (10 mL) and phosgene (20% in toluene, 4.5 g) and NaHCO_3 (1.5 g) were added. The resin was shaken for 22 h at 22°C and then filtered rinsing with CH_2Cl_2 (5 x 50 mL). The resin was then dried *in vacuo* to give Resin 10A as a yellow resin.

20

B. **endo/exo-2-[(2-Naphthalenylamino)carbonyl]-2-azabicyclo[2.2.1]heptane-3-carboxylic acid Modified Merrifield Resin ester (10B)**

The Resin 10A (0.70 g) was suspended in CH_2Cl_2 (15 mL) and 2-naphthal amine (0.58 g, 4.0 mmol) was added. Hünig's base (0.88 mL) and catalytic 4-DMAP were added and the mixture was shaken at 70°C for 20 h. After cooling to 22°C , the resin was filtered and washed with CH_2Cl_2 (8x20 mL) and dried *in vacuo* to give Resin 10B as a yellow solid.

C. (5 α ,8 α ,8 $\alpha\alpha$) & (5 α ,8 α ,8 $\alpha\beta$)-Tetrahydro-2-(2-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (10Ci & 10Cii)

10

To the Resin 10B (0.70 g) was added dry toluene (10 mL) and 0.25 g of activated 4Å MS. DBU (0.65 mL, 4.0 mmol) was then added and the reaction was heated to 80°C for 2.0 h. The reaction was filtered and rinsed with CH_2Cl_2 and the organics were washed twice with 1 N HCl (30 mL) followed by drying over anhydrous sodium sulfate. The resulting process yielded 13 mg (11 % yield) of a 1.5 to 1 mixture of Compound 10Ci and 10Cii, respectively. Separation of the mixture was achieved by flash chromatography on SiO_2 eluting with 1% MeOH in CH_2Cl_2 to yield 6 mg of 10Ci as a white solid and 4 mg of Compound 10Cii as a white solid.

10Ci: HPLC: 99% at 2.94 minutes (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/ H_2O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection) MS (ES): m/z 293.0 [M+H]⁺. 10Cii: HPLC: 99% at 3.09 minutes (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/ H_2O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection) MS (ES): m/z 293.0 [M+H]⁺.

20

Example 11**(5 α ,8 α ,8a β)-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (11)**

- 5 To a suspension of freshly activated 4Å MS (1.5 g) in toluene (15 mL) was added 2-azabicyclo[2.2.1]heptane-3-carboxylic acid, ethyl ester (0.50 g, 2.96 mmol) in toluene. After 15 min, 3-(trifluoromethyl)-phenylisocyanate (0.41 mL, 2.96 mmol) was added and the reaction stirred at 25°C for 14 h. DBU (0.42 mL, 2.96 mmol) was then added followed by heating to 80°C for 2 h. The mixture was then cooled to 25°C
- 10 and filtered through celite rinsing with methylene chloride. The organics were taken to dryness and allowed to stand neat in the remaining DBU at 35°C for 5 h. The crude mixture was purified by silica gel chromatography to yield 735 mg (80.1 % yield) of Compound 11 as a white solid. HPLC: 98% at 3.117 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4
- 15 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 311.1 [M+H]⁺.

Example 12

- 20 **(5 α ,8 α ,8a α) & (5 α ,8 α ,8a β)-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (12i & 12ii, respectively)**

- LDA was prepared by treating diisopropyl amine (0.091 mL, 0.650 mmol) in THF at -78°C with n-BuLi (1.6 M in hexanes, 0.304 mL). After 20 min,
- 25 Compound 11 (0.100 g, 0.325 mmol) was slowly added to the LDA in THF. The

reaction was slowly warmed to -20°C and held for 15 min. The reaction was then cooled to -78°C and quenched by the addition of sat NH_4Cl . The solution was then extracted with CH_2Cl_2 (3 x 30 mL) and the organics were dried over anhydrous sodium sulfate. The crude material was purified by preparative TLC on SiO_2 eluting with CH_2Cl_2 to give a 1:3 mixture of Compound 12i (Compound 11) & 12ii (0.091 g, 91%) as a white solid. 12ii: HPLC: 98% at 2.987 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 311.1 $[\text{M}+\text{H}]^+$.

10

Example 13

(5 α ,8 α ,8 α) & (5 α ,8 α ,8 β)-[2-(3,4-Dichlorophenyl)octahydro-1-oxo-5,8-methanoimidazo[1,5-a]pyridin-3-ylidene]amino] (13Bi & 13Bii, respectively)

15

A. endo/exo-2-[(Cyanimino)[(3,4-dichlorophenyl)amino]methyl]-2-azabicyclo[2.2.1]heptane-3-carboxylic acid ethyl ester (13A)

2-Azabicyclo[2.2.1]heptane-3-carboxylic acid, ethyl ester (169 mg, 1.0 mmol, 1 eq) was combined in dimethylformamide with N-cyano-N'-(3,4-dichlorophenyl)-thiourea (246 mg, 1.0 mmol, 1 eq) and 1-[3-(dimethylamino)propyl]-3-ethylcarbodiimide hydrochloride (288 mg, 1.5 mmol, 1.5 eq). The mixture was stirred at ambient temperature overnight. The reaction was quenched with 1M aqueous citric acid and extracted with CH_2Cl_2 . The combined organic extracts were

dried and concentrated *in vacuo*. The crude material was purified by flash chromatography on silica gel eluting with 30% acetone in hexanes to provide 192 mg (50.4%) of Compound 13A as a white semi-solid. HPLC: 100% at 3.260 minutes (YMC Combiscreen ODS-A S5 column eluting with 10-90% aqueous methanol over a 4 minute gradient.) MS (ES): m/z 381. $[M+H]^+$.

B. (5 α ,8 α ,8 $\alpha\beta$) & (5 α ,8 α ,8 $\alpha\beta$)-[[2-(3,4-Dichlorophenyl)octahydro-1-oxo-5,8-methanoimidazo[1,5-a]pyridin-3-ylidene]amino] (13Bi & 13Bii)

Compound 13A (180 mg, 0.47 mmol, 1 eq) was combined in anhydrous toluene with DBU (72 mg, 0.47 mmol, 1 eq). The solution was heated at 60°C for 1 h. TLC (SiO₂ plate, 1% CH₃OH in CH₂Cl₂) showed no starting material remaining, while LC monitoring indicated a peak with the same retention time as the starting material. The reaction was quenched with saturated aqueous NH₄Cl and extracted with CH₂Cl₂. The combined organic extracts were dried and concentrated *in vacuo*. The crude material was purified by flash chromatography on silica gel eluting with 0.5% CH₃OH in CH₂Cl₂ to provide two isomers. Compound 13Bi was obtained in 52% yield (82 mg) as white semi-solid. HPLC: 100% at 3.297 minutes (YMC Combiscreen ODS-A S5 column eluting with 10-90% aqueous methanol over a 4 minute gradient.) MS(ES): 335.08 $[M]^+$. Compound 13Bii was obtained in 25% yield (40 mg) as white solid. HPLC: 100% at 3.323 minutes (YMC Combiscreen ODS-A S5 column eluting with 10-90% aqueous methanol over a 4 minute gradient.) MS (ES): m/z 335.06 $[M]^+$ & 337.07 $[M+2H]^+$.

Example 14**(5 α ,8 α ,8 α)-8a-[(4-Bromophenyl)methyl]-2-(3,5-Dichlorophenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (14)**

5

- Compound 7Bi (0.217 g, 0.701 mmol, prepared as described in Example 7) was added to freshly prepared LDA (1.227 mmol n-BuLi, 1.402 mmol diisopropylamine) in THF at -78°C. After addition, the reaction was slowly warmed to -20°C and kept at that temperature for 20 minutes. The mixture was then cooled to
- 10 -78°C and 4-bromobenzyl bromide (0.175 g, 0.701 mmol) was added in THF. The reaction was then warmed to 0°C and after 2h, quenched by the addition of saturated aq. NH₄Cl. The solution was then extracted with CH₂Cl₂ (2 x 30 mL) and dried over anhydrous sodium sulfate. The resulting material was purified by preparative silica gel TLC eluting with CH₂Cl₂ to give Compound 14 (0.083 g) as a clear oil. HPLC:
- 15 98% at 4.160 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 481.1 [M+H]⁺

Example 15**(5 α ,8 α ,8a α)-Hexahydro-2-(2-naphthaleny)-3-(phenylimino)-5,8-methanoimidazo[1,5-a]pyridine-1(5H)-one (15B)**

5

A. N-(2-Naphthalenyl)-2-azabicyclo[2.2.1]heptane-3-carboxamide (15A)

10 The intermediate Compound 9B (1.00 g, 4.15 mmol, as prepared in Example 9) was dissolved in CH₂Cl₂ (8.0 mL) and TEA (2.31 mL, 16.6 mmol) and 2,6-dichlorobenzoyl chloride (0.549 mL, 4.15 mmol) were added. The mixture was stirred for 14 h and 2-aminonaphthal (0.593 g, 4.15 mmol) was added in CH₂Cl₂ followed by addition of 4-DMAP (0.010 g). After 3h, the reaction was diluted with

15 CH₂Cl₂ and washed once with 1N HCl (40 mL), once with sat aq NaHCO₃ (40 mL) and dried over anhydrous sodium sulfate. The crude intermediate (1.00 g, 2.73 mmol) was dissolved in CH₂Cl₂ (2.0 mL) and treated with TFA (2.0 mL) at 20°C. After 3h, the reaction was quenched with saturated aq. NaHCO₃ and extracted with CH₂Cl₂ (3 x 30 mL) and dried over anhydrous sodium sulfate. The crude reaction was purified by

20 preparative reverse phase HPLC to give 0.770 g of Compound 15A as a white solid.

B. (5 α ,8 α ,8a α)-Hexahydro-2-(2-naphthaleny)-3-(phenylimino)-5,8-methanoimidazo[1,5-a]pyridine-1(5H)-one (15B)

The intermediate Compound 15A (0.050 g, 0.188 mmol) was dissolved in dichloroethane (2.0 mL) and the phenyl isocyanide dichloride (0.026 mL, 0.188 mmol), 4-DMAP (0.010 g) and DBU (0.084 mL, 0.564 mmol) were added and the reaction was heated to 90°C in a sealed tube. After 14 h, the reaction was cooled to room temperature and concentrated *in vacuo*. The residue was purified by preparative TLC on SiO₂ eluting with CH₂Cl₂/acetone (9:1) to give 0.063 g of Compound 15B as a tan oil. HPLC: 93% at 3.590 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 368.37 [M+H]⁺

Example 16

Hexahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-
1(5H)-one (16)

15 Compound 4B (0.020 g, 0.062 mmol, as described in Example 4) was dissolved in absolute EtOH (2.0 mL) and Ra-Ni (excess) was added. After 3 h at 25°C, the reaction was filtered thru celite rinsing with EtOH. The crude material was purified by preparative TLC eluting with 30% acetone in hexanes, yielding 0.6 mg of Compound 16 as a white solid. HPLC: 100 % at 2.437 min (retention time) (YMC S5 20 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 297.3 [M+H]⁺.

Alternative preparation of Compound 16:

A. (5 α , 8 α , 8 α)-Hexahydro-3-thioxo-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridin-1(5H)-one (16A)

5 2-Azabicyclo[2.2.1.]hept-5-ene-3-carboxylic acid, ethyl ester (0.250 g, 0.15 mmol) was dissolved in toluene and 3-(trifluoromethylphenyl)isothiocyanate (0.334 g, 0.166 mmol) was added. The reaction was stirred at 25 °C for 14 h and then 1N NaOH (4 mL) was added. After half hour, the aqueous layer was extracted with dichloromethane (3 x 25 mL). The combined organic layers were washed with brine
10 (50 mL) and dried over Na₂SO₄ and then the solvent was removed *in vacuo*. The resulting residue was purified by flash chromatography on SiO₂ eluting with 10% - 30% acetone in hexanes to give 0.378 g of compound 16A as a yellow solid.

15 B. Hexahydro-2-[3-trifluoromethylphenyl]-5,8-methanoimidazo[1,5-a]pyridine-1(5H)-one (16b or 16)

Compound 16A (0.020 g, 0.062 mmol) was dissolved in ethanol (2 mL) and Ra-Ni (~0.020 g) was added. After 3 h, the reaction mixture was filtered through celite, concentrated, and the resulting residue purified by preparative TLC on silica
20 eluting with 30% acetone in hexanes to give 0.8 mg of 16B as a white solid. HPLC: 99% at 2.437 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.1% TFA, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 297.3 [M+H]⁺.

Example 17

[5R-(5 α ,8 α ,8 α)] & [5R-(5 α ,8 α ,8 α)]-Tetrahydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (17i & 17ii, respectively)

5

R-2-Azabicyclo[2.2.1]heptane-3-carboxylic acid, ethyl ester (0.169 g, 1.0 mmol) was dissolved in toluene (10 mL) with freshly activated 4Å MS (0.200 g). To this was added a solution of 4-nitro-1-naphthyl isocyanate (0.210 g, 1.0 mmol), prepared analogously to the procedure described in Example 3 step A) in 5 ml of toluene. After 15 h, the reaction was complete by LC, and DBU (0.224 mL, 1.5 mmol) was added and the reaction was heated at 80°C for 1.5 h. After cooling to rt, the reaction was filtered and then poured into 1 N HCl and extracted with CH₂Cl₂ (2 x 30 mL). The organics were dried over anhydrous sodium sulfate and then concentrated. The crude mixture was determined to be a 1:2 ratio of Compound 17i and 17ii, respectively. The reaction mixture was separated by flash chromatography on silica gel eluting with CH₂Cl₂/acetone (1% acetone) to give Compound 17i: HPLC: 98% at 2.923 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 338.1 [M+H]⁺ and Compound 17ii: HPLC: 96% at 2.753 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 338.1 [M+H]⁺. Both were determined to be 94% ee by chiral HPLC analysis.

25

Example 18

(6 α ,9 α ,9 α)-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-6,9-methano-2H-pyrido[1,2-d][1,2,4]triazine-1,4(3H,9aH)-dione (18D)

5

A. 3-[[[3-(Trifluoromethyl)phenyl]amino]carbonyl]-2-azabicyclo[2.2.1]heptane-2-carboxylic acid 1,1-dimethylethyl ester (18A)

10

Intermediate Compound 9B (964 mg, 4 mmol, 1 eq, Example 9) was dissolved in 20 mL of tetrahydrofuran and 1-methyl-2-pyrrolidinone (487 μ L, 4 mmol, 1 eq) was added followed by methyl chloroformate (309 μ L, 4 mmol, 1 eq). The mixture was stirred at rt for 15 min. 3-(Trifluoromethyl)aniline (499 μ L, 4 mmol, 1 eq) was then added, and the reaction was stirred at rt for 72 h. The reaction was quenched by addition of water and 0.1 M aqueous citric acid. The mixture was extracted with CH_2Cl_2 . The combined organic extracts were dried, concentrated *in vacuo*, and purified by flash chromatography on silica gel eluting with 0.3 % methanol in CH_2Cl_2 to provide 640 mg (41.6%) of intermediate Compound 18A.

15

20

B. 3-[[[1-[3-(Trifluoromethyl)phenyl]hydrazino]carbonyl]-2-azabicyclo[2.2.1]heptane-2-carboxylic acid 1,1-dimethylethyl ester (18B)

Compound 18A (308 mg, 0.8 mmol, 1 eq) was dissolved in 15 mL of tetrahydrofuran. Sodium hydride (60% in oil, 38 mg, 0.96 mmol, 1.2 eq) was added, and the mixture was stirred at rt for 15 min. O-Diphenylphosphinylhydroxylamine (224 mg, 0.96 mmol, 1.2 eq) was then added, and the reaction was stirred at rt for 1 h.

5 LC analysis indicated that the starting material had been consumed. Water was added, and the reaction was extracted with CH_2Cl_2 . The combined organic extracts were dried and concentrated *in vacuo* to provide Compound 18B as a semi-solid in quantitative yield. The compound was used without further purification. LC: R.T.= 3.39 min (retention time) (YMC Combiscreen ODS-A S5 column eluting with 10-90% aqueous methanol over a 4 minute gradient.)

C. 2-Azabicyclo[2.2.1]heptane-3-carboxylic acid 1-[3-(trifluoromethyl)-phenyl]hydrazide (18C)

15 Compound 18B (136 mg, 0.34 mmol, 1 eq) was dissolved in 5 mL of CH_2Cl_2 . Trifluoroacetic acid (2 mL) was added, and the mixture was stirred at rt for 1 h. LC analysis showed complete conversion to Compound 18C. The crude material was concentrated *in vacuo* and taken on to the next step.

D. (6 α ,9 α ,9 α)-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-6,9-methano-2H-pyrido[1,2-d][1,2,4]triazine-1,4(3H,9aH)-dione (18D)

Compound 18C was dissolved in 10 mL of CH_2Cl_2 , and Hünig's base (10 eq) was added to bring the pH to 10. The mixture was cooled to 10°C. Triphosgene (approx. 1.5 eq) was dissolved in CH_2Cl_2 and added dropwise to the reaction mixture. The reaction was stirred at 0°C and then allowed to stir at rt overnight. LC analysis indicated that the starting material had been consumed. The mixture was washed with

saturated aqueous NH_4Cl followed by saturated aqueous NaCl . The CH_2Cl_2 layer was dried, concentrated *in vacuo* and purified by flash chromatography on silica gel eluting with 2% methanol in CH_2Cl_2 . The material was purified further by preparative LC to provide 15 mg (14%) of Compound 18D as a light yellow solid. HPLC: 100% at 2.523 min (retention time) (YMC Combiscreen ODS-A S5 column eluting with 10-90% aqueous methanol over a 4 minute gradient.) MS (APCI): m/z 326.2 $[\text{M}+\text{H}]^+$

Example 19

(5 α ,8 α ,8 α) & (5 α ,8 α ,8 α β)-8,8a-Dihydro-2-(1H-indol-3-yl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (19Bi & 19Bii, respectively)

A. 3-Isocyanatoindole (19A)

15

To a solution of indole-3-carboxylic acid (1 g, 6.20 mmol, 1 eq) in 30 mL of tetrahydrofuran was added triethylamine (0.86 mL, 6.20 mmol, 1 eq) and diphenylphosphoryl azide (1.3 mL, 6.20 mmol, 1 eq). The reaction was stirred at rt overnight. The mixture was concentrated *in vacuo* and purified by flash chromatography on silica gel eluting with 25% ethyl acetate in hexanes to provide a quantitative yield of the intermediate azide. The azide was heated at 100°C in 60 mL of toluene for 5 h. Concentration *in vacuo* gave complete conversion to Compound 19A which was used directly in the next step.

25 B. (5 α ,8 α ,8 α) and (5 α ,8 α ,8 α β)-8,8a-Dihydro-2-(1H-indol-3-yl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (19Bi & 19Bii)

To Compound 19A (6.20 mmol, 1 eq) in 50 mL of toluene at rt under Ar was added a solution of 2-azabicyclo[2.2.1]heptane-3-carboxylic acid, ethyl ester (1.03 g, 6.20 mmol, 1 eq) in 10 mL of toluene with 4Å MS. TLC analysis after several hours indicated that the starting material had been consumed. DBU (0.93 mL, 6.20 mmol, 1 eq) was added and the reaction was warmed at 80°C for 3 h. The mixture was cooled, filtered, and purified by flash chromatography on silica gel eluting with 50% acetone in hexanes to provide 120 mg (7%) of Compound 19Bi as yellowish tan crystals. An additional 495 mg (29%) of material was a 4:1 mixture of 19Bi & 19Bii, respectively. HPLC: 94% at 2.17 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm). MS (APCI): m/z 279.8 [M+H]⁺

Example 20

(5 α ,8 α ,8a α)-2-(Benzo[b]thiophene-3-yl)-8,8a-dihydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (20B)

A. 3-Aminobenzothiophene (20A)

To a solution of 3-amino-benzo[b]thiophene-2-carboxylic acid, methyl ester (1 g, 4.83 mmol, 1 eq) in 1-methyl-2-pyrrolidinone (8 mL) was added piperazine (2.08 g, 24.13 mmol, 5 eq). The reaction was stirred at 130°C overnight. Ice was added, and the mixture was extracted with ethyl acetate. The organic extracts were washed twice with water, dried, and concentrated *in vacuo*. The crude material was purified by flash chromatography on silica gel eluting with 40% ethyl acetate in hexanes to provide 600 mg (83%) of Compound 20A as a yellow oil.

B. (5 α ,8 α ,8 α)-2-(Benzo[b]thiophene-3-yl)-8,8a-dihydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (20B)

Compound 20A (480 mg, 3.22 mmol, 1 eq) was added to a mixture of
 5 phosgene (20% in toluene, 6.38 g, 12.88 mmol, 4 eq) and NaHCO₃ (2.7 g, 32.2 mmol, 10 eq) in CH₂Cl₂ (50 mL). The resulting mixture was stirred at rt under N₂ for 10 min, filtered to remove NaHCO₃ and concentrated *in vacuo* without heating. To the resulting isocyanate was added 2-azabicyclo[2.2.1]hept-5-ene-3-carboxylic acid, ethyl ester (599 mg, 3.54 mmol, 1.1 eq) in 25 mL of toluene with 4Å MS. The
 10 reaction was stirred at rt overnight. DBU (0.48 mL, 3.22 mmol, 1 eq) was added and the reaction was warmed at 76°C for 2 hr. The mixture was cooled, filtered through celite, and poured into saturated aqueous NH₄Cl solution. The mixture was extracted with CH₂Cl₂. The organic extracts were concentrated *in vacuo* and purified by flash chromatography on silica gel eluting with 0.6% methanol in CH₂Cl₂ to provide 480
 15 mg (50.4%) of Compound 20B as a light yellow solid. HPLC: 99% at 2.57 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 297.1 [M+H]⁺.

Example 21
(5 α ,8 α ,8 α) & (5 α ,8 α ,8 β)-2-(1,2-Benzisoxazol-3-yl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H, 5H)-dione (21Bi & 21Bii, respectively)

A. endo/exo-2-[(1,2-Benzisoxazol-3-ylamino)-2-azabicyclo[2.2.2]octane-3-carboxylic acid ethyl ester (21A)

1,2-Benzisoxazol-3-amine (134 mg, 1 mmol, 1 eq) was added to phosgene (20% in toluene, 0.5 mL, 1 mmol, 1 eq) in 5 mL of ethyl acetate at -5°C. The reaction was allowed to warm to rt and then heated at reflux for 40 min. The mixture was cooled to rt and 2-azabicyclo[2.2.1.]heptane-3-carboxylic acid, ethyl ester (422 mg, 2.5 mmol, 2.5 eq) was added. The reaction was stirred at reflux for 2 h. The mixture was poured into water and extracted with CH₂Cl₂. The organic extracts were concentrated *in vacuo* and purified by flash chromatography on silica gel eluting with CH₂Cl₂ to provide 148 mg (45.0%) of Compound 21A as a light yellow solid.

B. (5 α ,8 α ,8 $\alpha\alpha$) & (5 α ,8 α ,8 $\alpha\beta$)-2-(1,2-Benzisoxazol-3-yl)tetrahydro-5,8-methanolimidazo[1,5-a]pyridine-1,3(2H, 5H)-dione (21Bi & 21Bii)

Intermediate Compound 21A (140 mg, 0.42 mmol, 1 eq) was dissolved in toluene with 4Å MS. DBU (65 mg, 0.42 mmol, 1 eq) was added and the reaction was stirred at 80°C for 1 h. The mixture was quenched with 5% aqueous HCl and extracted with CH₂Cl₂. The organic extracts were dried, concentrated *in vacuo*, and purified by flash chromatography on silica gel eluting with CH₂Cl₂ to provide 16 mg (13.4%) of Compound 21Bi and 47 mg (39.5%) of Compound 21Bii. Compound 21Bi: HPLC: 93% at 2.367 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 284.12 [M+H]⁺. Compound 21Bii: HPLC: 95% at 2.517 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm) MS (ES): m/z 284.13 [M+H]⁺.

Examples 22 to 88

Using the procedures described herein or by modification of the procedures described herein readily available to one of ordinary skill in the art, the following

additional compounds of Table 2 were prepared. Those of the following compounds which were prepared enantiomerically pure are so indicated in the structure box by the nomenclature (R) or (S). Those compounds not so indicated were racemic mixtures which can readily be separated by one of ordinary skill in the art or prepared enantiomerically pure by the procedures described herein.

Table 2

The chromatography techniques used to determine the compound retention times of Table 2 are as follows:

LC = YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% MeOH/H₂O over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm

LCMS = YMC S5 ODS column, 4.6 X 50 mm eluting with 10-90% MeOH/H₂O over 4 minutes containing 0.1% TFA; 4 mL/min, monitoring at 220 nm

Ex. No.	Compound Structure	Compound Name	Retention Time Min.	Procedure of Example
22.		(5α,8α,8aa)-2-(1-naphthalenyl)-3-thioxo-5,8-methanoidazo[1,5-a]pyridin-1(5H)-one	3.093 LC	1
23.		(5α,8α,8aa)-2-[3,5-bis(trifluoromethyl)phenyl]-8,8a-dihydro-5,8-methanoidazo[1,5-a]pyridin-1,3(2H,5H)-one	2.930 LC	1
24.		(5α,8α,8aa)-8,8a-dihydro-2-(2-naphthalenyl)-5,8-methanoidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.360 LC	3

Ex. No.	Compound Structure	Compound Name	Retention Time Min.	Procedure of Example
25.		(5α,8α,8aα)-2-(3,5-Dichlorophenyl)-8,8a-dihydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.823 LC	1
26.		Tetrahydro-2-(1-naphthalenyl)-5,8-ethanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.433 LC	8
27.		(5α,8α,8aα)-2-(4-Bromo-1-naphthalenyl)-8,8a-dihydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.767 LC	1
28.		[5R-(5α,8α,8aβ)]-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.117 LC	7
29.		[5S-(5α,8α,8aβ)]-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.117 LC	7
30.		[5R-(5α,8α,8aβ)]-2-(3,5-Dichlorophenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	4.017 LC	17
31.		[5S-(5α,8α,8aβ)]-2-(3,5-Dichlorophenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	4.017 LC	17

Ex. No.	Compound Structure	Compound Name	Retention Time Min.	Procedure of Example
32.	 Chiral	[5R-(5α,8α,8aβ)]-2-(4-Bromo-1-naphthalenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.847 LC	17
33.	 Chiral	[5S-(5α,8α,8aβ)]-2-(4-Bromo-1-naphthalenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.807 LC	17
34.		(5α,8α,8aα)-Tetrahydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.840 LC	11
35.		(5α,8α,8aβ)-Tetrahydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.980 LC	11
36.		(5α,8α,8aα)-Hexahydro-3-thioxo-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1(5H)-one	3.360 LC	11
37.		(5α,8α,8aβ)-Hexahydro-3-thioxo-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1(5H)-one	3.443 LC	11
38.		(5α,8α,8aβ)-Hexahydro-2-(1-naphthalenyl)-3-thioxo-5,8-methanoimidazo[1,5-a]pyridine-1(5H)-one	3.487 LC	11
39.		(5α,8α,8aα)-Tetrahydro-8a-methyl-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.060 LC	6

Ex. No.	Compound Structure	Compound Name	Retention Time Min.	Procedure of Example
40.		(5α,8α,8aβ)-8,8a-Dihydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.880 LC	1
41.		(5α,8α,8aα)-Tetrahydro-8a-(2-propenyl)-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.390 LC	5
42.		(5α,8α,8aα)-Tetrahydro-8a-(phenylmethyl)-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.490 LC	5
43.		[(Octahydro-1-oxo-2-phenyl-5,8-methanoimidazo[1,5-a]pyridin-3-ylidene)amino]carbonitrile	2.357 LC	13

51.		(5α,8α,8αβ)-[[2-(3,5-Dichlorophenyl)octahydro-1-oxo-5,8-methanoimidazo[1,5-a]pyridin-3-ylidene]-amino]carbonitrile	3.413 LCMS	13
52.		(5α,8α,8α)-2-(3-Chloro-4-fluorophenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.863 LC	7
53.		(5α,8α,8αβ)-2-(3-Chloro-4-fluorophenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.007 LC	7
54.		(5α,8α,8αβ)-Tetrahydro-2-[4-nitro-3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.167 LCMS	7

Ex. No.	Compound Structure	Compound Name	Retention Time Min.	Procedure of Example
55.		(5α,8α,8aα)-Tetrahydro-2-[4-nitro-3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.047 LCMS	7
56.		(5α,8α,8aβ)-2-(3-Chloro-4-fluorophenyl)-8,8a-dihydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.920 LC	7
57.		(5α,8α,8aα)-2-(3-Chloro-4-fluorophenyl)-8,8a-dihydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.783 LC	7
58.		(5α,8α,8aα)-8,8a-Dihydro-8a-methyl-2-[4-nitro-3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.020 LC	20
59.		(5α,8α,8aβ)-4-(Octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-2-(trifluoromethyl)benzonitrile	3.107 LC	7
60.		(5α,8α,8aα)-4-(Octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-2-(trifluoromethyl)benzonitrile	3.030 LC	7
61.		(5α,8α,8aα)-4-(1,2,3,5,8,8a-Hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-2-(trifluoromethyl)benzonitrile	2.870 LC	20
62.		(5α,8α,8aβ)-2-Methoxy-4-(octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-1-naphthalenecarbonitrile	3.087 LC	7

Ex. No.	Compound Structure	Compound Name	Retention Time Min.	Procedure of Example
63.		(5α,8α,8α)-2-Methoxy-4-(octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-1-naphthalenecarbonitrile	2.827 LC	7
64.		[5S-(5α,8α,8αβ)]-Tetrahydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.980 LC	17
65.		[5S-(5α,8α,8αβ)]-Tetrahydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.850 LC	17
66.		[5R-(5α,8α,8αβ)]-4-(Octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-2-(trifluoromethyl)benzonitrile	2.920 LC	17
67.		[5S-(5α,8α,8αβ)]-Tetrahydro-2-[4-nitro-3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.250 LC	17
68.		[5S-(5α,8α,8αβ)]-Tetrahydro-2-[4-nitro-3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.120 LC	17
69.		[5S-(5α,8α,8αβ)]-4-(Octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-2-(trifluoromethyl)benzonitrile	3.050 LC	17
70.		[5S-(5α,8α,8αβ)]-4-(Octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-2-(trifluoromethyl)benzonitrile	2.940 LC	17

Ex. No.	Compound Structure	Compound Name	Retention Time Min.	Procedure of Example
71.		[5R-(5α,8α,8αβ)]-4-(Octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-2-(trifluoromethyl)benzonitrile	3.043 LC	17
72.		[5R-(5α,8α,αα)]-Tetrahydro-2-[4-nitro-3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.110 LC	17
73.		[5R-(5α,8α,8αβ)]-Tetrahydro-2-[4-nitro-3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.213 LC	17
74.		(5α,8α,8αα)-2-(3-Chlorophenyl)-8,8a-dihydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.650 LC	17
75.		Tetrahydro-2-(1-naphthalenyl)-5,8-ethanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	3.060 LC	8
76.		[5S-(5α,8α,8αα)]-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.943 LC	7
77.		(5α,8α,8αα)-8,8a-Dihydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.750 LC	7
78.		(5α,8α,8αα)-4-(Octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-1-naphthalenecarbonitrile	2.63 LC	17

Ex. No.	Compound Structure	Compound Name	Retention Time Min.	Procedure of Example
79.		(5α,8α,8aβ)-4-(Octahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-1-naphthalenecarbonitrile	2.77 LC	17
80.		(5α,8α,8aβ)-Tetrahydro-2-(1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.73 LC	17
81.		(5α,8α,8aα)-Tetrahydro-2-(1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.58 LC	17
82.		(5α,8α,8aα)-2-(4-Fluoro-1-naphthalenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H, 5H)-dione	2.80 LC	17
83.		(5α,8α,8aβ)-2-(4-Fluoro-1-naphthalenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H, 5H)-dione	2.81 LCMS	17
84.		(5α,8α,8aβ)-2-(4-Chloro-1-naphthalenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H, 5H)-dione	3.18 LC	17
85.		(5α,8α,8aα)-2-(4-Chloro-1-naphthalenyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H, 5H)-dione	3.09 LC	17
86.		(5α,8α,8aα)-8,8a-Dihydro-2-(1-oxidobenzo[b]thiophen-3-yl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.900 LC	17
87.		(5α,8α,8aα)-4-(1,2,3,5,8,8a-Hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyridin-2-yl)-1-naphthalenecarbonitrile	2.57 LC	17

Ex. No.	Compound Structure	Compound Name	Retention Time Min.	Procedure of Example
88.		(5α,8α,8aα)-Tetrahydro-2-[4-(1H-tetrazol-5-yl)-1-naphthalenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione	2.52 LCMS	17

Example 89

(1S-exo)-2,5-Diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester & (1S-endo)-2,5-Diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester.

5

This example illustrates a preferred method for obtaining a compound of formula IIa, which compound is useful as an intermediate in the preparation of compounds of formula I (see, for example, Figure 2 herein).

10

A (2S-trans)-4-Hydroxy-2-[[[(1,1-dimethylethyl)dimethylsilyl]oxy]methyl]-1-pyrrolidinecarboxylic acid, 1,1-dimethylethyl ester (89A)

15

N-(tert-butoxycarbonyl)-L-4-hydroxyproline (10.0 g, 43.3 mmol) was dissolved in THF and cooled to 0°C. Borane/THF (1.0 M solution, 86.6 mL) was then added over a 15 min period. The reaction was then warmed to 25°C followed by

heating to reflux for 16 h. The reaction flask was then removed from the heat source and anhydrous methanol (35 mL) was added slowly. After cooling to 25°C, the solvent was removed *in vacuo* and the resulting crude diol intermediate was taken on directly. The crude diol (1.81 g, 8.34 mmol) was dissolved in methylene chloride (50 mL), 2,6-lutidine (1.46 mL, 12.51 mmol) was added and the mixture was cooled to -78°C. *tert*-Butyl dimethylsilyltrifluoro-methanesulfonate (1.92 mL, 8.34 mmol) was then added. After 2h, the mixture was poured into 1 N HCl (100 mL), extracted with methylene chloride (2 x 100 mL) and the organics were dried over anhydrous sodium

25

sulfate. The resulting crude alcohol was purified by flash chromatography on SiO_2 eluting with acetone in chloroform (0-5-10% acetone) to give 1.011 g (37% for 2-steps) of the Compound 89A as a clear oil.

5 B. (2S-trans)-2-Hydroxymethyl-4-[[[(4-methylphenyl)sulfonyl]oxy]-1-pyrrolidinecarboxylic acid, 1,1-dimethylethyl ester (89B)

- Intermediate Compound 89A (3.41 g, 10.3 mmol) was dissolved in anhydrous
 10 pyridine (30.0 mL) and cooled to 0°C. p-Toluenesulfonylchloride (5.89 g, 30.9 mmol) was then added in portions over a 10 minute period. The flask was then placed in a refrigerator at 4°C for 48 h. The resulting solution was poured into 1 N HCl (300 mL), extracted with methylene chloride (3 x 200 mL) and the organics were dried over anhydrous sodium sulfate. The crude tosylate intermediate was dissolved in
 15 THF (50 mL), to which was added H_2O (0.5 mL) followed by pTSA- H_2O (1.03 mmol). Once the reaction was complete as determined by TLC, the mixture was poured into saturated aqueous NaHCO_3 (150 mL) and extracted with methylene chloride (3 x 50 mL). The combined organics were dried over sodium sulfate. The crude alcohol was purified by flash chromatography on SiO_2 eluting with
 20 acetone/chloroform (0-5-10% acetone) to give 2.71 g (71% for 2-steps) of intermediate Compound 89B as a clear oil.

C. (2S-trans)-2-[Cyano[(phenylmethyl)amino]methyl]-4-[[[(4-methylphenyl)sulfonyl]oxy]-1-pyrrolidinecarboxylic acid, 1,1-dimethylethyl ester (89C)

25

To a solution of oxalyl chloride (2.0 M soln in CH_2Cl_2 , 2.82 mL) in CH_2Cl_2 (40 mL) at -78°C was added anhydrous dimethylsulfoxide (0.462 mL, 6.51 mmol). The mixture was allowed to stand for 15 min, after which a solution of Compound 89B (1.61 g, 4.34 mmol) in CH_2Cl_2 (10 mL) was slowly added. After an additional 30 min, triethylamine (1.81 mL, 13.02 mmol) was added and the reaction was slowly warmed to 0°C . The reaction was then quenched with H_2O (25 mL) and diluted with CH_2Cl_2 (100 mL). The mixture was then washed sequentially with 1 N HCl (1 x 100 mL), saturated aqueous NaHCO_3 (50 mL), and water (2 x 50 mL). The organics were dried over anhydrous sodium sulfate and the volatile organics removed *in vacuo*. The crude aldehyde intermediate (1.60 g, 4.34 mmol) was dissolved in THF (25 mL) and diethyl cyanophosphonate (90%, 0.95 mL, 5.64 mmol) was added followed by benzyl amine (1.23 mL, 11.3 mmol). After 2 h, the reaction was complete, as observed by TLC and the volatile organics were removed *in vacuo*. The crude reaction mixture was purified by flash chromatography on SiO_2 eluting with acetone/chloroform (0-2-3% acetone) to give 1.48 g (70%) of intermediate Compound 89C as a white solid. Compound 89C was determined to be a ~1:1 mixture of diastereomers by NMR spectroscopy.

D. (1S-endo)-6-Cyano-5-(phenylmethyl)-2,5-diazabicyclo[2.2.1]heptane-2-carboxylic acid, 1,1-dimethylethyl ester (89Di); (1S-exo)-6-Cyano-5-(phenylmethyl)-2,5-diazabicyclo[2.2.1]heptane-2-carboxylic acid, 1,1-dimethylethyl ester (89Dii)

Intermediate Compound 89C (1.48 g, 3.05 mmol) was dissolved in dichloroethane (25 mL) and diisopropyl ethylamine (1.45 mL) was added. The mixture was heated to 100°C in a sealed tube for 18 h. The volatiles were then removed *in vacuo* and the resulting crude material was purified by flash chromatography on SiO_2 eluting with acetone/chloroform (0-2-3% acetone), to yield a

mixture of intermediate Compound 89Di (0.591 g, 62%) and intermediate Compound 89Dii (0.370 g, 38%) as clear oils. Structural assignments for Compounds 89Di and 89Dii were made after NOE, COESY and DEPT NMR experiments.

5 E. (1S-endo)-5-(Phenylmethyl)-2,5-diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester (89E)

Intermediate Compound 89Di (0.400 g, 1.28 mmol) was dissolved in NaOMe (0.5 M, 12.8 mL) and heated to 60°C for 5 h. The reaction was cooled to 0°C and 3 N HCl (4.0 mL) was added slowly. After 2h at 0°C the reaction was poured into saturated aqueous NaHCO₃ (50 mL). The mixture was extracted with CH₂Cl₂ (3 x 50 mL) and the combined organics were dried over anhydrous sodium sulfate. The crude ester was purified by flash chromatography on SiO₂ eluting with chloroform/acetone (0-2-4% acetone) to give 0.320 g (0.92 mmol, 72%) of intermediate Compound 89E as a clear oil.

20 F. (1S-exo)-5-(Phenylmethyl)-2,5-diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester (89F)

Intermediate Compound 89Dii (0.400 g, 1.28 mmol) was dissolved in NaOMe (0.5 M, 12.8 mL) and heated to 60°C for 5 h. The reaction was cooled to 0°C and 3 N HCl (4.0 mL) was added slowly. After 2h at 0°C the reaction was poured into saturated aqueous NaHCO₃ (50 mL). The mixture was extracted with CH₂Cl₂ (3

x 50 mL) and the combined organics were dried over anhydrous sodium sulfate. The crude ester was purified by flash chromatography on SiO₂ eluting with chloroform/acetone (0-2-4% acetone) to give 0.290g (0.85 mmol, 66%) of intermediate Compound 89F as a clear oil.

5

G. (1S-endo)-2,5-Diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester (89G)

10

Intermediate Compound 89E (0.280 g, 0.81 mmol) was dissolved in absolute EtOH (10.0 mL) and Pd/C (10% Pd, 0.080 g) was added. An atmosphere of H₂ was introduced via a balloon and the reaction was stirred at 25°C for 20 h. The Pd was removed by filtration through celite followed by rinsing with EtOAc. The volatiles were removed *in vacuo* to give Compound 89G (0.205 g, 99%) as viscous yellow oil. Compound 89G was taken on directly without purification. MS(ES)=m/z 257.18 [M+H]⁺. HPLC RT = 1.223 min (95%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection).

20

H. (1S-exo)-2,5-Diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester (89H)

25

Intermediate Compound 89F (0.310 g, 0.89 mmol) was dissolved in absolute EtOH (10.0 mL) and Pd/C (10% Pd, 0.080 g) was added. An atmosphere of H₂ was introduced via a balloon and the reaction was stirred at 25°C for 20 h. The Pd was

removed by filtration through celite, followed by rinsing with EtOAc. The volatiles were removed *in vacuo* to give Compound 89H (0.210 g, 92%) as a viscous yellow oil. Compound 89H can be taken on directly without purification.

MS(ES)=m/z 257.16 [M+H]⁺ HPLC RT = 1.293 min (90%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection).

Example 90

10

[5S-(5 α ,8 α ,8 α)]-2-[4-Cyano-3-(trifluoromethyl)phenyl]hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazine-7(8H)-carboxylic acid, 1,1-dimethylethyl ester, (90i)

15

[5S-(5 α ,8 α ,8 β)]-2-[4-Cyano-3-(trifluoromethyl)phenyl]hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazine-7(8H)-carboxylic acid, 1,1-dimethylethyl ester, (90ii)

20

To a solution of 4-isocyanato-2-(trifluoromethyl)-benzonitrile (1.0 mmol) in toluene (4 mL) with activated 4Å MS (0.300 g) was added Compound 89G (0.220 g, 0.856 mmol) in toluene (6 mL). After 10 h at 25°C, DBU (0.166 mL, 1.11 mmol) was added and the reaction was heated at 81°C for 2 h. The reaction was then cooled to 25°C and poured into 1 N HCl (50 mL). The solution was then extracted with methylene chloride (3 x 30 mL) and the combined organics were dried over anhydrous sodium sulfate. The resulting crude material was purified by flash chromatography on SiO₂ eluting with acetone/chloroform (0-2-4-8% acetone) to give Compound 90i (0.155 g, 42%) MS (ES): m/z 437.09 [M+H]⁺. HPLC RT = 3.280 min (100%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection) and Compound 90ii (0.061 g, 16%) MS (ES): m/z

437.09 [M+H]⁺. HPLC RT = 3.133 min (100%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min; 220 nM detection); both as white foams.

5

Example 91

5S-(5 α , 8 α , 8 α)]-4-(Hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazin-2(3H)-yl)-2-(trifluoromethyl)benzonitrile (91)

10

The Compound 90i (0.115 g, 0.264 mmol) was dissolved in anhydrous methylene chloride (3 mL) and anhydrous TFA (1.0 mL) was added at 25°C. After 1 h, the reaction was concentrated *in vacuo* and the resulting residue was dissolved in methylene chloride and poured into saturated aq NaHCO₃. This solution was then extracted with methylene chloride (3 x 10 mL) and the combined organics dried over anhydrous sodium sulfate. This gave 0.089 g (97%) of free Compound 91 as a yellow solid. MS (ES): m/z 359.09 [M+Na]⁺. HPLC RT = 1.477 min (100%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection).

20

Example 92

(1R-endo)-2,5-Diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid,
2-(1,1-dimethylethyl) 6-methyl ester (92H) & (1R-exo)-2,5-Diazabi-
cyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester
(92I)

5

10

This example illustrates a preferred method for obtaining a compound of formula IIa, which compound is useful as an intermediate in the preparation of compounds of formula I (see, for example, Figure 2 herein).

15

A. (2R-cis)-4-Hydroxy-1,2-pyrrolidinedicarboxylic acid, 1-(1,1-dimethylethyl) 2-ethyl ester (92A)

20

Cis-4-hydroxy-D-proline (10.0 g, 131.1 mmol) was suspended in absolute EtOH (100 mL) and anhydrous HCl (g) was bubbled through the reaction until a homogenous solution resulted. This was left at 25°C for 1 h and then the volatiles organics were removed *in vacuo*. The resulting HCl salt was triturated with diethyl ether and filtered to give the crude ethyl ester as a white powder. The ethyl ester salt was used directly in the next reaction.

The salt (~12 g) was suspended in acetone and cooled to 0°C. 10% aq Na₂CO₃ (6.0 mL) was then added followed by BOC₂O (1.37 g, 6.29 mmol) and then the reaction was slowly warmed to 25°C. After 12 h, the reaction mixture was poured into water and extracted with methylene chloride (3 x 100

mL). The organics were then dried over anhydrous sodium sulfate and concentrated *in vacuo* to give the crude compound **92A** as a white powder. This material was taken on without further purification.

5 **B. (2R-trans)-4-[[[(4-Methylphenyl)sulfonyl]oxy]-1,2-pyrrolidine-dicarboxylic acid, 1-(1,1-dimethylethyl) 2-ethyl ester (92B)**

The crude compound **92A** (1.41 g, 5.44 mmol) was dissolved in THF (50 mL) and Ph_3P (1.86 g, 70.8 mmol) was added. The mixture was cooled to 0°C and DEAD (1.11 mL, 70.8 mmol) was added. After 15 min, methyl paratoluenesulfonate (1.32 g, 70.8 mmol) was then added and the solution was slowly warmed to 25°C. After 14 h, the reaction was concentrated *in vacuo* and purified by flash chromatography on silica eluting with acetone in chloroform (0 – 2– 3% acetone) to give 0.845 g of the desired compound **92B** as a yellow oil. HPLC RT = 3.373 min (95%) (YMC S5 ODS column, 4.6 X 50 mm; 10–90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection). This material was taken on without further purification.

20 **C. (2R-trans)-2-(Hydroxymethyl)-4-[[[(4-methylphenyl)sulfonyl]oxy]-1-pyrrolidinecarboxylic acid, 1,1-dimethyl ester (92C)**

25 The crude compound **92B** (5.50 g, 13.32 mmol) was dissolved in THF (150 mL) and cooled to 0°C. LiBH_4 (2.0 M in THF; 16.7 mL; 33.3 mmol) was then slowly added and the reaction was allowed to warm to 25°C slowly.

After 12 h, the mixture was cooled to 0°C and the reaction was quenched with water (10 mL) and then AcOH (2.0 mL). After 15 min, the solution was poured into sat NaHCO₃ and extracted with methylene chloride (3 x 50 mL) and the combined organics were dried over anhydrous sodium sulfate. This gave the crude compound 92C (3.91 g) as a yellow oil, which was taken on without purification. HPLC RT = 3.043 min (100%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection).

10 D. (2R-trans)-2-[Cyano[(phenylmethyl)amino]methyl]-4-[(4-methylphenyl)-sulfonyl]oxy]-1-pyrrolidinecarboxylic acid, 1,1-dimethylethyl ester (92D)

15 To a solution of oxalyl chloride (2.0 M soln in CH₂Cl₂, 2.82 mL) in CH₂Cl₂ (40 mL) at -76°C was added anhydrous dimethyl sulfoxide (0.402 mL, 6.51 mmol). The mixture was allowed to stand for 15 min, after which a solution of compound 92C (1.61 g, 4.34 mmol) in CH₂Cl₂ (10 mL) was slowly added. After an additional 30 min, triethylamine (1.81 mL, 13.02 mmol) was added and the reaction was slowly warmed to 0°C. The reaction was then quenched with H₂O (25 mL) and diluted with CH₂Cl₂ (100 mL). The mixture was then washed sequentially with 1 N HCl (1 x 100 mL), saturated aqueous NaHCO₃ (50 mL), and water (2 x 50 mL). The organics were dried over anhydrous sodium sulfate and the volatile organics removed *in vacuo*. The crude aldehyde intermediate (1.60 g, 4.34 mmol) was dissolved in THF (25 mL) and diethyl cyanophosphonate (90%, 0.95 mL, 5.64 mmol) was added followed by benzyl amine (1.23 mL, 11.3 mmol). After 2 h, the reaction was complete, as observed by TLC and the volatile organics were removed *in*

vacuo. The crude reaction mixture was purified by flash chromatography on SiO₂ eluting with acetone/chloroform (0-2-3% acetone) to give 1.48 g (70%) of intermediate Compound 92D as a white solid. Compound 92D was determined to be a ~1:1 mixture of diastereomers by NMR spectroscopy.

- 5
E. (1R-endo)-6-Cyano-5-(phenylmethyl)-2,5-diazabicyclo[2.2.1]heptane-2-carboxylic acid, 1,1-dimethylethyl ester (92Ei); (1R-exo)-6-Cyano-5-(phenylmethyl)-2,5-diazabicyclo[2.2.1]heptane-2-carboxylic acid, 1,1-dimethylethyl ester (92Eii)

10

- Intermediate compound 92D (1.48 g, 3.05 mmol) was dissolved in dichloroethane (25 mL) and diisopropyl ethylamine (1.45 mL) was added. The mixture was heated to 100°C in a sealed tube for 18 h. The volatiles were then removed *in vacuo* and the resulting crude material was purified by
15 flash chromatography on SiO₂ eluting with acetone/chloroform (0-2-3% acetone), to yield a mixture of intermediate compound 92Ei (0.591 g, 62%) and intermediate compound 92Eii (0.370 g, 38%) as clear oils. Structural assignments for Compounds 92Ei and 92Eii were made after NOE, COESY and DEPT NMR experiments.

20

- F. (1R-endo)-5-(Phenylmethyl)-2,5-diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester (92F)

Intermediate Compound **92Ei** (0.400 g, 1.28 mmol) was dissolved in NaOMe (0.5 M, 12.8 mL) and heated to 60°C for 5 h. The reaction was cooled to 0°C and 3 N HCl (4.0 mL) was added slowly. After 2 h at 0°C the reaction was poured into saturated aqueous NaHCO₃ (50 mL). The mixture was extracted with CH₂Cl₂ (3 x 50 mL) and the combined organics were dried over anhydrous sodium sulfate. The crude ester was purified by flash chromatography on SiO₂ eluting with chloroform/acetone (0-2-4% acetone) to give 0.320 g (0.92 mmol, 72%) of intermediate compound **92F** as a clear oil.

10 **G. (1R-exo)-5-(Phenylmethyl)-2,5-diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester (92G)**

Intermediate compound **92Eii** (0.400 g, 1.28 mmol) was dissolved in NaOMe (0.5 M, 12.8 mL) and heated to 60°C for 5 h. The reaction was cooled to 0°C and 3 N HCl (4.0 mL) was added slowly. After 2 h at 0°C the reaction was poured into saturated aqueous NaHCO₃ (50 mL). The mixture was extracted with CH₂Cl₂ (3 x 50 mL) and the combined organics were dried over anhydrous sodium sulfate. The crude ester was purified by flash chromatography on SiO₂ eluting with chloroform/acetone (0-2-4% acetone) to give 0.290 g (0.85 mmol, 66%) of intermediate compound **92G** as a clear oil.

25 **H. (1R-endo)-2,5-Diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester (92H)**

Intermediate compound 92F (0.280 g, 0.81 mmol) was dissolved in absolute EtOH (10.0 mL) and Pd/C (10% Pd, 0.080 g) was added. An atmosphere of H₂ was introduced via a balloon and the reaction was stirred at 25°C for 20 h. The Pd was removed by filtration through celite followed by rinsing with EtOAc. The volatiles were removed *in vacuo* to give compound 92H (0.205 g, 99%) as viscous yellow oil. Compound 92H was taken on directly without purification. MS(ES)=m/z 257.18 [M+H]⁺. HPLC RT = 1.223 min (95%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection).

I. (1R-exo)-2,5-Diazabicyclo[2.2.1]heptane-2,6-dicarboxylic acid, 2-(1,1-dimethylethyl) 6-methyl ester (92I)

Intermediate compound 92G (0.310 g, 0.89 mmol) was dissolved in absolute EtOH (10.0 mL) and Pd/C (10% Pd, 0.080 g) was added. An atmosphere of H₂ was introduced via a balloon and the reaction was stirred at 25°C for 20 h. The Pd was removed by filtration through celite, followed by rinsing with EtOAc. The volatiles were removed *in vacuo* to give compound 92I (0.210 g, 92%) as a viscous yellow oil. Compound 92I can be taken on directly without purification. MS(ES)=m/z 257.16 [M+H]⁺. HPLC RT = 1.293 min (90%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection).

Example 93

[5R-(5 α ,8 α ,8a α)]-4-[Octahydro-7-[(1,1-dimethylethoxy)carbonyl]-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazin-2-yl]-2-(trifluoromethyl)benzonitrile (93i)

5 **[5R-(5 α ,8 α ,8a β)]-4-[Octahydro-7-[(1,1-dimethylethoxy)carbonyl]-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazin-2-yl]-2-(trifluoromethyl)benzonitrile (93ii)**

10

To a solution of 4-isocyanato-2-(trifluoromethyl)-benzonitrile (1.0 mmol) in toluene (4 mL) with activated 4Å MS (0.300 g) was added Compound 92H or 92I (0.220 g, 0.856 mmol) (compounds epimerize to form same product) in toluene (6 mL). After 10 h at 25°C, DBU (0.166 mL, 1.11 mmol) was added and the reaction was heated at 81°C for 2 h. The reaction was then cooled to 25°C and poured into 1 N HCl (50 mL). The solution was then extracted with methylene chloride (3 x 30 mL) and the combined organics were dried over anhydrous sodium sulfate. The resulting crude material was purified by flash chromatography on SiO₂ eluting with acetone/chloroform (0-2-4-8% acetone) to give Compound 93i (0.155 g, 42%) MS (ES): m/z 437.09 [M+H]⁺. HPLC RT = 3.280 min (100%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection) and Compound 93ii (0.061 g, 16%) MS (ES): m/z 437.09 [M+H]⁺. HPLC RT = 3.133 min (100%) (YMC S5 ODS column, 4.6 X 50 mm; 10-90% MeOH/H₂O gradient, + 0.1% TFA; 4 mL/min, 220 nM detection); both as white foams.

Example 94

[5S-(5 α ,8 α ,8 $\alpha\alpha$)]Hexahydro-2-(4-nitro-1-naphthalenyl)-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazine-7(8H)-carboxylic acid, 1,1-dimethylethyl ester

(94)

5

Compound 89G (0.220 g, 0.856 mmol) was added to a suspension of freshly activated 4Å molecular sieves (0.300 g) in dry toluene (10.0 mL). To this mixture
 10 was added 4-nitronaphthal-1-isocyanate (0.214 g, 1.0 mmol). After stirring at 25°C for 14 h, DBU (0.166 mL, 1.11 mmol) was added and the reaction was heated at 80°C for 2 h. After 2 h, the reaction was cooled to 25°C and then poured into 1 N HCl (50 mL). This solution was extracted with methylene chloride (3 x 30 mL) and the combined organics were dried over anhydrous sodium sulfate. The crude material
 15 was purified by flash chromatography on silica eluting with 0-2-6% acetone in chloroform to give 0.211 g of compound 94 as a yellow foam. HPLC: 95 % at 3.130 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm). MS (ES): m/z 439.19 [M+H]⁺.

20

Example 95

[5S-(5 α ,8 α ,8 $\alpha\alpha$)]-Tetrahydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione (95)

Compound 94 (0.160 g, 0.37 mmol) was dissolved in methylene chloride (5.0 mL) and TFA (1.5 mL) was added at 25°C. After 1.5 h, the reaction was concentrated *in vacuo* and redissolved in methylene chloride. This solution was washed with sat aq NaHCO₃. The aqueous layer was
 5 extracted with methylene chloride (3 x 25 mL). The combined organics were then dried over anhydrous sodium sulfate. Concentration *in vacuo* gave 0.115 g of compound 95 as a yellow solid. HPLC: 93 % at 1.747 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min,
 10 monitoring at 220 nm). MS (ES): m/z 369.07 [M+MeOH]⁺.

Example 96

[5S-(5 α ,8 α ,8 α)]-7-[(4-Fluorophenyl)sulfonyl]tetrahydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione (96)

15 Compound 94 (0.025 g, 0.074 mmol) was dissolved in pyridine (0.5 mL) and then 4-fluorophenylsulfonyl chloride (0.028 g, 0.148 mmol) was added. After 16 h at 25°C, the reaction was concentrated *in vacuo*. The crude product was purified by
 20 flash chromatography on silica eluting with 5% acetone in chloroform to give 0.029 g of compound 96 as a yellow solid. HPLC: 99% at 3.107 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm), MS (ES): m/z 497.2 [M+H]⁺.

25

Example 97

(5 α ,8 α ,8 α)-2-(7-Fluoro-3-benzofuranyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione & (5 α ,8 α ,8 α)-2-(7-Fluoro-3-benzofuranyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (97Ei & 97Eii, respectively)

5

**A. 7-Fluoro-2-benzofurancarboxylic acid (97A)**

10 The reagents 3-fluorosalicylaldehyde (1.000 g, 7.14 mmol) and ethyl bromomalonate (1.900 g, 7.29 mmol) were reacted according to the procedure reported by Tanaka (*J. Am. Chem. Soc.* 1951, 73, 872) to yield 562 mg (44 %) of compound 97A.

15 B. 3-Bromo-7-fluorobenzofuran (97B)

Compound 97A (562 mg, 3.12 mmol) was subjected to decarboxylation under the conditions described by Tanaka (*J. Am. Chem. Soc.* 1951, 73, 872), followed by bromination and debromination in accordance with the procedures described by Mochida *et al.* (EP 355827 A2) to afford 186 mg (28 %) of compound 97B.

C. 7-Fluoro-3-benzofurancarboxylic acid (97C)

Compound **97B** (186 mg, 0.87 mmol) was subjected to lithiation followed by carboxylation, in accordance with the procedures described by Cugnon de Sévricourt *et. al.*, *Bull. Soc. Chim.* 144 (1977), to yielded 36 mg
5 (23 %) of compound **97C**.

D. 7-Fluoro-3-benzofurancarboxylic acid azide (97D)

To a solution of compound **97C** (36 mg, 0.20 mmol) in THF (2 ml) was
10 added, via syringe at ambient temperature, Et_3N (33 μl , 0.24 mmol) and DPPA (52 μl , 0.24 mmol). The resulting mixture was stirred for 2 h, at which time the reaction was quenched by the addition of H_2O (2 ml). The layers were separated and the aqueous layer was extracted with Et_2O (1 x 5 ml). The combined organic phases were dried over MgSO_4 and concentrated
15 under reduced pressure to leave a colorless residue which was purified by flash chromatography (silica gel, 0 to 5 % EtOAc in hexanes) yielding 36 mg (88 %) of compound **97D**.

E. (5 α ,8 α ,8 α)-2-(7-Fluoro-3-benzofuranyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione & (5 α ,8 α ,8 α)-2-(7-Fluoro-3-benzofuranyl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione (97Ei & 97Eii, respectively).

A solution of compound **97D** (36 mg, 0.18 mmol) in toluene (1.5 ml)
25 was heated to 95°C for 2 h. The reaction was cooled before 50 mg of freshly activated 4 Å mol sieves (powdered) and a solution of 2-azabicyclo[2.2.1]heptane-3-carboxylic acid, ethyl ester (32 mg, 0.19 mmol) in toluene (1.5 ml) were added. The resulting mixture was stirred overnight,

- 5 treated with DBU (30 μ l, 0.20 mmol) and heated to 85°C for 2 h. After cooling the material was filtered through Celite eluting with CH_2Cl_2 (50 ml), washed with 1N HCl solution (2 x 25 ml) and concentrated under reduced pressure. The remaining residue was purified by flash chromatography (silica gel, 20 to 5 % hexanes in CH_2Cl_2) to give 23 mg (44 %) of compound 97Ei together with 19 mg (36 %) of compound 97Eii as white solids. Compound 97Ei: HPLC: 100 % at 2.93 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm), MS (ES): m/z 301 $[\text{M}+\text{H}]^+$.
- 10 Compound 97Eii: HPLC: 100 % at 3.00 min (retention time) (YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm), MS (ES): m/z 301 $[\text{M}+\text{H}]^+$.

- The corresponding compounds where the 7-fluoro-3-benzofuranyl group is replaced with each of the following groups were also prepared: 2-methyl, 4,5,6,7-tetrafluoro-3-benzofuranyl, 3-benzofuranyl, 2-benzofuranyl, and 2-methyl-3-benzofuranyl.

Example 98

- 20 [5S-(5 α ,8 α , 8 α)]-2-[4-Cyano-3-(trifluoromethyl)phenyl]hexahydro-8a-methyl-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazine-7(8H)-carboxylic acid, 1,1-dimethylethyl ester (98)

- 25 Compound 90i (0.100 g, 0.229 mmol) was added to freshly prepared LDA (0.048 mL diisopropyl amine, 0.186 mL, 1.6M BuLi) in THF (3.0 mL) at -78°C. After 30 min, methyl iodide (0.029 mL, 0.458 mmol) was added and the reaction was slowly warmed to -20°C over 1 h and then quenched with

sat aq ammonium chloride. The mixture was then extracted with methylene chloride (3 x 30 mL). The organics were dried over anhydrous sodium sulfate and concentrated *in vacuo*, to give 0.077 g of the crude compound **98** which was taken on without purification. HPLC: 93 % at 3.243 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm), MS (ES): m/z 473.12 [M+NaH]⁺.

10

Example 99

[5S-(5 α , 8 α , 8a α)]-4-(Hexahydro-1,3-dioxo-8a-methyl-5,8-methanoimidazo[1,5-a]pyrazin-2(3H)-yl)-2-(trifluoromethyl)benzonitrile (99**)**

15 Compound **98** (0.070 g, 0.156 mmol) was dissolved in methylene chloride (2.0 mL) and TFA (0.75 mL) was added at 25°C. After 30 min, the reaction was quenched with sat aq NaHCO₃ and then extracted with methylene chloride (3 x 30 mL). The organics were then dried over anhydrous sodium sulfate and concentrated *in vacuo*. The crude material
20 was purified by preparative TLC eluting with 25% acetone in chloroform to give 0.031 g of compound **99** as a white solid. HPLC: 86% at 1.817 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm), MS (ES): m/z 351.15 [M+H]⁺.

25

Example 100**[5S-(5 α ,8 α ,8 α)]-7-Benzoyl-2-[4-cyano-3-(trifluoromethyl)phenyl]tetrahydro-5,8-methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione, (100)**

5

Compound 99 (0.023 g, 0.066 mmol) was dissolved in methylene chloride (2.0 mL) and then TEA (0.018 mL, 0.132 mmol) and 4-DMAP (cat) were added followed by benzoyl chloride (0.011 mL, 0.099 mmol). After 3 h, the reaction was concentrated *in vacuo* and then purified by preparative TLC on silica eluting with 7% acetone in chloroform to give 0.021 g of compound 100 as a white foam. HPLC: 100% at 2.927 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm), MS (ES): m/z 455.10 [M+H]⁺.

15

Example 101**[5S-(5 α ,8 α ,8 α)]-7-(4-Fluorobenzoyl)tetrahydro-2-(4-nitro-1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione (101)**

20

Compound 95 (0.077 g, 0.228 mmol) was dissolved in methylene chloride (2.0 mL) and TEA (0.127 mL, 0.912 mmol) and 4-DMAP (0.001 g) were added. The reaction was cooled to 0°C and 4-fluorobenzoylchloride (0.040 mL, 0.342 mmol) was added. The reaction was then slowly warmed to 25°C. After 3 h, the reaction was

25

diluted with methylene chloride (50 mL) and then washed successively with 1N HCl and sat aq NaHCO₃, then and dried over anhydrous sodium sulfate. The crude material was purified by preparative TLC on silica eluting with 5% acetone in chloroform to give 0.022 g of compound 101 as a yellow solid. HPLC: 100 % at 2.960 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm), MS (ES): m/z 461.07 [M+H]⁺.

Example 102

10 [5S-(5 α ,8 α ,8 α)]-2-(4-Cyano-1-naphthalenyl)tetrahydro-7-(5-isoxazolylicarbonyl)-5,8-methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione (102A), [5S-(5 α ,8 α ,8 α)]-2-(4-Cyano-1-naphthalenyl)hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazine-7(8H)-carboxylic acid, 4-fluorophenyl ester (102B), [5S-(5 α ,8 α ,8 α)]-2-(4-Cyano-1-
15 naphthalenyl)tetrahydro-7-[(1-methyl-1H-imidazol-4-yl)sulfonyl]-5,8-methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione (102C) & [5S-(5 α ,8 α ,8 α)]-2-(4-Cyano-1-naphthalenyl)-N-(4-fluorophenyl)hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazine-7(8H)-carboxamide (102D)

Solution Phase Library Synthesis

20

The below procedure is a general approach to the synthesis of compounds of formula I in a solution phase library format. A more detailed description of individual compounds made via this combinatorial approach follows.

25

A series of free amine starting materials, analogous to the structure of [5S-(5 α ,8 α ,8 α)]-Tetrahydro-2-(4-nitro-1-naphthalenyl)-5,8 methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione (0.05 mmol, prepared as described in Example 95) were dissolved in dichloromethane (1.5 mL) in a polystyrene tube with a coarse frit. N,N-(Diisopropyl)aminomethyl polystyrene (3.49 mmol/g, 60 mg) was then added to each reaction vessel followed by the addition of the desired acid chloride, isocyanate, chloroformate or sulfonyl chloride (0.10 mmol) in 0.5 mL dichloroethane by automated synthesizer.

30

The reaction vessels were shaken at 25°C for 24 h and then Tris-(2-Aminoethyl)amine Polystyrene HL (200-400 mesh, 3.3 mmol/g, 75 mg) was added to each reaction vessel and the vessels shaken again for 18 h at 25°C. The liquid from each tube was drained into pretared 2.5 ml STR tubes and the resin was rinsed with dichloromethane (3 x 0.25 mL). The pretared tubes were then concentrated and analyzed by analytical HPLC and LC-MS.

HPLC: (Phenomenex-Prime 5 μ C-18 column 4.6 x 50 mm eluting with 10-90% aqueous methanol over 4 minutes containing 0.1% TFA, 4 mL/min, monitoring at 220 nm).

A. [5S-(5 α ,8 α ,8a α)]-2-(4-Cyano-1-naphthalenyl)tetrahydro-7-(5-isoxazolylcarbonyl)-5,8-methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione (102A)

[5S-(5 α ,8 α ,8a α)]-4-(Hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazin-2(3H)-yl)-1-naphthalenecarbonitrile (0.030 g, 0.094 mmol) was dissolved in dichloromethane (2.0 mL) in a polystyrene tube with a coarse frit. N,N-(Diisopropyl)aminomethyl polystyrene (3.49 mmol/g, 65 mg) was then added to each reaction vessel followed by addition of isoxazolid chloride (0.025 g, 0.19 mmol). The tube was shaken at 25°C for 24 h and then Tris-(2-Aminoethyl)amine Polystyrene HL (200-400 mesh, 3.3 mmol/g, 75 mg) was added to the reaction vessel and it was shaken again for 18 h at 25°C. The liquid was drained into a pretared 2.5 ml STR tube and the resin was rinsed with dichloromethane (3 x 0.25 mL). Concentration *in vacuo* gave the crude compound 102A (0.058 g) as a yellow solid. No purification was necessary. HPLC: 100% at 2.237 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing

0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm). MS (ES): m/z 414.11 $[M+H]^+$.

- B. [5S-(5 α ,8 α ,8 α)]-2-(4-Cyano-1-naphthalenyl)hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazine-7(8H)-carboxylic acid, 4-fluorophenyl ester (102B)

- [5S-(5 α ,8 α ,8 α)]-4-(Hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazin-2(3H)-yl)-1-naphthalenecarbonitrile (0.030 g, 0.094 mmol) was dissolved in dichloromethane (2.0 mL) in a polystyrene tube with a coarse frit. N,N-(Diisopropyl)aminomethyl polystyrene (3.49 mmol/g, 65 mg) was then added to each reaction vessel followed by addition of 4-fluorophenylchloroformate (0.033 g, 0.19 mmol). The tube was shaken at 25°C for 24 h and then Tris-(2-Aminoethyl)amine Polystyrene HL (200-400 mesh, 3.3 mmol/g, 75 mg) was added to the reaction vessel and it was shaken again for 18 h at 25°C. The liquid was drained into a pretared 2.5 mL STR tube and the resin was rinsed with dichloromethane (3 x 0.25 mL). Concentration *in vacuo* gave crude compound 102B (0.053 g) as a yellow solid. No purification was necessary. HPLC: 93% at 2.987 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm). MS (ES): m/z 457.07 $[M+H]^+$.

- C. [5S-(5 α ,8 α ,8 α)]-2-(4-Cyano-1-naphthalenyl)tetrahydro-7-[(1-methyl-1H-imidazol-4-yl)sulfonyl]-5,8-methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione (102C)

[5S-(5 α ,8 α ,8 α)]-4-(Hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazin-2(3H)-yl)-1-naphthalenecarbonitrile (0.030 g, 0.094 mmol) was dissolved
 5 in dichloromethane (2.0 mL) in a polystyrene tube with a coarse frit. N,N-(Diisopropyl)aminomethyl polystyrene (3.49 mmol/g, 65 mg) was then added to each reaction vessel followed by addition of imidazolesulfonylchloride (0.034 g, 0.19 mmol). The tube was shaken at 25°C for 24 h and then Tris-(2-Aminoethyl)amine Polystyrene HL (200-400 mesh, 3.3 mmol/g, 75 mg) was added to the reaction vessel
 10 and it was shaken again for 18 h at 25°C. The liquid was drained into pretared 2.5 ml STR tube and the resin was rinsed with dichloromethane (3 x 0.25 mL). Concentration *in vacuo* gave the crude compound 102C (0.043 g) as a yellow solid. No purification was necessary. HPLC: 70 % at 1.603 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing
 15 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm). MS (ES): m/z 463.07 [M+H]⁺.

D. [5S-(5 α ,8 α ,8 α)]-2-(4-Cyano-1-naphthalenyl)-N-(4-fluorophenyl)hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazine-7(8H)-carboxamide (102D)
 20

[5S-(5 α ,8 α ,8a α)]-4-(Hexahydro-1,3-dioxo-5,8-methanoimidazo[1,5-a]pyrazin-2(3H)-yl)-1-naphthalenecarbonitrile (0.030 g, 0.094 mmol) was dissolved in dichloromethane (2.0 mL) in a polystyrene tube with a coarse frit. N,N-(Diisopropyl)aminomethyl polystyrene (3.49 mmol/g, 65 mg) was then added to each reaction vessel followed by addition of 4-fluorophenylisocyanate (0.026 g, 0.19 mmol). The tube was shaken at 25°C for 24 h and then Tris-(2-Aminoethyl)amine Polystyrene HL (200-400 mesh, 3.3 mmol/g, 75 mg) was added to the reaction vessel and it was shaken again for 18 h at 25°C. The liquid was drained into a pretared 2.5 ml STR tube and the resin was rinsed with dichloromethane (3 x 0.25 mL). Concentration *in vacuo* gave the crude compound 102D (0.058 g) as a yellow solid. No purification was necessary. HPLC: 100% at 2.890 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm). MS (ES): m/z 456.4 [M+H]⁺.

Example 103

[5S-(5 α ,8 α ,8a β)]-Tetrahydro-2-(4-nitro-1-naphthalenyl)-7-(phenylmethyl)-5,8-methanoimidazo[1,5-a]pyrazine-1,3(2H,5H)-dione (103)

The TFA salt of the compound 95 (0.010 g, 0.022 mmol) was dissolved in DMF (0.5 mL) followed by addition of K₂CO₃ (0.009 g, 0.088 mmol) and benzyl bromide (0.005 mL, 0.044 mmol). After 1 h, the DMF was removed *in vacuo* and the crude product was purified by flash chromatography on silica eluting with 5% acetone in chloroform. This gave 0.008 g of compound 103 as a yellow solid. Proton NMR showed an intact hydantoin ring system. HPLC: 100% at 2.280 min (retention time) (YMC S5 ODS column 4.6 x 50 mm, 10-90% aqueous methanol over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm), MS (ES): m/z 461.12 [M+H+MeOH]⁺.

Examples 104 to 199

- Additional compounds of the present invention were prepared by procedures analogous to those described above. The compounds of Examples 104 to 199 have the following structure (L is a bond):

- where G, X, the compound name, retention time, molecular mass, and the procedure employed, are set forth in Table 3. The chromatography techniques used to determine the compound retention times of Table 3 are as follows: LCMS = YMC S5 ODS column, 4.6 X 50 mm eluting with 10-90% MeOH/H₂O over 4 minutes containing 0.1% TFA; 4 mL/min, monitoring at 220 nm. LCMS* = YMC S5 ODS column, 4.6 X 50 mm eluting with 10-90% MeOH/H₂O over 2 minutes containing 0.1% TFA; 4 mL/min, monitoring at 220 nm. LC = YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% MeOH/H₂O over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm. The molecular mass of the compounds listed in Table 3 were determined by MS (ES) by the formula m/z.

Examples 200 to 217

Additional compounds of the present invention were prepared by procedures analogous to those described above. The compounds of

- 5 Examples 200 to 217 have the following structure (L is a bond):

where G, X, the compound name, retention time, molecular mass, and the procedure employed, are set forth in Table 4. The chromatography techniques used to

- 10 determine the compound retention times of Table 4 are as follows: LCMS = YMC S5 ODS column, 4.6 X 50 mm eluting with 10-90% MeOH/H₂O over 4 minutes containing 0.1% TFA; 4 mL/min, monitoring at 220 nm. LCMS* = YMC S5 ODS column, 4.6 X 50 mm eluting with 10-90% MeOH/H₂O over 2 minutes containing 0.1% TFA; 4 mL/min, monitoring at 220 nm. LC = YMC S5 ODS column 4.6 x 50 mm eluting with 10-90% MeOH/H₂O over 4 minutes containing 0.2% phosphoric acid, 4 mL/min, monitoring at 220 nm. The molecular mass of the compounds listed in Table 4 were determined by MS (ES) by the formula m/z.

217		CH ₂	(5 α ,8 α ,8 β)-2-(2,2-Dimethyl-2H-1-benzopyran-4-yl)tetrahydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione.	3.03 LC	7

Claims

We claim:

- 5 1. A compound of the following formula:

- 10 or a salt thereof, wherein the symbols have the following meanings and are, for each occurrence, independently selected:

G is an aryl or heterocyclo group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions;

E is $C=Z_2$, CR^7CR^7 , SO_2 , $P=OR^2$, or $P=OOR^2$;

- 15 Z_1 is O, S, NH, or NR^6 ;

Z_2 is O, S, NH, or NR^6 ;

A_1 is CR^7 or N;

A_2 is CR^7 or N;

Y is $J-J'-J''$ where J is $(CR^7R^7)_n$ and $n = 0-3$, J' is a bond or O, S, S=O, SO_2 , NH,

- 20 NR^6 , $C=O$, $OC=O$, $NR^1C=O$, CR^7R^7 , $C=CR^8R^8$, $R^2P=O$, $OPOOR^2$, OPO_2 ,

OSO_2 , $C=N$, $NHNH$, $NHNR^6$, NR^6NH , $N=N$, cycloalkyl or substituted

cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or

substituted heterocyclo or aryl or substituted aryl, and J'' is $(CR^7R^7)_n$ and $n = 0-3$, where Y is not a bond;

- 25 W is $CR^7R^7-CR^7R^7$, $CR^8=CR^8$, $CR^7R^7-C=O$, $NR^9-CR^7R^7$, $N=CR^8$, $N=N$, NR^9-NR^9 , cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted

cycloalkenyl, heterocyclo or substituted heterocyclo, or aryl or substituted aryl;

Q is H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl,

5 heterocycloalkyl or substituted heterocycloalkyl, arylalkyl or substituted arylalkyl, alkynyl or substituted alkynyl, aryl or substituted aryl, heterocyclo or substituted heterocyclo, halo, CN, $R^1OC=O$, $R^4C=O$, $R^5R^6NC=O$, $HOOCR^7R^7$, nitro, R^1OCH_2 , R^1O , NH_2 , $C=OSR^1$, SO_2R^1 or NR^4R^5 ;

10 M is a bond, O, CR^7R^7 or NR^{10} , and M' is a bond or NR^{10} , with the proviso that at least one of M or M' must be a bond;

L is a bond, $(CR^7R^7)_n$, NH, NR^5 or $N(CR^7R^7)_n$, where n = 0-3;

15 R¹ and R^{1'} are each independently H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl;

20 R² is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl;

25 R³ and R^{3'} are each independently H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN, hydroxylamine, hydroxamide, alkoxy or substituted alkoxy, amino, NR^1R^2 , thiol, alkylthio or substituted alkylthio;

30 R⁴ is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo,

- cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1$;
- 5 R^5 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;
- 10 R^6 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN , OH , OR^1 , $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;
- 15 R^7 and R^7 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN , OR^1 , nitro, hydroxylamine, hydroxylamide, amino, NHR^4 , NR^2R^5 , NOR^1 , thiol, alkylthio or substituted alkylthio, $R^1C=O$, $R^1OC=O$, $R^1NHC=O$, SO_2R^1 , SOR^1 , $PO_3R^1R^1$, $R^1R^1NC=O$, $C=OSR^1$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;
- 20 R^8 and R^8 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, nitro, halo, CN , OR^1 , amino, NHR^4 , NR^2R^5 ,
- 25 $PO_3R^1R^1$, $R^1R^1NC=O$, $C=OSR^1$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;
- 30 R^8 and R^8 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, nitro, halo, CN , OR^1 , amino, NHR^4 , NR^2R^5 ,

NOR¹, alkylthio or substituted alkylthio, C=OSR¹, R¹OC=O, R¹C=O,
R¹NHC=O, R¹R^{1'}NC=O, SO₂OR¹, S=OR¹, SO₂R¹, PO₃R¹R^{1'}, or SO₂NR¹R^{1'};

R⁹ and R^{9'} are each independently H, alkyl or substituted alkyl, alkenyl or substituted

alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted
5 cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or
substituted cycloalkylalkyl, cycloalkenylalkyl or substituted

cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or
substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR¹, R¹C=O,

R¹OC=O, R¹NHC=O, SO₂R¹, SO₂OR¹, or SO₂NR¹R^{1'}; and

10 R¹⁰ is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl

or substituted cycloalkenyl, heterocyclo or substituted heterocyclo,

cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or

substituted cycloalkenylalkyl, heterocycloalkyl or substituted

heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl,

15 CN, OH, OR¹, R¹C=O, R¹OC=O, R¹R^{1'}NC=O, SO₂R¹, SO₂OR¹, or

SO₂NR¹R^{1'};

with the provisos that:

where E is C=O, M and M' are both a bond, Z₁ is O, Q is H and A₁ and A₂ are CH: (i)

G-L- is not phenyl, 4-chlorophenyl or benzyl when W is -CH=CH- and Y is

20 -CH₂-CH₂-; (ii) G-L- is not phenyl when W is -CH=CH- or -CH₂-CH₂- and

Y is -CH₂-; (iii) G-L- is not phenyl, 4-methoxyphenyl, 4-chlorophenyl, or

(optionally substituted aryl)-(C₁-C₃)-alkyl-, when W and Y are

-CH₂-CH₂-; and (iv) G-L- is not 4-chlorophenyl or benzyl when W and Y are

phenylene;

25 where E is C=O, M and M' are both a bond, Z₁ is O, and A₁ and A₂ are CH: (i) G-L- is

not benzyl when Q is -CO₂CH₃, W is -CH=CH- and Y is -CH₂- or

-CH₂-CH₂-; and (ii) G-L- is not phenyl when Q is methyl, W is -CH=CH- and

Y is -CH₂-;

where E is C=S, M and M' are both a bond, Z₁ is O, Q is H, A₁ and A₂ are CH, W is

30 -CH=CH- and Y is -CH₂- or -CH₂-CH₂-, G-L- is not phenyl; and

where E is C=O, M and M' are both a bond, Z₁ is O, Q is H, Y is -CH₂-CH₂-, and W is -CH=CH- or -CH₂-CH₂-, G-L- is not 4-chlorophenyl (i) when A₁ and A₂ are C-CH₃; and (ii) when A₁ is C-isopropyl and A₂ is C-CH₃.

5 2. The compound of Claim 1 wherein

G is an aryl or heterocyclo group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions;

E is C=Z₂, CHR⁷, SO₂, P=OR², or P=OOR²;

Z₁ is O, S, or NR⁶;

10 Z₂ is O, S, or NR⁶;

A₁ is CR⁷;

A₂ is CR⁷;

Y is J-J'-J'' where J is (CR⁷R^{7'})_n and n = 0-2, J' is a bond or NH, NR⁶, C=O,

cycloalkyl, or cycloalkenyl, and J'' is (CR⁷R^{7'})_n and n = 1-2, where Y is not a

15 bond;

W is CR⁷R^{7'}-CR⁷R^{7'}, CR⁸=CR^{8'}, CR⁷R^{7'}-C=O, NR⁹-CR⁷R^{7'}, cycloalkyl or

cycloalkenyl;

Q is H, C₁₋₆ alkyl, alkyl substituted with one or more halogens, C₁₋₆ alkyl substituted with hydroxy, alkenyl, alkynyl, Cl, F, Br, I, arylalkyl or substituted arylalkyl,

20 CN, R¹OC=O, R⁴C=O, R⁵R⁶NC=O, HOCR⁷R^{7'}, R¹OCH₂, R¹O, NH₂, or NR⁴R⁵;

M is a bond or NR¹⁰, and M' is a bond or NR¹⁰, with the proviso that at least one of M or M' must be a bond;

L is a bond, (CR⁷R^{7'})_n, NH, or NR⁵ where n = 0-1;

R¹ and R^{1'} are each independently H, alkyl, perfluoroalkyl, cycloalkyl, heterocyclo,

25 cycloalkylalkyl, or heterocycloalkyl;

R² is alkyl, perfluoroalkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, or heterocycloalkyl;

R³ and R^{3'} are each independently H, alkyl, perfluoroalkyl, cycloalkyl, heterocyclo,

cycloalkylalkyl, heterocycloalkyl, Cl, F, Br, I, CN, alkoxy, amino, NR¹R²,

30 thiol, or alkylthio;

- R^4 is H, alkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1$;
- R^5 is alkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1$;
- 5 R^6 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR^1 , $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1$;
- 10 R^7 and R^7 are each independently H, alkyl, perfluoroalkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, aryl, arylalkyl, Cl, F, Br, I, CN, OR^1 , nitro, hydroxylamine, hydroxylamide, amino, NHR^4 , NR^2R^5 , NOR^1 , thiol, alkylthio, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1$;
- R^8 and R^8 are each independently H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN, OR^1 , amino, NHR^4 , NR^2R^5 , NOR^1 , alkylthio or substituted alkylthio, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1$;
- 15 R^9 and R^9 are each independently H, alkyl, alkenyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, aryl, arylalkyl, CN, OH, OR^1 , $R^1C=O$, $R^1OC=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$; and
- R^{10} is H, alkyl, cycloalkyl, heterocyclo, cycloalkylalkyl, heterocycloalkyl, aryl, arylalkyl, CN, OH, OR^1 , $R^1C=O$, $R^1OC=O$, $R^1R^1NC=O$, SO_2OR^1 , or $SO_2NR^1R^1$.
- 25

3. The compound of Claim 1, wherein

- G is an aryl or heteroaryl group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions with hydrogen, C_1 - C_3 alkyl, allyl or substituted allyl, alkynyl, Cl, F, Br, I, CN, $R^1C=O$, $R^1HNC=O$,
- 30

- $R^1R^2NC=O$, haloalkyl, C_1-C_3 hydroxyalkyl, $HO CR^3R^3$, nitro, R^1OCH_2 , R^1O , NR^4R^5 , or SR^1 ;
- E is $C=Z_2$, CHR^7 or SO_2 ;
- Z_1 is O, S, or NCN ;
- 5 Z_2 is O, S, or NCN ;
- A_1 is CR^7 ;
- A_2 is CR^7 ;
- Y is J, cyclopropyl, or cyclobutyl, where $J=(CR^7R^7)_n$ and $n=1-3$;
- W is $CR^7R^7-CR^7R^7$, $CR^8=CR^8$, $CR^7R^7-C=O$, cyclopropyl, or cyclobutyl;
- 10 Q is hydrogen, C_1-C_4 alkyl, alkynyl, Cl, F, Br, I, CN, $R^1OC=O$, $R^4C=O$, $R^5R^6NC=O$, haloalkyl, C_1-C_6 hydroxyalkyl, $HO CR^7R^7$, R^1OCH_2 , R^1O , NH_2 or NR^4R^5 ;
- M is a bond and M' is a bond;
- L is a bond, $(CR^7R^7)_n$, NH, or NR^5 , where $n=0-1$;
- R^1 and R^1' are each independently H, alkyl, cycloalkyl, heterocycloalkyl, or
- 15 perfluoroalkyl;
- R^2 is alkyl, cycloalkyl, heterocycloalkyl, or perfluoroalkyl;
- R^3 and R^3' are each independently H, alkyl, perfluoroalkyl, Cl, F, Br, I, CN, alkoxy, amino, NR^1R^2 , thiol, or alkylthio;
- R^4 is H, alkyl, cycloalkyl, heterocycloalkyl, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or
- 20 $SO_2NR^1R^1$;
- R^5 is alkyl, cycloalkyl, heterocycloalkyl, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1$;
- R^7 and R^7 are each independently H, alkyl, arylalkyl, heteroaryl, perfluoroalkyl, heteroarylalkyl, Cl, F, Br, I, CN, OR^1 , amino, NHR^4 , NR^2R^5 , NOR^1 , thiol, alkylthio, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1$; and
- 25 R^{10} is H, alkyl, cycloalkyl, heterocycloalkyl, aryl, heteroaryl, arylalkyl, CN, $R^1C=O$, $R^1R^1NC=O$, SO_2OR^1 , or $SO_2NR^1R^1$.

4. The compound of Claim 1, wherein

G is an aryl or heteroaryl group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions with hydrogen, C₁-C₃ alkyl, allyl or substituted allyl, alkynyl, Cl, F, Br, I, CN, R¹C=O, R¹HNC=O,

5 haloalkyl, C₁-C₃ hydroxyalkyl, HO-CR³R^{3'}, nitro, R¹OCH₂, R¹O, NR⁴R⁵, or SR¹;

E is C=Z₂;

Z₁ is O;

Z₂ is O or NCN;

10 A₁ is CR⁷;

A₂ is CR⁷;

Y is J, where J=(CR⁷R^{7'})_n and n = 1-3;

W is CR⁷R^{7'}-CR⁷R^{7'}, CR⁸=CR^{8'}, or CR⁷R^{7'}-C=O;

Q is hydrogen, C₁-C₄ alkyl, alkynyl, Cl, F, Br, I, CN, R⁴C=O, R⁵R⁶NC=O, haloalkyl,
15 C₁-C₆ hydroxyalkyl, HO-CR⁷R^{7'}, R¹OCH₂, R¹O, NH₂ or NR⁴R⁵;

M is a bond and M' is a bond;

L is a bond;

R¹ and R^{1'} are each independently H, alkyl, or perfluoroalkyl;

R² is alkyl, or perfluoroalkyl;

20 R³ and R^{3'} are each independently H, alkyl, perfluoroalkyl, Cl, F, Br, I, CN, alkoxy, amino, NR¹R², thiol, or alkylthio;

R⁴ is H, alkyl, R¹C=O, R¹NHC=O, or SO₂NR¹R^{1'};

R⁵ is alkyl, R¹C=O, R¹NHC=O, or SO₂NR¹R^{1'};

R⁷ and R^{7'} are each independently H, alkyl, arylalkyl, heteroaryl, perfluoroalkyl,

25 heteroarylalkyl, Cl, F, Br, I, CN, OR¹, amino, NHR⁴, NR²R⁵, NOR¹, R¹C=O, R¹NHC=O, or SO₂NR¹R^{1'}; and

R¹⁰ is H, alkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, CN, R¹C=O, R¹R^{1'}NC=O, or SO₂NR¹R^{1'}.

5. The compound of claim 1, wherein

G is an aryl or heterocyclo group, where said group is mono- or polycyclic,
and which is optionally substituted at one or more positions with

5 substituents selected from one or more of hydrogen, alkyl or
substituted alkyl, halo, heterocyclo, CN, nitro, or R¹O;

E is C=Z₂ or CHR⁷ where R⁷ is hydrogen;

Z₁ is O or S;

Z₂ is O, S, or NR⁶ where R⁶ is CN or phenyl;

10 A₁ is CR⁷ where R⁷ is hydrogen;

A₂ is CR⁷ where R⁷ is hydrogen;

Y is (CR⁷R⁷)_n and n = 1-2 where R⁷ and R⁷ are hydrogen;

W is CR⁷R⁷—CR⁸R⁸, CR⁸=CR⁸, or NR⁹—CR⁷R⁷ where R⁷, R⁷, R⁸ and R⁸ are
hydrogen;

15 Q is H, alkyl, alkenyl, arylalkyl or substituted arylalkyl;

M is a bond or NH and M' is a bond;

L is a bond;

R¹ and R¹ are each independently alkyl or substituted alkyl, heterocyclo or
substituted heterocyclo, aryl or substituted aryl, arylalkyl or substituted

20 arylalkyl; and

R⁹ is H, alkyl, alkenyl, arylalkyl, R¹C=O, R¹OC=O, R¹NHC=O, or SO₂R¹.

6. A compound of claim 1 selected from the group consisting of:

(5α,8α,8 αα)-8,8a-Dihydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-

25 a]pyridine-1,3(2H,5H)-dione; (5α,8α,8 αα)-2,3,8,8a-Tetrahydro-2-[3-
(trifluoromethyl)phenyl]-3-thioxo-5,8-methanoimidazo[1,5-a]pyridin-1(5H)-one;

(5α,8α,8 αα)-8,8a-Dihydro-8a-methyl-2-[3-(trifluoromethyl)phenyl]-5,8-
methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione; (5α,8α,8 αα)-2,3,8,8a-
Tetrahydro-8a-methyl-3-thioxo-2-[3-(trifluoromethyl)phenyl]-5,8-

30 methanoimidazo[1,5-a]pyridin-1(5H)-one; (5α,8α,8 αα)-2,3,8,8a-Tetrahydro-2-(1-

- naphthalenyl)-3-thioxo-5,8-methanoimidazo[1,5-a]pyridin-1(5H)-one; (5 α ,8 α ,8 $\alpha\alpha$)-Hexahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1(5H)-one; (5 α ,8 α ,8 $\alpha\alpha$)-2-[3,5-Bis(trifluoromethyl)phenyl]-8,8a-dihydro-5,8-methanoimidazo[1,5-a]pyridin-1,3(2H,5H)-one; (5 α ,8 α ,8 $\alpha\alpha$)-8,8a-Dihydro-2-(2-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione; (5 α ,8 α ,8 $\alpha\alpha$)-8,8a-Dihydro-2-(1-naphthalenyl)-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione; (5 α ,8 α ,8 $\alpha\alpha$)-2-(3,5-Dichlorophenyl)-8,8a-dihydro-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione; [5S-(5 α ,8 α ,8 $\alpha\beta$)]-Tetrahydro-2-[3-(trifluoromethyl)phenyl]-5,8-methanoimidazo[1,5-a]pyridine-1,3(2H,5H)-dione;

7. A pharmaceutical composition comprising the following formula:

(I)

- 5 or a salt thereof, wherein the symbols have the following meanings and are, for each occurrence, independently selected:

G is an aryl or heterocyclo group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions;

E is $C=Z_2$, CR^7CR^7 , SO_2 , $P=OR^2$, or $P=OOR^2$;

- 10 Z_1 is O, S, NH, or NR^6 ;

Z_2 is O, S, NH, or NR^6 ;

A_1 is CR^7 or N;

A_2 is CR^7 or N;

Y is $J-J'-J''$ where J is $(CR^7R^7)_n$ and $n = 0-3$, J' is a bond or O, S, $S=O$, SO_2 , NH,

- 15 NR^6 , $C=O$, $OC=O$, $NR^1C=O$, CR^7R^7 , $C=CR^8R^8$, $R^2P=O$, $OPOOR^2$, OPO_2 , OSO_2 , $C=N$, $NHNH$, $NHNR^6$, NR^6NH , $N=N$, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo or aryl or substituted aryl, and J'' is $(CR^7R^7)_n$ and $n = 0-3$, where Y is not a bond;

- 20 W is $CR^7R^7-CR^7R^7$, $CR^8=CR^8$, $CR^7R^7-C=O$, $NR^9-CR^7R^7$, $N=CR^8$, $N=N$, NR^9-NR^9 , cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, or aryl or substituted aryl;

- 25 Q is H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocycloalkyl or substituted heterocycloalkyl, arylalkyl or substituted

arylalkyl, alkynyl or substituted alkynyl, aryl or substituted aryl, heterocyclo
or substituted heterocyclo, halo, CN, $R^1OC=O$, $R^4C=O$, $R^5R^6NC=O$,
 $HO-CR^7R^7$, nitro, R^1OCH_2 , R^1O , NH_2 , $C=OSR^1$, SO_2R^1 or NR^4R^5 ;

M is a bond, O, CR^7R^7 or NR^{10} , and M' is a bond or NR^{10} , with the proviso that at
5 least one of M or M' must be a bond;

L is a bond, $(CR^7R^7)_n$, NH, NR^5 or $N(CR^7R^7)_n$, where $n = 0-3$;

R^1 and R^1 are each independently H, alkyl or substituted alkyl, cycloalkyl or
substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo
or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl,
10 cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or
substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted
arylalkyl;

R^2 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or
substituted cycloalkenyl, heterocyclo or substituted heterocyclo,
15 cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted
cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or
substituted aryl, arylalkyl or substituted arylalkyl;

R^3 and R^3 are each independently H, alkyl or substituted alkyl, cycloalkyl or
substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo
20 or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl,
cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or
substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted
arylalkyl, halo, CN, hydroxylamine, hydroxamide, alkoxy or substituted
alkoxy, amino, NR^1R^2 , thiol, alkylthio or substituted alkylthio;

25 R^4 is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl
or substituted cycloalkenyl, heterocyclo or substituted heterocyclo,
cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted
cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or
substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$,

30 SO_2OR^1 , or $SO_2NR^1R^1$;

R^5 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;

R^6 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR^1 , $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;

R^7 and R^7 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN, OR^1 , nitro, hydroxylamine, hydroxylamide, amino, NHR^4 , NR^4R^5 , NOR^1 , thiol, alkylthio or substituted alkylthio, $R^1C=O$, $R^1OC=O$, $R^1NHC=O$, SO_2R^1 , SOR^1 , $PO_3R^1R^1$, $R^1R^1NC=O$, $C=OSR^1$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1$;

R^8 and R^8 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, nitro, halo, CN, OR^1 , amino, NHR^4 , NR^4R^5 , NOR^1 , alkylthio or substituted alkylthio, $C=OSR^1$, $R^1OC=O$, $R^1C=O$, $R^1NHC=O$, $R^1R^1NC=O$, SO_2OR^1 , $S=OR^1$, SO_2R^1 , $PO_3R^1R^1$, or $SO_2NR^1R^1$;

R^9 and R^9 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted

- cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR¹, R¹C=O, R¹OC=O, R¹NHC=O, SO₂R¹, SO₂OR¹, or SO₂NR¹R^{1'}; and
- R¹⁰ is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR¹, R¹C=O, R¹OC=O, R¹R^{1'}NC=O, SO₂R¹, SO₂OR¹, or SO₂NR¹R^{1'}; and a pharmaceutically acceptable carrier.

8. A pharmaceutical composition of Claim 7 further comprising another anti-cancer agent.

9. A method of modulating the function of a nuclear hormone receptor which comprises administering to a mammalian species in need thereof an effective nuclear hormone receptor modulating amount of a compound of the following formula I:

- or a salt thereof, wherein the symbols have the following meanings and are, for each occurrence, independently selected:

- G is an aryl or heterocyclo group, where said group is mono- or polycyclic, and which is optionally substituted at one or more positions;
- E is $C=Z_2$, CR^7CR^7 , SO_2 , $P=OR^2$, or $P=OOR^2$;
- Z_1 is O, S, NH , or NR^6 ;
- 5 Z_2 is O, S, NH , or NR^6 ;
- A_1 is CR^7 or N;
- A_2 is CR^7 or N;
- Y is $J-J'-J''$ where J is $(CR^7R^7)_n$ and $n = 0-3$, J' is a bond or O, S, $S=O$, SO_2 , NH , NR^6 , $C=O$, $OC=O$, $NR^1C=O$, CR^7R^7 , $C=CR^8R^8$, $R^2P=O$, $OPOOR^2$, OPO_2 , OSO_2 , $C=N$, $NHNH$, $NHNHNR^6$, NR^6NH , $N=N$, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo or aryl or substituted aryl, and J'' is $(CR^7R^7)_n$ and $n = 0-3$, where Y is not a bond;
- 10 W is $CR^7R^7-CR^7R^7$, $CR^8=CR^8$, $CR^7R^7-C=O$, $NR^9-CR^7R^7$, $N=CR^8$, $N=N$, NR^9-NR^9 , cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, or aryl or substituted aryl;
- 15 Q is H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocycloalkyl or substituted heterocycloalkyl, arylalkyl or substituted or substituted heterocyclo, halo, CN , $R^1OC=O$, $R^4C=O$, $R^5R^6NC=O$, $HO-CR^7R^7$, nitro, R^1OCH_2 , R^1O , NH_2 , $C=OSR^1$, SO_2R^1 or NR^4R^5 ;
- 20 M is a bond, O, CR^7R^7 or NR^{10} , and M' is a bond or NR^{10} , with the proviso that at least one of M or M' must be a bond;
- 25 L is a bond, $(CR^7R^7)_n$, NH , NR^5 or $N(CR^7R^7)_n$, where $n = 0-3$;
- R^1 and $R^{1'}$ are each independently H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or

substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl;

R^2 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo,

5 cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl;

R^3 and R^3' are each independently H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN, hydroxylamine, hydroxamide, alkoxy or substituted alkoxy, amino, NR^1R^2 , thiol, alkylthio or substituted alkylthio;

15 R^4 is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2OR^1 , or $SO_2NR^1R^1'$;

20 R^5 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1'$;

25 R^6 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1'$;

30 R^7 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^1'$;

substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR¹, R¹C=O, R¹NHC=O, SO₂R¹, SO₂OR¹, or SO₂NR¹R^{1'};

- 5 R⁷ and R^{7'} are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN, OR¹, nitro, hydroxylamine, hydroxylamide, amino, NHR⁴, NR²R⁵, NOR¹, thiol, alkylthio or substituted alkylthio, R¹C=O, R¹OC=O, R¹NHC=O, SO₂R¹, SOR¹, PO₃R¹R^{1'}, R¹R^{1'}NC=O, C=OSR¹, SO₂R¹, SO₂OR¹, or SO₂NR¹R^{1'};
- 10 R⁸ and R^{8'} are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, nitro, halo, CN, OR¹, amino, NHR⁴, NR²R⁵, NOR¹, alkylthio or substituted alkylthio, C=OSR¹, R¹OC=O, R¹C=O, R¹NHC=O, R¹R^{1'}NC=O, SO₂OR¹, S=OR¹, SO₂R¹, PO₃R¹R^{1'}, or SO₂NR¹R^{1'};
- 15 R⁹ and R^{9'} are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR¹, R¹C=O, R¹OC=O, R¹NHC=O, SO₂R¹, SO₂OR¹, or SO₂NR¹R^{1'}; and
- 20 R¹⁰ is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl,
- 25
- 30

CN, OH, OR¹, R¹C=O, R¹OC=O, R¹R^{1'}NC=O, SO₂R¹, SO₂OR¹, or
SO₂NR¹R^{1'}.

10. The method of Claim 9 wherein said nuclear hormone receptor is a
5 steroid binding nuclear hormone receptor.

11. The method of Claim 9 wherein said nuclear hormone receptor is the
androgen receptor.

10 12. The method of Claim 9 wherein said nuclear hormone receptor is the
estrogen receptor.

13. The method of Claim 9 wherein said nuclear hormone receptor is the
progesterone receptor.

15 14. The method of Claim 9 wherein said nuclear hormone receptor is the
glucocorticoid receptor.

20 15. The method of Claim 9 wherein said nuclear hormone receptor is the
mineralocorticoid receptor.

16. The method of Claim 9 wherein said nuclear hormone receptor is the
aldosterone receptor.

25 17. A method for treating a condition or disorder comprising administering
to a mammalian species in need thereof a therapeutically effective amount of a
compound of the following formula:

(I)

or a salt thereof, wherein the symbols have the following meanings and are, for each
 5 occurrence, independently selected:

G is an aryl or heterocyclo group, where said group is mono- or polycyclic, and which
 is optionally substituted at one or more positions;

E is $C=Z_2$, CR^7CR^7 , SO_2 , $P=OR^2$, or $P=OOR^2$;

Z_1 is O, S, NH, or NR^6 ;

10 Z_2 is O, S, NH, or NR^6 ;

A_1 is CR^7 or N;

A_2 is CR^7 or N;

Y is J-J'-J'' where J is $(CR^7R^7)_n$ and $n = 0-3$, J' is a bond or O, S, S=O, SO_2 , NH,

15 NR^6 , C=O, OC=O, $NR^1C=O$, CR^7R^7 , $C=CR^8R^8$, $R^2P=O$, $OPOOR^2$, OPO_2 ,
 OSO_2 , C=N, NHNH, $NHNR^6$, NR^6NH , N=N, cycloalkyl or substituted
 cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or

substituted heterocyclo or aryl or substituted aryl, and J'' is $(CR^7R^7)_n$ and $n =$
 0-3, where Y is not a bond;

W is $CR^7R^7-CR^7R^7$, $CR^8=CR^8$, $CR^7R^7-C=O$, $NR^9-CR^7R^7$, $N=CR^8$, N=N, NR^9-

20 NR^9 , cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted
 cycloalkenyl, heterocyclo or substituted heterocyclo, or aryl or substituted
 aryl;

Q is H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or
 substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl,

25 heterocycloalkyl or substituted heterocycloalkyl, arylalkyl or substituted
 arylalkyl, alkynyl or substituted alkynyl, aryl or substituted aryl, heterocyclo

or substituted heterocyclo, halo, CN, $R^1OC=O$, $R^4C=O$, $R^5R^6NC=O$,
 $HO-CR^7R^7$, nitro, R^1OCH_2 , R^1O , NH_2 , $C=OSR^1$, SO_2R^1 or NR^4R^5 ;
 M is a bond, O, CR^7R^7 or NR^{10} , and M' is a bond or NR^{10} , with the proviso that at
 least one of M or M' must be a bond;

5 L is a bond, $(CR^7R^7)_n$, NH, NR^5 or $N(CR^7R^7)_n$, where $n = 0-3$;

R^1 and $R^{1'}$ are each independently H, alkyl or substituted alkyl, cycloalkyl or
 substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo
 or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl,
 cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or
 10 substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted
 arylalkyl;

R^2 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or
 substituted cycloalkenyl, heterocyclo or substituted heterocyclo,
 cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted
 15 cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or
 substituted aryl, arylalkyl or substituted arylalkyl;

R^3 and $R^{3'}$ are each independently H, alkyl or substituted alkyl, cycloalkyl or
 substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo
 or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl,
 20 cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or
 substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted
 arylalkyl, halo, CN, hydroxylamine, hydroxamide, alkoxy or substituted
 alkoxy, amino, NR^1R^2 , thiol, alkylthio or substituted alkylthio;

R^4 is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl
 25 or substituted cycloalkenyl, heterocyclo or substituted heterocyclo,
 cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted
 cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or
 substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$,
 SO_2OR^1 , or $SO_2NR^1R^{1'}$;

30 R^5 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or
 substituted cycloalkenyl, heterocyclo or substituted heterocyclo,

cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, $R^1C=O$, $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^{1'}$;

- 5 R^6 is alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR^1 , $R^1C=O$,
 10 $R^1NHC=O$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^{1'}$;

R^7 and R^7 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted

- 15 cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, halo, CN, OR^1 , nitro, hydroxylamine, hydroxylamide, amino, NHR^4 , NR^2R^5 , NOR^1 , thiol, alkylthio or substituted alkylthio, $R^1C=O$, $R^1OC=O$, $R^1NHC=O$, SO_2R^1 , SOR^1 , $PO_3R^1R^{1'}$, $R^1R^{1'}NC=O$, $C=OSR^1$, SO_2R^1 , SO_2OR^1 , or $SO_2NR^1R^{1'}$;

- 20 R^8 and R^8 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl,
 25 arylalkyl or substituted arylalkyl, nitro, halo, CN, OR^1 , amino, NHR^4 , NR^2R^5 , NOR^1 , alkylthio or substituted alkylthio, $C=OSR^1$, $R^1OC=O$, $R^1C=O$, $R^1NHC=O$, $R^1R^{1'}NC=O$, SO_2OR^1 , $S=OR^1$, SO_2R^1 , $PO_3R^1R^{1'}$, or $SO_2NR^1R^{1'}$;

- R^9 and R^9 are each independently H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted
- 30 cycloalkenylalkyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or substituted

cycloalkenylalkyl, heterocycloalkyl or substituted heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl, CN, OH, OR¹, R¹C=O, R¹OC=O, R¹NHC=O, SO₂R¹, SO₂OR¹, or SO₂NR¹R^{1'}; and

R¹⁰ is H, alkyl or substituted alkyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl

5 or substituted cycloalkenyl, heterocyclo or substituted heterocyclo, cycloalkylalkyl or substituted cycloalkylalkyl, cycloalkenylalkyl or

substituted cycloalkenylalkyl, heterocycloalkyl or substituted

heterocycloalkyl, aryl or substituted aryl, arylalkyl or substituted arylalkyl,

CN, OH, OR¹, R¹C=O, R¹OC=O, R¹R^{1'}NC=O, SO₂R¹, SO₂OR¹, or

10 SO₂NR¹R^{1'};

wherein said condition or disorder is selected from the group consisting of proliferate

diseases, cancers, benign prostate hypertrophy, adenomas and neoplasies of

the prostate, benign or malignant tumor cells containing the androgen receptor,

heart disease, angiogenic conditions or disorders, hirsutism, ache,

15 hyperpilosity, inflammation, immune modulation, seborrhea, endometriosis,

polycystic ovary syndrome, androgenic alopecia, hypogonadism, osteoporosis,

suppressing spermatogenesis, libido, cachexia, anorexia, inhibition of

muscular atrophy in ambulatory patients, androgen supplementation for age

related decreased testosterone levels in men, cancers expressing the estrogen

20 receptor, prostate cancer, breast cancer, endometrial cancer, hot flushes,

vaginal dryness, menopause, amenorrhea, dysmenorrhea, contraception,

pregnancy termination, cancers containing the progesterone receptor,

endometriosis, cachexia, menopause, cyclesynchrony, meningioma, fibroids,

labor induction, autoimmune diseases, Alzheimer's disease, psychotic

25 disorders, drug dependence, non-insulin dependent Diabetes Mellitus,

dopamine receptor mediated disorders, congestive heart failure, dysregulation

of cholesterol homeostasis, and attenuating the metabolism of a

pharmaceutical agent.

30. 18. A method for the preparation of a compound of the following formula IIa:

where

BOC is *t*-butoxycarbonyl; and

- 5 Q is H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocycloalkyl or substituted heterocycloalkyl, arylalkyl or substituted arylalkyl, alkynyl or substituted alkynyl, aryl or substituted aryl, heterocyclo or substituted heterocyclo halo, CN, R¹OC=O, R⁴C=O, R⁵R⁶NC=O, HO-CR⁷R⁷, nitro, R¹OCH₂, R¹O, NH₂, C=OSR¹, SO₂R¹ or NR⁴R⁵;
- 10 comprising the steps of

(i) treating a compound of the following formula B:

- 15 with a reducing agent to reduce the carboxylic acid group to hydroxymethyl, followed by protection of said hydroxy to yield a compound of the following formula C:

20

where Pro1 is a hydroxyl protecting group;

(ii) protecting the unprotected hydroxyl group of the compound of formula C, followed by deprotection of Pro1-O- to form hydroxyl, yielding a compound of the following formula D:

where Pro₂ is a protecting group;

- 5 (iii) oxidizing the hydroxymethyl group of D, yielding an aldehyde of the following formula E:

- 10 (iii) treating E with benzylamine and diethyl cyanophosphonate, yielding a compound of the following formula F:

- 15 (iv) treating said compound of the formula F with a base with heating to yield a compound of the following formula G:

(v) treating said compound of the formula G with a base to convert the nitrile group to methoxycarbonyl yielding a compound of the following formula H:

5

and (vi) removing the benzyl group of said compound of the formula H to form said compound of the formula IIa, wherein, optionally, said compound of the formula H is contacted with a compound Q-X, where X is a leaving group or X is an electrophilic center which can react to form a group Q, prior to said removal to form compounds of the formula IIa where Q is other than hydrogen.

10

19. A compound of the following formula E:

15

20. A compound of the following formula F:

20

21. A compound of the following formula G:

5

22. A compound of the following formula H:

23. A compound of the following formula J:

where

Q is H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocycloalkyl or substituted heterocycloalkyl, arylalkyl or substituted arylalkyl, alkynyl or substituted alkynyl, aryl or substituted aryl, heterocyclo or substituted heterocyclo, halo, CN, R¹OC=O, R⁴C=O, R⁵R⁶NC=O, HO-CR⁷R⁷, nitro, R¹OCH₂, R¹O, NH₂, C=OSR¹, SO₂R¹ or NR⁴R⁵;

20

24. A compound of the following formula IIa

where

- Q is H, alkyl or substituted alkyl, alkenyl or substituted alkenyl, cycloalkyl or substituted cycloalkyl, cycloalkenyl or substituted cycloalkenyl, heterocycloalkyl or substituted heterocycloalkyl, arylalkyl or substituted arylalkyl, alkynyl or substituted alkynyl, aryl or substituted aryl, heterocyclo or substituted heterocyclo, halo, CN, $R^1OC=O$, $R^4C=O$, $R^5R^6NC=O$, $HO CR^7R^7$, nitro, R^1OCH_2 , R^1O , NH_2 , $C=OSR^1$, SO_2R^1 or NR^4R^5 .
